But beyond all this, which is obvious, something else is moving. Europe is again engaged in a hideous conflict for power. Stripped to its bones, today the quarrel is much the same. Dictators of Germany and Italy rise to power on opposition to communism, launched into their peoples by the dictator of Russia. Again the dictators are in conflict for power. Again France, a democracy, ties herself to the dictatorship in Russia. England becomes endangered should the dictators of Germany and Italy overwhelm France. And thus again begins this dreadful treadmill.

What is proposed? That we join to stop inevitable movements and readjustments of peoples; that we engage in ideological wars. Who will pay for it in blood and treasure? Our children.

In Europe they constantly use the word "power" in a connotation that is strange to many Americans. That is the "power" of peoples and over peoples. This "power" may be a political authority held in a man. It may be the "power" of a nation, the "power" of alliances, or the balance of "power." And they speak daily of international "power" politics. They often speak of it in terms of a game. They play "power politics" as sheer necessity for national defense, and they play it for national aggression.

I do not believe we should sit in that game, either in their interest or ours. Our idealism and our uncertainties of policy only befuddle the movements of expediency and delicate adjustments in which they are compelled to live. And our stakes are the lives of millions of sons of America. The stakes are another 25 years of hideous national impoverishment. The stakes are the progress of all mankind for half a century. The stakes may be the sinking of intellectual and spiritual liberty for a century to come.

The time may come when we could arbitrate the quarrels which arise in that game at some point before shooting begins. But if we sit in the game we shall never be arbitrator, and we may be drawn into the shooting.

And let me inject that Europe plays power politics against us. There is the instance of the European war debts to us. Part of the debt was for supplies and cash to carry on the war. From one-third to one-half of that debt, however, was material and money we supplied after the armistice to aid in reconstruction. At that time the war was won. We had no need in our own interest to loan another dollar. We settled the debts for much less than the full sum. The whole, including the reconstruction advances, has been repudiated.

I have no desire to recall these incidents. My purpose is to stir up reason among the American people against doing it again.

The dangers of our being dragged into war lie in these directions:

(1) Foreign propaganda to inflame our emotions and to mold our minds to war.

(2) Preachments of our own mistaken officials and citizens which, in effect, support these propagandas.

(3) Steps taken by our own Government which, while denying that they are intended to take us into war, yet entangle us with these very controversies, the end of which may be war.

If deliberate attack were made upon women and children, which modern airplanes and modern food blockade make possible, our indignation might not be restrained from action. Remember the part indignation over Belgium played in our entry into the last war.

And here we can examine one of the methods of power politics. That is propaganda. During the World War, propaganda was first developed into a national weapon no less potent than killing men. When peoples and governments believe that independence or their national survival or their possessions are at stake, they instantly justify untruth and lies as a part of national policies. When they weigh the sacrifice of their sons, then truth, honesty, tolerance, and justice are thrown to the winds if a lie will serve better.

The Great War was the first time in history when all the powerful agencies of publicity and manipulation of news were organized

without moral restraint under the genius of skilled men. There were built up a skill and a technique in front of which every citizen was helpless to know the truth. And since that time the radio has become an additional weapon.

We, ourselves, when we entered the war imitated the others. We created great propaganda agencies. The managers of them have since confessed frankly that they distorted fact and created news without truth. They built hate as well as altruism as a necessary emotional foundation of modern war. And no man dared question or answer under this fierce, organized condemnation.

There are certain types of propaganda in motion today which fertilize our soil for our entry into war. For instance, one of these volleys of propaganda asserts that a great war in Europe is inevitable. That is a half-truth. The set-up in Europe has made a general war inevitable every hundred years since the Romans kept the peace. And until mankind makes much greater progress it will continue to be inevitable. But the pounding in of that phrase is either sensational journalistic speculation or European propaganda of the preparatory type.

We are told that we must join in war or democracy will disappear from the earth. From the alliance of the democracies with several totalitarian states that ideological issue seems somewhat confused.

My sympathies are with the democracies. But the democracies of western Europe have the resources to defend themselves. They comprise great empires of hundreds of millions of people with all the resources needed to secure their defense. Whether they preserve their democracies is a question of their own will.

We are told that if they fall we shall be the next victim. I do not agree that they will fall. But if they do fall the exhaustion of the dictators will be such that these countries will leave us alone for a quarter of a century at least.

It is dinned in our ears that we shall inevitably be drawn into this inevitable war whether we like it or not. That just simply depends upon our own will to keep out.

And another form of war conditioning of the public mind is the firing of words by our Government officials at the nations we don't like. So long as we confine it to words, the dictators will fire back an equally insulting lot of words, and we wind up even. Soapbox oratory is the necessary equipment of modern dictators, and they excel. Only the really neutral nations could judge as to who wins in these jousts of billingsgate. But they build up hateful emotions both ways.

And that does not imply that we should ever neglect to express indignation at great wrong. But the terms we use are important if it is results we seek and not propaganda.

The second danger of war comes from the policies of our own Government. President Roosevelt has taken a seat at the table where power politics is being played. He has joined in the chessboard of Europe. He lines us up in the balance of power. It is said we can do this without joining in war.

It is said we will do something more than words and less than war. When we open fire on the front we are in the fight. The enemy will fire back with more than words. If the more than words fail to overcome him we have to go further. For then we have to win or be overcome on our side. Let nobody say that you can do such things without danger of war itself.

If the dictators believe we will stop short of war they will credit us with having small chips in this game. Their chips are soldiers and guns. If our partners believe our chips of more than words and less than war are valuable, it is because they believe that when we have exhausted these chips we will put our soldiers and guns into the game and they will edge us in.

And right before our eyes the game shifts. We were originally going to quarantine dictators and again save domecracy. Today we have two or three dictators on our team. We have had to drop the "democracy front" and "dictators" and talk of "aggressors." That only indicates how rapidly we can move from sheer idealism into combat.

And what profit it if, by our joining in war to extinguish these systems, we also lose our own American life? It is not alone the price of war we lose. But we can never go through another great war without becoming a totalitarian state in order to effectively fight such a war. When we have finished we shall not have established peace in the world. We shall have sacrificed liberty for generations in the United States.

America can be of service to the world. We can hold up the standards of decency in the world.

We should hold that the basis of international relations should not be force, but should be law and free agreement.

The greatest immediate service that we can render is to join in economic cooperation with other nations to relieve the economic pressures which are driving the world constantly to instability. A great part of these pressures for war are economic. The greatest healing force that could come to the world is prosperity. There is a vast field for American action which is free from political entanglements. We should resume the conferences which were started under such good auspices by our country in 1932.

But, far beyond that, we can hold the light of liberty alight on this continent. That is the greatest service we can give to civilization.

We as a people can keep out of war in Europe if we have the resolute will to do so. Our will can be weakened by propaganda. It can be insidiously undermined by sitting in the game of European power politics.

We hear much of laws that will preserve our neutrality. But the question is not legalisms. It is our will to stay out. Staying out is a matter of tactics and strategy almost as difficult as the strategy and tactics of war. And if there is not the adamant will to stay out, no amount of law can keep us out. The first thing required is vigorous, definite statement from all who have responsibility, both publicly and privately, that we are not going to war with anybody in Europe unless they attack the Western Hemisphere. The second thing is not to sit in this game of power politics.

These are the American policies that will make sure that we do not send our youth to Europe for war.

Amendments to Social Security Law

EXTENSION OF REMARKS

OF

HON. DAVID I. WALSH

OF MASSACHUSETTS

IN THE SENATE OF THE UNITED STATES

Thursday, July 6, 1939

ADDRESS BY HON. DAVID I. WALSH, OF MASSACHUSETTS, JULY 1, 1939

Mr. WALSH. Mr. President, I ask to have inserted in the Appendix of the CONGRESSIONAL RECORD a radio speech which I delivered Saturday, July 1, 1939, on the subject of amendments to the social-security law, and especially with relation to the amendments to the old-age retirement plan and amendments relating to benefits of the old-age assistance plan.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

Congress at the present session has been of virtually one mind on two important pieces of legislation of direct concern to almost every citizen. One was the bill containing certain important revisions of the Federal tax laws affecting business. This bill, whatever its shortcomings, was an important step in the right direction, and was passed by the House with but a single dissenting vote, and in the Senate, on final passage, no voice was raised in opposition.

The other is the bill containing certain important revisions of the Social Security Act. This has already passed the House with only two negative votes on the final roll call and is now pending in the Senate. I venture the prediction that when this bill amending the Social Security Act comes to final vote in the Senate it will be similarly unanimous.

The particular features of the pending amendments to the Social Security Act that I now desire to discuss are (1) amendments relating to old-age retirement plan which is in the nature of insurance, providing benefits derived from a tax imposed on the employer and employee; and (2) amendments relating to benefits called "old age assistance," which are paid from contributions made directly from the Federal and State treasuries, without any contributions by the individual recipients.

The amendments recently passed by the House and which the Senate is now considering are of twofold character and effect. One group of amendments is calculated to lighten the tax load with respect to the so-called pay-roll tax imposed to pay benefits under the old-age retirement plan, and the other group of amendments liberalize and broaden the benefit payments under the old-age retirement plan and bring forward their due date in certain categories. Another group of amendments increase the amount of authorized Federal contributions to the States for noncontributing old-age assistance, thereby making it possible for the States who administer this law to increase the present benefits.

Let me first discuss briefly the proposed changes respecting pay-roll taxes.

One pay-roll tax under the existing law is that paid one-half by the employer and one-half by the employee under the old-age retirement plan. It was designed to create a fund out of which the employee, upon his retirement at age 65, receives a monthly annuity for the remainder of his life. The present tax on this account is 2 percent, being 1 percent paid by the employer and 1 percent by the employee. But under existing law this tax is due to rise to 3 percent next year, equally divided between employer and employee, and increases to 4 percent in 1943, 5 percent in 1946, and 6 percent in 1949.

The House has voted to postpone for 3 years any increase in the present 2-percent rate. I have no doubt that the Senate will concur in this. These pay-roll taxes have been found already to be burdensome to both employer and employee, and the postponement proposed is most desirable. It is estimated that the result of this postponement will be to save employers and employees at least $275,000,000 next year, or a total of $825,000,000 in the 3-year period, which otherwise they would be required to pay into the Treasury in taxes for this fund.

I believe it is safe to anticipate that before 1943 arrives, Congress will take appropriate action to forestall the sharp jump in

this pay-roll tax from 2 to 4 percent which is now scheduled to take effect in 1943. However, we must always keep in mind that the benefits are measured by the tax levied and collected.

Let me now turn to the amendments in the other group—those which liberalize the benefits for both old-age retirement and old-age assistance.

One important and widely publicized amendment and one which meets with general approval, provides for commencing the payments under the old-age retirement plan next January instead of delaying the start until January 1, 1942, the date fixed in the existing social-security law. This means that persons now covered by the old-age retirement plan who have attained the age of 65 next January will commence to receive monthly benefit payments without further delay.

The amount of these payments is governed by the number of years which the individual, previous to the date of his retirement, had contributed to the fund through the pay-roll tax, and the amount of his wages against which this tax had been collected. But the minimum is $10 per month and the maximum $85 per month. The wife, under certain conditions, and the children under 18, are entitled to additional and supplementary benefit payments.

The liberalizing amendments which have been approved by the House and which I feel certain will be approved by the Senate, change the method of computation so as to increase the amount of the monthly payments which become payable to insured workers retiring in the early years of this new plan, also the amount payable to wives and dependent children. It also introduces a new feature labeled "survivor benefits" whereby, instead of the original lump sum payable in certain cases to the surviving widow or children at the date of the death of the insured husband, the widow, dependent children and dependent parents, will be entitled to a monthly payment.

This payment in the case of the widow will be three-fourths of the amount of her deceased husband's monthly benefit payment or prospective payment (in the cases where he died before reaching retirement age). The amount of the payment in the case of orphan children or dependent parents will be one-half.

It had been estimated that under the present law the average monthly benefit payment which would be payable in 1942 to those who had then reached retirement age but who obviously had been paying into the fund for only a few years would be about $17.50 per month. Under the proposed amendments, it is estimated, the single persons who retire next year will be entitled on the average to $25.85 per month and the married persons to $38.78 per month.

Viewed from the angle of the country as a whole, it is estimated that these old-age retirement monthly benefit payments during the next 5 years will aggregate $1,755,000,000 under the liberalized plan, whereas, without these amendments and under the present Social Security Act, these payments in the next 5 years would have been $1,200,000,000.

Time does not permit me to enumerate various other changes, including those relating to unemployment compensation, which are contained in the bill already passed by the House.

There is one other highly important and, I may say also, highly controversial aspect of this liberalization program which I wish to discuss briefly. It is the question of noncontributory old-age pensions.

It needs to be kept clearly in mind that the monthly benefit payments under the old-age retirement plan of which I have been speaking, and noncontributory old-age pensions, of which there is at present such widespread public discussion, are entirely different matters. The old-age retirement plan is in substance and effect an insurance plan operated by the Government. The benefits paid are the result of the premiums paid and the premiums are the pay-roll taxes.

Old-age pensions stand on an entirely different footing. Old-age pensions under the Social Security Act are described as "old-age assistance" and under the present law, the Federal Government reimburses the States for 50 percent of their assistance payments to the needy aged up to a maximum of $30 a month for each person aided. This means a Federal contribution of as much as $15 per month per person if the States match it dollar for dollar—less than that if the States pay less.

The House voted to raise the Federal contribution maximum to $20 per month, retaining the 50-50 requirement. That means a $40 per month maximum pension, but only if the States are willing and able to pay their one-half of this amount.

The fact is, however, that comparatively few States have matched the $15 per month per person which the Federal Government is willing to contribute. In California, for instance, the average payment per month per person is $32.47, which makes the State contribution more than the $15 the Federal Government contributes. In Massachusetts the average is $28.32 per month per person. The average throughout the Nation is $19.20. Some States, like Arkansas, have average payments of only $6.05 per month per person.

It is obvious, therefore, that there is great force in the contention that to raise the proffered contribution of the Federal Government from $15 to $20 per month on a 50-50 basis, results in no immediate increased benefit to those in need of old-age pensions, since the States not now able to match a $15-per-month offer cannot be expected to match a $20-per-month offer.

The House rejected proposals to enlarge the requirement for a 50-percent contribution by the States. One proposal was for the Federal Government to contribute outright the entire old-age assistance payments out of the Federal Treasury and to raise the necessary funds from a special consumption or gross income tax of 2 percent which embraces in part the principle of the Townsend plan.

What the Senate may do on this question of liberalizing the old-age pension provisions and increasing the amount of payments is difficult to prophesy. It will probably adopt the House provision for a Federal contribution of $20, instead of the present $15 contribution, and continue to require matching by the States.

The inadequacy of the present scale of old-age pensions is fully apparent. The impulse to generously meet this need is very strong. We must provide all that is reasonably necessary to at least afford the frugal comforts of life for the aged, many of whom are worn-out and infirmed by long years of ceaseless toil, and others suffering from a realization that they are a burden to their families and friends. Old-age assistance should prove a blessing and provide, hope, cheer, and comfort to the aged and transfer their status from dependency to one of dignity and independence.

The stumbling block is the equally apparent fact that the Federal Government is already paying out more money in almost every direction than it can afford—that the annual deficits have already reached staggering proportions and show no signs of diminishing—and that to increase the annual outgo without any offsetting increase in the Government's revenues is to further increase the peril of an ultimate financial collapse. As for myself, I believe that the curtailment of governmental expenses should be in the direction of not undertaking any new financial activities, desirable as they may be, and for reducing expenditures all along the line, other than the primary obligation of taking care of the unemployed, destitute, and aged.

The Right to Health—And How To Win It

EXTENSION OF REMARKS

OF

HON. ROBERT F. WAGNER

OF NEW YORK

IN THE SENATE OF THE UNITED STATES

Thursday, July 6, 1939

ADDRESS BY SURG. GEN. THOMAS PARRAN

Mr. WAGNER. Mr. President, I ask unanimous consent to have printed in the RECORD a very able address delivered by Surg. Gen. Thomas Parran on June 20, at the National Conference on Social Work in Buffalo, N. Y. The subject of the address is The Right to Health—And How To Win It.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

In 1932, in presenting the report of the New York State Health Commission, Franklin D. Roosevelt, then Governor, commented upon the preoccupation of State and local authorities with urgent relief demands to the neglect of the public health. He said: "We have been so busy bailing out the boat that we have not begun to calk up the seams."

In 1939, it still is true that as a Nation we have barely begun to calk up the seams against illness; that we have not provided everywhere for all the people the basic community health protection which is our first line of national defense; that we have fallen behind in our deficit of hospital beds and equipment which are the workshops for modern medicine; that we have not even put "medical relief" on a parity with other necessities of life to the dependent groups of our population. Some small measure of security has been provided for the aged and for the worker who is out of a job because the factory shuts down; as yet there is none for the medical needs of these same people who are out of a job because of illness or permanent disability. In fact, we have the anomaly in some States that a worker's unemployment insurance payments are cut off if he gets sick and thereby is unemployable.

To attain national health we need to do more than "to calk up the seams" by protecting against the hazard of sickness and ameliorating its effects. Health security is not enough. We must have it, but we must have also a fuller measure of health opportunity. We need to build in America a race of people more physically fit, better nourished, possessing those dynamic physical qualities necessary to competence, to joy in life and living, and to the maximum attainment of mental and spiritual development.

The national health program represents the most comprehensive approach ever made toward solving the diverse and serious problems retarding our Nation's health. It is the logical outgrowth of the first steps toward national health made possible by the Social Security Act, the National Cancer Institute Act, and the Venereal Disease Control Act.

Its first objective is to reduce drastically the volume of sickness and ill health by making available to all areas and all groups of

the population needing service the proven methods of prevention—prevention of deaths of mothers and babies; a Nation-wide attack on tuberculosis and the venereal diseases; promotion of industrial hygiene, with greatly intensified efforts toward control of the occupational diseases; the use of proven methods to lessen the burden of mental illness; and the practical eradication of malaria which lays such a heavy burden upon large areas of the South. Pellagra and hookworm disease should go completely. Pneumonia should be cured with serum and simple chemicals.

The modern physician makes increasing use of facilities for the diagnosis and treatment of disease which are most effectively supplied by hospitals. As a second objective, the national health program therefore provides aid for the construction and maintenance of hospitals, though only where needed, and for the support of existing hospitals, public and private alike, especially in the distressed and rural areas. Aid also would be given to construct diagnostic and health centers in sparsely settled areas remote from any hospitals, to provide for rural doctors the resources of modern medicine, the workshops they need, which, in addition, would serve as centers for rural public-health work.

The third objective is to reduce disability and lengthen life by more prompt and adequate medical care of the sick. Adequate medical treatment of communicable diseases is essential both as a safeguard to the patient and as a means of preventing spread. But a large volume of disability results from diseases which are not specifically preventable; in illness due to these causes competent medical treatment constitutes our sole resource to ameliorate suffering, to reduce disability, and promote recovery.

Fourth, through the proposal of temporary disability insurance, indirect health protection would be extended to the worker and his family by compensation for wages lost through nonindustrial sickness and accident causing temporary incapacity.

Finally, and most important, greater Federal effort is proposed for research that we may learn how to prevent and cure diseases not now controllable.

It is not proposed that the health and medical services of the country be federalized. The widest latitude would be left to the States in developing procedures and policies best adapted to their own needs. It is proposed that the Federal Government give grants-in-aid for health and medical care, to vary with the needs; the poorer States and the most needy communities receiving a larger proportion. The principle of grants-in-aid is such a well-established part of our governmental structure that it seems unnecessary before this audience for me to defend the principle.

I should like to point out, however, that there are more determining reasons for Federal assistance to the States in public health than in any other field of social endeavor. Disease germs, like forest fires, know no State lines. The means of disease spread are intensified by modern methods of transportation. Persons exposed to smallpox in Syracuse, N. Y., 2 weeks ago are spreading it in a dozen States today. The mayor of New York City has pointed out in testimony before a committee of the Congress last year that thousands of sick people, too ill to labor in the cotton or wheat fields because of the ravages of tuberculosis, come to New York in the hope of getting jobs which a half-sick person can do, or good hospital care, which New York has and many cities and States do not have.

The widening concept of public health has not yet been felt uniformly throughout the country. It is true that the general death rate and the death rates from many preventable causes were lower last year than ever before. This means only that we continue to measure by the yardsticks of the past. Each year medical science gives us additional knowledge with which to combat more effectively one after another disease. Moreover, the general rates are necessarily averages for the country as a whole. In these averages are obscured rates which are disgracefully high.

For example, although the death rate from tuberculosis has declined to approximately 50 per 100,000 last year and to seventh place as a cause of death among unskilled and semiskilled male workers in 10 States, deaths from tuberculosis are exceeded only by those from diseases of the heart. Again, in a group of 14 southern States in 1931–33, respiratory tuberculosis ranked third in importance as a cause of death among Negroes, but occupied eighth place among the white population.

A striking reduction has occurred in the mortality of infancy and childhood. In 1915, 100 infants of every 1,000 born alive died in the first year of life. The provisional infant mortality rate for 1938 was 51, but infant mortality rates of the order of 100 or more are common in many areas today.

The average infant born in 1938 had an estimated life expectancy of 62 years—a gain of almost 13 years since 1900. In the older age periods, however, the expectation of life has undergone no significant change in the present century. In 1900 a man attaining the age of 50 had an average of 21 years of life remaining; the present decade has brought little change in this figure.

The death rates alone you must remember are not a measure of national fitness. They do not reveal the estimated 250,000 people who are suffering from silicosis, nor the ninety to one hundred thousand cases of pellagra which occurred last year in the South, nor the recent epidemic of scurvy in Maine.

Less than a third of the counties and even a smaller proportion of the cities employ full-time, professional health officers without which no basic preventive work can be done. In urban areas of the country, the present ratio of public health nurses to population is approximately 1 to 4,500. In all rural areas, it is 1 to 10,000, but in rural areas of the south-central States, the ratio is 1 to 22,000 population. Yet a conservative estimate of 20 years ago specified 1 public health nurse to 2,000 persons to provide even the minimum service needed to protect health.

We have in this country some 160,000 physicians in active practice—an average of 1 physician to 807 persons. But in certain of the predominantly rural States—the Dakotas, Mississippi, North and South Carolina—each physician serves an average of 1,300 persons or more. In the whole State of Kentucky, 1 physician serves an average of 1,106 persons; but in 9 counties of the State, the average population per physician is 3,000 or more. And Kentucky is not an isolated example. These figures illustrate a general trend of physicians to concentrate in the large urban centers, already overcrowded but which, through their hospitals and clinics, offer opportunity for the application of modern medical technique.

Although the facts are clear regarding the hospital situation in the country, there is a wide difference of opinion concerning their interpretation. The Interdepartmental Committee has estimated that we need an additional 350,000 hospital beds during the next decade. On the other hand, it has been stated that an average of 195,674 beds in existing institutions are empty. I would point out first, that 80 to 85 percent bed occupancy is considered full capacity for general hospitals because of the necessary division of wards and sections by sex, disease, etc. For example, a temporary surplus of beds in the obstetrical ward cannot be used for the care of measles or scarlet fever. Medical and surgical conditions cannot be mixed. In some areas, the color division further complicates the problem.

The most determining reason for empty beds, however, is the lack of ability of patients to pay for hospital care. The data show that the public hospitals, which by and large are free, are more than filled to capacity, while private rooms in voluntary and proprietary hospitals remain empty. There is an anomalous situation in the fact that in many areas which have the lowest number of hospital beds per capita there is the highest percentage of unused beds; lack of money, not lack of patients, keeps them empty.

The national health program proposes to use public moneys—Federal, State, and local—to pay for the care of needy patients in existing public and private hospitals. Every available bed in every hospital with decent standards would be utilized before more hospitals would be built. Even when this is done, however, there still remains a need in many areas. In 1,338 counties containing about 17,000,000 people there is no registered hospital. Obviously each of these counties does not need a hospital. It is estimated, however, that we do need about 500 rural hospitals. Many of these would replace present tumble-down shacks. A mere statement of the number of hospitals does not indicate the standard of their facilities.

May I point out the situation regarding tuberculosis hospitals? The best authorities agree that 2 beds per annual death from tuberculosis is a minimum need. Yet 26 States have less than 1 bed for each annual death. In New York State there are 3.25 tuberculosis beds in the up-State area, of which 2.5 are publicly owned and operated. In making estimates as to needed tuberculosis hospital construction, the committee has proposed only to bring them up to the minimum standard of 2 beds per annual death—a total of 45,000.

There is wide variation among the States in facilities for institutional care of the mentally diseased. The State with the highest ratio of beds in proportion to population has 6.88 beds in mental institutions per 1,000 persons; the lowest ranking State has 1.96 beds per 1,000 population. A very simple formula was used in estimating the additional beds needed in mental institutions. In one-fourth of the States the existing accommodations in these institutions average 4.8 beds per 1,000 population or more. The committee estimated that 130,000 new beds would be required to bring the remaining States up to the standard of 4.8, which one-fourth of the States now meet or exceed.

In the case of local general hospitals the number of available beds varies among the States from 1.3 to 5.5 per 1,000 population. Professional judgment estimates that 180,000 additional beds in general hospitals will be required for all States to meet their demonstrated need. It may be true that there is an excess of hospital beds in some States or some parts of States. The difficulty is, however, that we may not move the beds and it is impracticable to move the patients over long distances.

I see no fundamental objection to including in a program of Federal action in the health field a provision authorizing assistance to construct or modernize voluntary nonprofit hospitals. It should be made clear also that in the discretion of the responsible State authorities, public funds should be available to pay for the care of needy patients in voluntary as well as in public hospitals. There has been built up in this country a magnificent system of voluntary and church hospitals. Every bed in these approved hospitals is needed for the care of patients.

As social workers you know the interrelationship between poverty and disease. No statistical study is needed to convince you that the sick are poor and the poor are sick; that in good times and bad sickness is an important factor in bringing self-supporting families to the relief level; that among the various causes of poverty sickness is the most easily preventable. Enough is known of the medical and health needs of the Nation to begin constructively to do some-

thing about them. There is little disagreement also as to the objectives. There is, however, lack of agreement as to the extent of Federal control and of Federal participation. On each of these points I have a very definite personal opinion.

How far should the Federal Government go in exercising control over State and local health programs? There need to be established minimum safeguards for the expenditure of Federal funds which insure not only honesty but thrift of administration. This implies an honest merit system for persons paid with Federal moneys. It implies that the methods proposed shall be reasonably appropriate for the ends in view.

The proportion of Federal aid should not be uniform among all the States. The greatest help should be given where the greatest need exists. The rate of Federal appropriation should not be in excess of the ability of a State to provide competent personnel, sound methods of administration insuring effective service of a high quality. The whole problem cannot be met overnight. It should be developed on an evolutionary basis with increasing appropriations as determined by the needs which are shown to exist from year to year.

To the extent that industry and economics provide a higher level of employment, a higher wage for the underprivileged, the need for public subsidies to supplement individual resources for medical care will be reduced. Yet even under anything on the horizon of an industrial and economic Utopia, there still will remain a considerable group of the population unable individually to pay all medical costs. We have accepted the principle that the necessities of life must be provided at public expense for those groups of the population unable individually to provide them. We have not yet given more than lip service to the fact that medical care is a necessity of life which likewise needs to be provided for those unable to secure it by their own efforts. At this point a further complication arises, created by medical science itself. By its very growth and competence, the complexity and therefore the cost of good medical care has been increased putting it beyond the reach of persons otherwise self-sustaining. Inherent in the problem, too, is the fact that we cannot foretell for a family when or how the blunderbuss of illness will strike. Its costs are unpredictable. One must use, therefore, a different yardstick in measuring the needs of people for medical care than that used for measuring their needs for food and shelter. This obvious fact creates an administrative difficulty for the public-welfare official to apply one means test for the accepted necessities of life and another test for medical service. Even though we accept the premise that public funds should assist the self-supporting persons in the marginal economic group in meeting their medical costs, the stigma of charity still attaches to such a service. Self-sustaining people are reluctant to subject themselves to a means test and public-welfare administrators find it difficult to use different kinds of yardsticks in giving various so-called benefits.

The Interdepartmental Committee defined as medically needy those persons with a total annual family income of less than $800. There are 40,000,000 such persons in the United States. It is evident that this entire group will not require medical care during a year. Almost one-half of them will experience no sickness. But the committee has estimated that about 8,000,000 cases of illness disabling for a week or more will occur in these low-income families, "and under the conditions prevailing in 1935, about 2,000,000 of these cases will receive no medical care."

Under various present schemes of giving medical care to those on relief through overcrowded clinics and doctors of the poor, we are providing a very poor type of service. Much of the opposition on the part of many people, doctors and patients alike, to any great extension of public medical service, arises because the public medical service now provided in so many communities is of such inferior quality. A similar distrust arises from the untrained, political health officer who still is cherished in so many of our communities.

In some townships, it has been the traditional custom to elect the most hard-boiled candidate as overseer of the poor and particularly if he lived on an impassable road and had no telephone. In the same way, many medical clinics and dispensaries have limited their clientele by the kind of service they give—overcrowded clinics, hurried attention, served by unpaid doctors who are prone to keep the free customers waiting while they make private calls.

The greatest contribution that you social workers can make to future sound progress in national health is by doing a better job in the provision of medical service for which you now are legally responsible.

Very unfortunately, I think, the most frequent headlines about the national health program have dealt with its cost. This cost was an estimate of the amount needed at the end of 10 years from all sources together—Federal, State, and local sources. Assuming the current level and distribution of family incomes, this total cost was estimated to be $840,000,000 per year. It is a large sum. To me it is more intelligible if I say that it amounts to a per capita daily expenditure of 1⅞ cents on the average for each of us. This emphasis upon cost has led to the belief that the attainment of national health was a matter of dollars and cents. Nothing could be further from the truth. Money is needed, yes; but more than money, there is needed sound planning and the integration of service at each level of government.

Although a first step toward coordination of Federal health services under one agency has been taken by the establishment of the Federal Security Agency, there still remains a large amount of administrative dispersion of responsibility among several unrelated agencies.

The first objective of a national health program should be to coordinate the work of the Federal health agencies. We can never attain national health and fitness simply by making money grants out of several Federal pockets with no correlation between them, no joint planning, no uniform standards and with diverse budgetary requirements, systems of reporting, and multiple field staffs dealing with the States and auditing accounts. Public health measures for the prevention of disease merge naturally with medical services for the diagnosis and treatment of sickness. Together they represent a unit service to the individual and the family.

Medical science is not static. Each year better medical weapons are forged. This makes it inevitable that medical practice similarly must be adapted to change. We need to accelerate the progress of medical discovery, to supplement dwindling philanthropic and private support for medical research and education. A sound pattern is already established under the National Cancer Institute.

Medical practice in 1915 was vastly different from that in the preceding generation. Medical practice of today is vastly different from what it was when I was graduated 24 years ago. So far as one can foretell, the major change in the future of medical practice will be an increased necessity for group cooperative action in the rendering of medical service no less than in payment for it. Technological advances have occurred in medicine which are comparable with those in industry. Good medical care necessitates the collaboration of many specialists with adequate and expensive equipment. No one person now can practice all branches of medical science because of the multiple skills required and the cost of the auxiliary services. Specialization in the future, therefore, is inevitable. Up to now it has not led to that degree of cooperation between groups of doctors. Merely to expose a patient to a doctor does not invariably mean good care. I mention this consideration because it has an important bearing on the development of a national health program. Any governmental effort tends to become standardized. In providing governmental support for medical service we must insure that we do not standardize and do not create vested interests which will resist future change. For example, under earlier voluntary health-insurance schemes in Great Britain, duplicating, competing, and expensive insurance societies were set up which made it impossible later for efficient administration to be provided under a compulsory scheme. Also the Krankenkassen in Germany have changed very little since Bismarck's time.

The need for flexibility and for widely different types of experimentation, to meet the diversity of conditions in various parts of the country, all provide strong arguments for the greatest freedom in the several States to develop their own programs under minimum Federal safeguards in order that we may learn by actual experience.

Objection has been raised to the national health program because under it Federal funds would assist States in providing medical care under a system of health insurance. I object to Federal dictation to the States or Federal coercion of the States as to how they shall finance their medical services, how they shall define the groups who are to be eligible for one or another type of service.

The national health program does not recommend a national system of compulsory health insurance nor does it require nor coerce the States to do so. Very wisely, I think, it leaves a decision as to whether or not health insurance should be adopted in any State to the State itself. Among other advantages of our system of government is the fact that it permits experimentation on a State basis so that through actual experience a sound answer can be found to vexing social problems. We need such experimentation on a State basis with methods of financing and methods of administering medical service for the low-income group in our population.

The present small amounts of Federal aid to public health have given great impetus to organized methods of livesaving throughout the country. Yet the basic health organization necessary for any progress has been set up in less than half of our counties. They need to be extended on a county or district basis to cover the country; their personnel needs to be increased, their efforts against major preventable causes of death need to be intensified. Our first task is to minimize the risk of illness, to reduce the amount. This is more important than spreading the costs. Yet I believe that group payment of the cost of medical care through taxation or insurance, or both, is an important factor in any complete national health program.

Our next task is to increase physical fitness through positive measures of hygiene. Of these, improved national nutrition may be of more lasting importance than a wider distribution of medical care. Improved housing, opportunity for healthful recreation, physical and health education, all have an essential place if we are to give the people the best opportunity for health. It should be possible by applying present knowledge to bring this Nation to a level of healthfulness far beyond anything we have ever known.

Through this city of Buffalo, the gateway to the West, our forefathers migrated to new frontiers seeking opportunity as well as

security. They hewed out a great empire from the riches of soil, forests, and mines. That frontier is gone, but another equally vast, equally rich, and more challenging confronts us today. It is the frontier of science. Pioneers are needed to put its knowledge to work, to adapt its treasures to our use. It offers untold opportunity to industry, to the conservation and development of our natural resources, to the production of power and more efficient transportation. But, most important of all, in one sector of it, medical science offers us opportunities for life and health, for the conservation and development of our most precious asset—the human resources of the Nation—if we but put its knowledge (this science) to work, wisely for the use of all.

Has the Tennessee Valley Authority Injured the Coal Industry?

EXTENSION OF REMARKS

OF

HON. CHARLES H. LEAVY

OF WASHINGTON

IN THE HOUSE OF REPRESENTATIVES

Thursday, July 6, 1939

Mr. LEAVY. Mr. Speaker, the facts contradict the charges that the Tennessee Valley Authority power program has damaged the coal industry or that it will materially injure it in the future. On the contrary, utilities in the four States in which T. V. A. power is sold have doubled their use of coal for generating electricity largely because of the increased demand for power. Moreover, the T. V. A. program demonstrates the possibilities of expanding use of electricity through low rates, which in turn should promote a greater use of coal.

Through acquisition of privately owned utility systems by public agencies the Authority is now on the verge of obtaining a market for substantially all the power to be produced by its systems of navigation and flood-control dams on the Tennessee River system. Even with the additional generating capacity which T. V. A. has made available in the region, the increasing demand for power is pressing closely upon the supply. It appears that the electric utility market for coal which has been developed in the area will continue to increase, except as private companies may install more hydro capacity or turn to other forms of fuel for generation.

Of more importance to the coal-mining industry than the electric utility market, which has been small in this area, should be the industrial development of the Tennessee Valley to which the Authority is contributing.

UTILITIES DOUBLE USE OF COAL

The predepression peak for generation of electricity in the United States, according to statistics of the Federal Power Commission, was 95,925,000,000 kilowatt-hours in 1929. In 1938 this had increased about 22 percent to 116,681,000,000 kilowatt-hours.

However, the use of coal in generating plants has failed to show the same degree of recovery and, in fact, has never regained the 1929 peak of 44,934,000 tons. Utility consumption of coal in 1938 was almost 5,000,000 tons less than in 1929. Even in 1937, when a new peak for electric generation in the United States was established, coal consumption was less than in 1929.

This is in contrast to the experience in the Tennessee Valley, where low-rate policies initiated by the T. V. A. and followed by privately owned public utilities have stimulated the demand for electric power. Generation of electricity in the four States in which T. V. A. power is principally sold—Alabama, Tennessee, Mississippi, and Georgia—has increased from 4,044,000,000 kilowatt-hours in 1929 to 6,391,000,000 kilowatt-hours in 1938, or about 58 percent.

Over the same period the amount of coal used for generation of power in these States grew from 334,000 tons in 1929 to 677,000 tons in 1938, an increase of practically 100 percent.

Figures on the actual and relative consumption of coal in the United States and in the four valley States since 1929 are shown in table I.

TENNESSEE VALLEY A HYDRO AREA

Even with the recent increase in use of coal, the electric industry in the Tennessee Valley has not furnished an important market for coal for years. The chief reliance over a long period has been privately generated hydro power. A trend toward hydro power began in 1925, and even in that year more than half of the power generated in the four States came from hydroelectric stations.

The swing toward water power may be illustrated in Alabama, where the Alabama Power Co. between 1925 and 1929 completed four hydroelectric plants with a total installed capacity of 324,000 kilowatts. During the time it completed only one steam station, of 60,000-killowatt capacity, which the Federal Trade Commission reported "was built primarily to be the first standby steam plant to go into service if a period of excessive drought or extraordinary demand occurs."

By 1928 hydroplants were furnishing almost nine-tenths of the electric power generated in the four States, and continued to do so until 1934. On the other hand, coal-generated power dwindled to less than 4 percent of the total in 1932 and 1933 and only in the last 2 years climbed back to more than 10 percent of the total because of the increased demand for electricity. The relationship between the various types of generation in these States is shown in tables II and III.

In terms of proportion of the total coal production in the four States the market for coal in the utility industry has been of even less significance. In 1929 steam-generating plants used less than 1½ percent of the coal produced in the four-State area, and not until 1936 did the proportion rise above 2 percent. In 1938 almost 4½ percent of the coal produced was used in generating electricity, as shown by table IV.

Of much greater importance than increased use of coal in this area which has always been predominantly hydro is the demonstration of the relationship between reduced cost of power and growth in use of electric power. During the past few years coal has furnished approximately one-half of the total electric-power requirements of the Nation, and many areas are chiefly dependent on coal for electric power. The coal industry might well weigh the effects on the utility market for coal which could be expected to follow a widespread reduction of rates throughout the country, and especially in those areas in which the chief reliance has been and must continue to be on fuel generation. So far as electricity markets are concerned, the interests of the coal industry lie in expansion of the use of power.

EFFECT OF THE T. E. P. PURCHASE

During the 12 months ending April 30, 1939, the Tennessee Valley Authority generated approximately 1,590,000,000 kilowatt-hours. The total generation for the fiscal year ending June 30, 1939, will be somewhat higher and will be more than double the amount generated during the 1938 fiscal year.

The Authority estimates that during the first year following the transfer of the Tennessee Electric Power Co. system to public ownership approximately 3,500,000,000 kilowatt-hours will be required to supply the demand for T. V. A. power.

J. A. Krug, chief power engineer of the Authority, testifying before a subcommittee of the House Committee on Military Affairs recently, stated that in his opinion the production of this amount of power probably would require the operation of the T. E. P. steam-generating plants at about the same rate as at present.

It is evident that the acquisition of the T. E. P. system by public agencies will not injure to any appreciable extent the utility market for coal in this area. Perhaps of even greater significance to the coal industry, however, is the fact that with this acquisition, together with purchase of electric facilities by public agencies in northern Alabama and northern Mississippi, the Authority will have acquired a market for substantially all of its firm power.

This means that the increased demand for power outside the areas in which T. V. A. power is marketed will have to be met by private utility generating installations. Present operation of steam plants indicates that coal may be expected to share in supplying the growing power needs of the region.

T. V. A. AND EMPLOYMENT

While electric utilities in the United States have furnished a relatively stable market for coal, and while the consumption of coal in generating electricity has actually increased in the T. V. A. region, the coal industry has lost some of its markets, chiefly in industry and railroads, with resulting unemployment among coal miners. Alternative fields of employment are necessary to take up the slack.

T. V. A. has taken up part of this slack in employment through the construction and operation of its dams, power plants, and transmission lines, and in its other activities. But the effect of T. V. A. upon employment cannot be measured by the number of men it employs directly. Much greater than the labor furnished by the T. V. A. is that required to produce, fabricate, and transport the materials and equipment needed for the construction of dams, substations, transmission lines, and rural distribution lines.

A clear example is furnished by the electric-appliance business stimulated by the availability of low-cost energy. During the year 1938, the average domestic user of T. V. A. power purchased nearly $47 worth of electric appliances from private appliance dealers, far exceeding the usual average purchases per customer. Appliance dealers in 1938 sold more than $2,000,000 worth of appliances to customers using power supplied by the Authority, not to speak of the sales of customers of privately owned public utilities which have reduced their rate schedules in this area. Over the past 3 years, residential consumers of T. V. A. power have bought almost $5,000,000 worth of appliances.

Of even greater significance from the standpoint of employment, however, may be T. V. A.'s contribution to increased industrial activity through the combination of cheap and abundant power and low-cost transportation on the river in an area abounding in natural resources. Striking evidence of what this may mean is shown in the electrochemical and electro-metallurgical fields, with the expansion of the plant of the Aluminum Co. of America in east Tennessee, the establishment of phosphate processing plants in middle Tennessee by the Monsanto Chemical Co. and the Victor Chemical Works, and the construction of a new plant for the Electro Metallurgical Co. now in progress near Muscle Shoals. Of particular interest to the coal industry is the establishment of the National Carbon Co. plant in middle Tennessee to provide electrodes for the electric furnace operations of the chemical companies. This plant not only contributes to employment, but provides for quantities of coal.

TABLE I.—*Relation of coal consumed in generating electric energy in the United States and in 4 States, 1929–38 (Alabama, Georgia, Mississippi, and Tennessee)*

Year	Coal consumed in generating electric energy, in thousands of tons		Percent of 1929 consumption of coal used in generating electric energy	
	United States	4 States	United States	4 States
1929	44,934	334	100.0	100.0
1930	42,910	228	95.5	68.3

New Hampshire Electric Rates

REMARKS

OF

HON. JOHN E. RANKIN

OF MISSISSIPPI

IN THE HOUSE OF REPRESENTATIVES

Thursday, July 6, 1939

Mr. RANKIN. Mr. Speaker, under the rules of the House, I cannot answer a United States Senator on this floor or refer to him by name, but I can answer the arguments and attacks made by a Member of another body on one of the greatest governmental agencies this Nation has ever created—the Tennessee Valley Authority.

The one State in this Union that pays the highest rates for electric light and power, with probably one exception, is the State of New Hampshire. If there are any people under the American flag who need protection from overcharges for electric energy, they are the people of New Hampshire.

Electric rates in that State, as I said, are among the highest in the Nation. The seven States with the highest electrical prices have substantially the same average residential rates, and New Hampshire is in this group. New Hampshire residential rates are 17 percent higher than those of Massachusetts and double those of the Pacific Northwest. This condition did not just happen. There is a cause. My purpose today is to point out the cause of this condition and to suggest remedies.

Nature is kind and compensating in the allocation of its resources. Sections of our country, rich in fuel supplies, generally are deficient in water power. Sections devoid of fuels generally have streams with abundant, well-sustained water power, though some times short on statesmanship.

New Hampshire, in common with the other upper New England States, is rich in water power and lacking in fuel. This water power is really the property of the people, but it has been appropriated by limited groups without the benefits of this resource being passed on to the people. This great natural resource can still be used for beneficial purposes without destruction of values if the proper approach is made toward a satisfactory solution of this problem.

DOMINANT COMPANIES

The State of New Hampshire, with a population of 465,300, has 135,500 electric consumers, or a healthy ratio of 3.4 to 1. Three private companies serve 75 percent of the State's population and dominate the electric-rate situation. Two of these companies were a part of the notorious Midwest empire of Samuel Insull, and the third is a part of the manipulated Associated Gas & Electric system. In all the territories where these systems operated, high rates were maintained by manipulation, misrepresentation, inflated valuations, and improper political influences. The methods of the manipulators of these systems were so general that informed people know that high rates connote malpractice. An analysis of these dominant systems furnishes an explanation of the high New Hampshire rate structures. Seventy-eight percent of the State consumers are home users; 12 percent intermediate and small-business customers; and 10 percent industries, large and small.

The two former Insull operating companies serving the State are the Public Service Co. of New Hampshire and the Twin State Gas & Electric. The debt of these two companies is, according to Moody, $46,839,671, or $409 per meter. On top of these two operating companies is the old National Light, Heat & Power Co., now in the process of liquidation. Another holding company on top of these operating companies is the New England Public Service Co., with defaulted dividends on a debt of $36,415,797, or $127 debt per meter.

Through this point of the chain the total debt per meter is the high figure of $536. Innocent investors hold $36,300,000 of defaulted paper of this New England holding company, which has paid no dividends since 1932. On top of this structure was the old Midwest Co. of Illinois, the Corporation Securities Co., and Insull Investors Trust. All of these top-heavy supercompanies had security issues running into billions of dollars. The Midwest security holders will lose 93 cents out of every dollar of investment. Corporation Securities, on top of all these holding companies, sold $115,000,000 of securities to innocent investors on a faked balance-sheet statement, when the major holding company was actually insolvent. The manipulators of this chain had to meet such high-fixed charges that high rates were necessary. These financial structures with their high rates were made possible by political intrigue. It is this mountain of debt, and dividend arrears, that is holding up progress.

During the Insull days the New Hampshire home owner paid 7.3 cents per kilowatt-hour and had a low monthly consumption of 36 kilowatt-hours per meter. At the end of 1937, the average rate was 5.61 cents and the consumption of 52 kilowatt-hours a month. This shows how little the rate-reduction progress has been since regulation was purchased. During the same period private plants, where public opinion took cognizance of actual costs, reduced rates to a point about 40 percent below New Hampshire levels. The Commonwealth & Southern, because of T. V. A. competition, made drastic rate cuts in Alabama, Tennessee, and Georgia, and in 4 years its gross revenues under the cuts jumped from $42,400,000 annually to $52,000,000.

After the Insull crash the control of the New England Public Service Co. passed to New York bankers to satisfy collateral bonds. Therefore, these properties were freed from the upper obligations and all the present debt is that which I have enumerated.

The third dominent company in the State is the New Hampshire Gas & Electric—an "Associated" company. The published balance sheets of this series of organizations are so manipulated that it is impossible to secure a fairly accurate determination on the New Hampshire debt per meter. However, it is certainly higher than $536. The combined debt ratio to earnings for the three dominant New Hampshire companies is from their published statements 7.2 to 1. This index under proper financing should be about 4 to 1, indicat-

ing a manipulated security value of about 80 percent higher than prudent values. No wonder New Hampshire's rates are high. The electric consumers of this State have been the victims of these manipulators.

OVERCHARGES

If the Tacoma rates were in effect in New Hampshire, the electric rate payers of that State would save annually in electric bills $5,270,300. The Tacoma rates have long been successfully maintained without one cent of subsidy. Under these low rates 82.3 percent of the cost of the entire plant has been paid for, leaving a present outstanding indebtedness of 17.7 percent of the plant's assets. Under T. V. A. rates the annual savings in New Hampshire would be $4,589,800.

The Power Trust and its political allies have spread so much misinformation throughout New England regarding T. V. A. yardstick rates, that in this discussion I will confine my remarks largely to other actual tested experience both under public and private management.

There are in the United States about 40 communities where the tested electric charges are favorably comparable to the T. V. A. yardstick rates. Outstanding examples are the private plants in Washington, D. C.; Cleveland and Cincinnati, Ohio. The private plant serving Montreal, Canada, has rates practically identical, in the usual consumption range, with the T. V. A. rates and the company's gross earnings have increased under such rates. The private company serving Ottawa, Canada, has for years had rates about 40 percent lower than the T. V. A. yardstick rates, and this company is in good financial condition. Buffalo and its surrounding territory, St. Louis, Mo.; Springfield, Ill.; Madison, Wis.; Covington, Ky.; Los Angeles; Seattle; and Akron, Ohio; and others have approached the yardstick rates under private management. All of these private situations resulted from an aroused public opinion. In each case the company found it good business to reduce rates, and to operate under a sound financial structure.

It is recognized that under New Hampshire conditions, increased consumption and rate reductions are closely interrelated—more so than the average. The plan of the private companies demands increased consumption before substantial rate reductions are given. Such a plan places the cart before the horse. Price determines volume. Cincinnati reached its present rate level under four substantial progressive residential reductions in 4 years' time. This 4-year reduction was almost equal to the present bill; or, in other words, the 1933 level was nearly cut in half. The promotional effect of a properly formed rate structure will restore earnings. This has been demonstrated time after time, both in this country and in Canada. The question is whether sufficient accurate information can be given to the people to arouse public opinion and force a planned rate reduction program. If it can, the State will be enriched, unemployment will be reduced, the old industrial activity restored, and the securities of the operating companies will be enhanced in value. It is easily possible under New Hampshire conditions to realize such an objective under a merchandising rate formula which will build business, be based on actual costs, and recognizes the social advantages of low-priced current.

NEW HAMPSHIRE'S ELECTRICAL STRUCTURE

New Hampshire has an installed generating capacity of 297,400 kilowatts, of which 79 percent is hydro, 20.6 percent steam, and 0.4 percent internal-combustion engines. Out of this total State capacity, 99.6 percent is owned by the private power companies, 0.1 percent is owned by manufacturing and mining enterprises, and 0.3 percent by municipalities.

In 1938 the hydro plants produced 696,298,000 kilowatt-hours, while the steam and internal-combustion plants produced only 38,229,000 kilowatt-hours. Hydro last year produced 95 percent of the electrical current manufactured in New Hampshire. The undeveloped water-power sites of New Hampshire are capable of producing 915,000,000 kilowatt-hours additional, or an amount one and a third greater than the present production. The net power exports of the State total 338,380,000 kilowatt-hours—after deducing interchange and imported power. This exported power represents 46 percent of the present production in the State.

The New Hampshire transmission systems are interconnected with the Maine systems, with relatively low capacity ties near Portsmouth and Conway, with the Vermont systems at 5 points, and with the Massachusetts systems at 13 points on the southern State line. This sizable volume of energy would not be exported with transmission costs added unless the delivered cost of this hydro energy was substantially below the production cost of the larger supersteam stations in the Boston area. This indicates a delivered cost for the Massachusetts exported current between 0.5 and 0.6 cents per kilowatt-hour.

The New Hampshire transmission system is not extensive. The average transmitted distances are short, the voltages low, and the existing lines are coincident with the comparatively high density population areas. One of these areas is south of an east and west line extending from Farmington to Bellows Falls. Another extends east from the Ayers Island plant to the Maine border. Another is in the north central portion of the State. This latter area is a narrow strip with fair population density extending from Littleton to Gorham. The other areas of the State with a thin population density, are not served from transmission. There is a 220-kilovolt double-circuit high-class line from Comerford station on the Connecticut River, extending north and south to the Boston area. This is solely an export line. The New York Journal of Commerce has published transmission maps of all the States, with the lines superimposed on population densities. A comparison of the New Hampshire map with other maps shows a very favorable and low-cost transmission lay-out. The three principal power companies had a transmission mileage of 1,223 miles—a low figure.

Last year's records of the Power Commission show that only 13,200 tons of coal and 65,700 barrels of oil were used in New Hampshire to produce electricity. This amount of fuel is so small that it would have no practical effect on the State's electric costs. New Hampshire is essentially a water-power State, and it seems a shame that this power cannot be wisely used to lower consumer costs. The outmoded rate schedules now in effect in New Hampshire cause short-hours use and attendant high rates. This results in the run of the river hydros wasting water and allowing it to flow to the sea unused. This wasted water could produce abundant electricity that could lower unit costs.

Existing rate schedules in the State are practically uniform. Manchester, with a population of 76,800, sells 100 kilowatt-hours for the same price as 24 communities with populations ranging from 1,000 to 2,500; 55 communities under 1,000 population are supplied with 100 kilowatt-hours for the Manchester price, a number of these having a population between 250 and 400. For the numerous small users—40 kilowatt-hours per month—the rates are the lowest in the small towns. This shows again that transmission costs in New Hampshire are relatively low. The size of the community has no effect on rates under the New Hampshire conditions. Existing rates is the best evidence obtainable on this point.

ELECTRIC COSTS

The over-all residential electric delivered cost depends on generating, transmission, distribution, and general over-all costs. I will cover each of these component cost items and present competent evidence to evaluate each, based on a 600-kilowatt-hour annual consumption. Generation, together with steam stand-by, represents about 20 percent of the delivered cost; transmission, 8 percent; and distribution and general, 72 percent. It is evident that the last item controls delivered cost.

GENERATION AND TRANSMISSION

An examination of the operating statements of some of the New Hampshire hydro plants points out that the bus bar generating cost in the newer large plants runs around 3 mills

per kilowatt-hour, and in the older and poorer plants about 6 mills per kilowatt-hour. Steam and engine installation in the State represents 21 percent of the total installed capacity. This is supplemental capacity, but by assuming that this is stand-by, I will resolve any doubt in favor of the operating companies. Adding together all the residential generating costs, both fixed and operating, for the hydro and steam plants, with losses, I arrive at an average annual customer cost of $4.08, or 6.8 mills per kilowatt-hour. This figure is in substantial agreement with the average reported costs of the companies operating in up-State New York and includes a 9-percent return on the hydros and a 11-percent return on the steam plants, and a 20-percent allowance for capacity reserve. The 1939 report of the New York Power Authority estimates this cost for upper New York State to be about 6.5 mills per kilowatt-hour. Here in Washington, D. C., the local company purchases Susquehanna hydro current delivered for 2 mills per kilowatt-hour. Steam production over-all costs here are 6.4 mills in the old Benning station and 4.48 mills in the New Buzzards Point station. Coal costs in Washington, delivered, $4.40 per ton and the coal cost of this Washington current at the Buzzards Point station is 1.95 mills per kilowatt-hour. On this basis with a mine-mouth plant and coal at $1.50 per ton the coal cost of the current would be 0.675 mill per kilowatt-hour. With $6 coal this current cost would be 2.7 mills per kilowatt-hour. The difference between $1.50 and $6 coal would amount to 12 cents per month or 4 percent on the average New Hampshire light bill. This shows that the production figure used is conservative and could be in error 30 percent and still affect the bill only 4 percent, if 100 percent of the generation were steam, but only a small portion is steam.

In New Hampshire the generating plants are not overbuilt and are advantageously located relative to the market. There are no conditions existing that would contribute to high-production costs.

The Power Authority of New York found transmission and subtransmission costs to be $1.92 per residential customer year. The New Hampshire transmission costs will approximate $1.80 per residential customer year. This cost, because of relative low importance, could be 100 percent in error without affecting the present residential bill 5 percent.

It is evident from the above that the over-all cost of residential current delivered to the distribution system is $5.88 per customer year for 600 kilowatt-hour annual consumption. This figure substantially checks the upper New York figure as found by the New York Power Authority. The similar reported figure for the Boston Edison Co. is $5.88, the same as I have estimated for the State of New Hampshire. The Boston Edison Co.'s production is predominantly steam.

DISTRIBUTION AND GENERAL COSTS

It has long been known that distribution costs were the controlling factor in electric-rate structures. However, the quantitative effect was concealed in reported statements of the private companies. To appraise this amount, Senate Resolution 80 of the first session of the Seventy-third Congress directed the Federal Power Commission to report on distribution costs. As a result the Power Commission made a detailed inventory and audit of such costs in 22 sections of the United States, which were published in 1936 as Power Series No. 3 of the National Power Survey. I have placed in table No. 1 the controlling costs per customer in three localities, taken from this detailed survey. The three points selected for this comparison were the public plant at Tacoma, Wash., and the private properties at Washington, D. C., and the Nashua, N. H. Inasmuch as the existing rates in Nashua are practically the same as the State average, I have taken these bona fide figures of the Power Commission to represent the sample of New Hampshire distribution and general costs. To these Power Commission figures I have added the costs of generation, transmission, and the Federal taxes. These comparisons have been reduced to a common standard.

TABLE I.—*Annual residential costs per customer, Federal Power Commission, 1936 power survey*

[These costs are historic; that is, based on actual costs]

	Washington, D. C.	Tacoma, Wash.	Nashua, N. H.
Distribution, losses percent	12.0	11.1	9.9
Capital cost per customer:			
Distribution property	$82.11	$63.97	$32.81
Land and structures	8.56	4.58	21.20
General equipment	3.23	3.60	4.24
Working capital	2.82	2.16	1.74
Total historic cost	96.72	74.31	59.99
Annual fixed charges at 9 percent	8.70	6.69	5.40
Annual operating cost:			
Operation and maintenance	3.57	1.67	1.34
Utilization	.25	.34	.12
Commercial	3.01	1.88	2.49
New business	.93	.04	1.09
General expense	1.54	.33	1.95
Total operation and maintenance cost	9.30	4.26	6.99
Taxes (all kinds except Federal)	1.36	1.94	2.77
Dollars per customer year, distribution cost	19.36	12.89	15.16
Transmission, fixed and operating, cost	[1] .03	[1] 1.22	[2] 1.80
Generating, fixed and operating, cost	[1] 4.09	[1] 5.58	[2] 4.08
Total cost per residential customer	23.48	19.69	21.04
Federal excise and income tax	.78	.65	.70
Total delivered cost per residential customer year	24.26	20.34	21.74

[1] Supplied from reports of utility commission and municipality for kilowatt-hours actually used.
[2] Calculated from reports of private companies for 600 kilowatt-hours annual consumption.

This table presents all the segregated elements of power costs expressed in terms of dollars per customer per year. The cost per customer is substantially fixed. When consumption is increased, the cost per kilowatt-hour is reduced. It should be noted in this connection that for the past 5 years the New York Power Authority has made exhaustive electric cost surveys in New York State and elsewhere. Their conclusion was that $15 per customer-year would cover all distribution costs under a 600 kilowatt-hour per year consumption. This is comparative with the $15.16 figure applying to Nashua. The total New York Authority cost of residential generation, transmission, and distribution for this consumption is $21 per customer-year. It will be noted that this practically checks with the Nashua actual costs.

The 1937 New Hampshire residential consumption was 618 kilowatt-hours a year per meter, and the average rate was 5.61 cents per kilowatt-hour. With such a consumption and the costs as set out in table No. 1, the average residential cost in New Hampshire is about 3.52 cents per kilowatt-hour, or 37½ percent below present levels. New York State costs, as given by the power authority for 600 kilowatt-hour consumption is 5.30 cents.

Washington, D. C., has average rates which are 48 percent lower than New Hampshire rates, with customer costs 15 percent higher, as is shown in table I. Under the Washington, D. C., rates the company is earning 75 percent annually on its common stock, with an allowed interest return of 6 percent in the rate structure, the same as is used in table No. 1.

Under the high rates formerly in effect, the common stock of the Washington company earned 10 percent anually. With reduced rates, the stock earnings of this company jumped to 75 percent. This is an exorbitant earning. If these earnings were passed on to the consumers as was contemplated under the 1913 statute, the Washington, D. C., and T. V. A. rates would be substantially identical. Any way you look at the matter the indications are that the people of New Hampshire are being grossly overcharged for electric service.

CINCINNATI, OHIO

In 1933 public opinion was aroused in Cincinnati because of dissatisfaction with the electric rates of the Cincinnati Gas & Electric Co. These rates were then 20 percent lower than the existing average rates in New Hampshire. The

City Council of Cincinnati in October 1933 voted an ordinance reducing such rates 37½ percent. This ordinance was adopted just before a referendum was taken on a proposal to establish municipal ownership of gas and electricity. Following this ordinance a compromise was effected and this compromise was incorporated in a new ordinance. Under this new ordinance it was specified that for 4 successive years progressive rate reductions would be made by the Cincinnati company.

Before this ordinance went into effect the Cincinnati company sold 100 kilowatt-hours for $4.10, and by 1938 under these four reductions, the bill for 100 kilowatt-hours was reduced to $2.50. This $2.50 bill is exactly the same as the T. V. A. yardstick rate for this quantity of electricity. A Cincinnati electric-stove user consuming 250 kilowatt-hours, now pays $4.75, which is 25 cents lower than the T. V. A. yardstick rate. The Cincinnati reductions were made applicable to the top and lower blocks of the existing rate, but the largest reduction in the total bill effected the larger consumption. The Cincinnati rate formula promoted increased consumption.

Under these progressive reductions the gross earnings of the Cincinnati private company were increased from $15,289,158 to $17,050,004 in 1937. This affords a practical example of the effect on earnings of reducing electric rates. The Cincinnati rates would not have reached the T. V. A. level if public opinion had not been aroused and the public officials forced into action.

The Cincinnati company has a splendid credit rating and earns its bond interest three and eight-tenths times. The property of the Cincinnati company is also in splendid condition. Its generation is by steam with a total installed capacity of 385,000 kilovolt-amperes, which exceeds the total hydro- and steam-installed capacity in the State of New Hampshire. The Columbia station of this company is one of the outstanding supersteam plants in the country. If Cincinnati can accomplish such rate reductions and increase gross earnings, there is no reason why the companies operating in New Hampshire cannot do likewise, as the preponderance of generating sources in New Hampshire are hydro—if New Hampshire's statesmen would just put in as much time trying to protect her people from these exorbitant overcharges as one of them does abusing the T. V. A.

MONTREAL

The Montreal Light, Heat & Power Co., which serves Montreal and its environs, is the largest privately owned electric system in Canada. This company furnishes another outstanding example of the economic soundness of yardstick rates.

Some 30 years ago the Montreal company was charging 12¾ cents per kilowatt-hour for residential current, or about the same as the then average residential rate in the United States. At that time a small, separately incorporated residential section of Montreal, known as Westmount, built a municipal plant and cut rates about 25 percent. Two years later the private company reduced its rates to the Westmount level.

In the succeeding years this small municipal plant successively reduced rates. The Montreal company then followed the Westmount levels. At the end of the World War the Montreal rates had been reduced 40 percent below the United States levels, and by 1930 the Montreal home owner was paying to the private company one-half of the United States average rate.

In the midst of the competitive fight between the small Westmount plant and the large Montreal company the company offered a bonus of more than the proportionate customer cost of the distribution system to the Westmount home owner if he would transfer his service from the municipal to the private plant. This proffer of outright purchase of service aroused public opinion, and the Montreal company was unable to secure Westmount business. After this failure the Montreal company then offered to the Westmount people rates lower than the municipal rates. This effort also failed. After the failure of the last offer, and knowing that public opinion in Montreal would force action, the company put into effect over the entire city a greatly reduced schedule. The new schedule given to Montreal is on the whole practically the same as the T. V. A. yardstick rates.

The Montreal company has publicly announced that the soundness of low promotional rates has been definitely established. During the depression the market value of Montreal shares was over $500 for each $100 of actual investment. The company under these low rates has been paying 27 percent on its common shares. There are few companies in North America that have a better credit rating than the Montreal company. This company was forced into large price reductions by a very small competitive yardstick plant and learned that it was good business to reduce rates.

OTTAWA, ONTARIO

Another example that can be cited is that of Ottawa, Ontario. The Ottawa situation was covered in an article appearing in the Public Utilities Fortnightly, a magazine devoted principally to the private companies. The author of the article was an actuarial expert for one of the large life-insurance companies. In this article it was pointed out that when the Ontario hydroelectric commission entered Ottawa the private company decided to hold on and reduce its rates. After 20 years' operation this company was in splendid condition under residential rates 40 percent lower than the T. V. A. yardstick rates.

The Ottawa company was able to earn in 1937, under perhaps the lowest rates in the world, 2.24 times the fixed charges on its funded debt. For over 25 years, under the most highly competitive conditions existing, the Ottawa company has paid 6 percent or over on its common stock and has built up a surplus of 7½ percent of its property account. The private Ottawa company, as this actuarial expert pointed out, produced earnings after depreciation charges, of over 9 percent on a depreciated book value of its property.

It was also pointed out that the compensating factor under such forced and drastic rate reductions is "the growth and vitality of the electric business." The conclusion was that it was unlikely that public competition would spell ruin to the investors in a private electric property if that property was conservatively capitalized. Competition through duplicating systems doubles the cost per customer. But under such competition there is no record of an operating company bond ever defaulting as a result of such competition. It is far better to have yardstick plants and let public opinion demonstrate to the operators of the private systems that it is good business to give low rates. A yardstick plant is the type of competition which will force private management to adopt sound operating practices. Economically it is more sound than the competition of duplication.

RESIDENTIAL BILLINGS

In table 2 is presented comparative residential billings. This table indicates how the electric charges in New Hampshire compare with charges in the communities covered.

TABLE 2.—*Comparative net residential bills, 1939*

Location	Kilowatt-hour consumption per month			
	25	40	100	250
New Hampshire State average	$2.08	$2.90	$5.15	$8.27
Manchester and Nashua, N. H.	2.00	2.80	5.00	8.00
Montreal, Canada	.85	1.22	2.59	4.85
Tacoma, Wash.	.95	1.10	1.70	3.20
Washington, D. C.	.98	1.56	2.85	5.10
Cincinnati, Ohio	1.00	1.45	2.50	4.75
Composite above 4 cities	.94	1.33	2.41	4.48
Average Ontario with taxes	.85	1.15	1.78	3.25
Tennessee Valley Authority rates (Tupelo, Miss.)	.75	1.20	2.50	5.00
New York Power Authority objective	.85	1.50	2.30	3.80

This table shows how much the 105,000 residential consumers in New Hampshire are individually overcharged.

ALLIANCE OF POWER AND POLITICS

One of the reasons for high rates is the alliance of power and politics. The companies which dominate the New Hampshire electric situation have been associated with interests notorious because of tainted political work. The control officers of the principal New Hampshire company occupy the same position with similar companies in Maine. The activity of these interests in tampering with the Maine Legislature during the time the power export law was under consideration is well known.

There is a recent instance known to Members of this House, indicative of an alliance between New Hampshire power and politics. During the latter days of the Seventy-fifth Congress, hearings were held before the Flood Control Committee on the Casey resolution and the New England flood-control compacts. The Flood Control Act of June 22, 1936, authorized interstate compacts in the interest of flood control. In March 1937 representatives of the four interested States met in Hartford and appointed a subcommittee of three from each of these States to draft the proposed compacts. In due time the compacts were drawn and submitted to Congress for ratification. The compacts, as submitted, contained a joker that allowed the States, in spite of the three-quarters' cost contribution by the Federal Government, to develop water power and sell it to the private companies without consent of the Federal Government. Who was responsible for the joker? Labor, the official publication of A. F. of L. railroad labor, charged that the Power Trust was behind the joker.

In the hearings before the Flood Control Committee, page 101, Mr. Paul A. Dever, the attorney general of Massachusetts, testified that the controversial clause was inserted in the compacts to satisfy Vermont and New Hampshire.

Who represented Vermont and New Hampshire on the four-State compact committee? The controlling Vermont member was Walter S. Fenton, the attorney for the Insull and Harriman water-power interests and the lobbyist for the Insull interests at Montpelier. The dominant member from New Hampshire was Robert W. Upton, an Insull and Hopson attorney and lobbyist for the New Hampshire power companies. Under the New Hampshire law lobbyists are required to register, and this member of the compact drafting team has registered as a utility lobbyist. He has done considerable work for the then State attorney general, Thomas P. Cheney, who is listed in Poor's Register of Directors as a director of the Public Service Co. of New Hampshire.

Under the Massachusetts law of May 1936 the State planning board was designated as the agency to cooperate with the other States in framing the compacts. The vice chairman of this board, Henry I. Harriman, was the founder of the New England Power Association, a $400,000,000 holding company, whose 43 subsidiaries serve 273 cities in Massachusetts, Vermont, New Hampshire, and Rhode Island. This is the same man who fought the Boulder Dam bill in the press of 1928. The interests of this same man would secure the power benefits from the Pittsburgh Reservoir. Do not these facts indicate that the power companies were looking after their own selfish interests? If the people's interest was to be protected, would not a neutral body of draftsmen have served the purpose better?

To cover up such tactics, false issues of "State rights" and "resources belonging to the people" are raised. If these water-power resources really belong to the people, why has 99.6 percent of the existing installed hydro capacity in New Hampshire been turned over to the private utilities without protective safeguards? Do the rates charged by the private utilities indicate that the people have secured any benefits from their own resources? The opposition will claim that these power plants pay taxes. The taxes, however, are paid by the man who pushes the home switch and pays a monthly energy bill. Taxes are included in the rates paid.

HIGH RATES

High electric rates in New Hampshire are the result of several controlling factors. These price-control elements are: Lack of amortization, lack of pace-making yardstick plants, lack of adequate depreciation reserves, manipulations, top-heavy financial structures, a noninducing rate form, low kilowatt-hour sales per meter, lack of accurate information in the hands of the public, and politics.

The essential and determining factor in securing low rates is an established amortization or debt-redemption plan. Tacoma started out with low rates and a definite repayment plan. The low rates induced heavy use. Electricity replaced imported fuels. The heavy use increased earnings and provided funds for debt redemption. The New Hampshire companies operate on the opposite principle—debt with a given cost was increased by pyramiding and manipulation. These properties were operated to give funds to the manipulators through the sale of bogus securities, rather than to produce revenues through sound operation.

Only 0.3 percent of the State's installed capacity is in municipal installations. There are no plants in the State to set the pace, so that the people would know electric costs. The Power Trust and their allies have prevented this. A small high-class residential section of Montreal, through the cooperative efforts of a group of hard-headed businessmen, set the pace for the low rates existing in the Province of Quebec.

The New Hampshire companies, during the full years, failed to provide adequate depreciation reserves. The average reserve for the State is about 11 percent of the plant and property account. The very least this should be, is double this book accrued amount, and preferably should be three or four times this stated amount. One of the State's dominant companies, in a balance-sheet statement, admits placing written up revaluations into this account. Adequate financial backing of the reserve accounts is doubtful. The reason inadequate reserves have not been set up is that the holding companies have siphoned out of the State the operating companies' earnings.

The financial structure of the operating companies is top-heavy with manipulated securities. Part of this has been repudiated by the top holding companies and thousands of innocent investors have been victimized by this process of legerdemain.

The New Hampshire rate form has created a pronounced barrier to increased consumption. Today in Manchester and throughout the State the top block of the residential rate is 8 cents a kilowatt-hour or higher. Such a high top block penalizes the large number of small users; in fact, the majority. It prevents such consumers from getting out of the unprofitable class. Such a top step was discarded in the District of Columbia 18 years ago. This is indicative of how far behind the times are the New Hampshire rate schedules. Under New Hampshire conditions, costs are substantially fixed and constant. If the unused waters which flow to the sea were put to work to produce kilowatt-hours, the cost per kilowatt-hour sold would be greatly reduced and the benefits could be passed on to the people in lower rates. The use of the political slogan in New Hampshire, "The resources of New Hampshire belong to the people," is a huge joke. Those who use this slogan should point out what benefits the people have secured from the use of these resources by limited self-seeking groups.

The true situation has been kept from the people. This appears to be part of a deliberate plan. This profiting group has no interest in the people or the social benefits to be derived from low-priced current. Paid propaganda of the private companies has been fed to the people instead of facts. The alliance with politics originated with the power companies. It is a hang-over practice from the preregulation days. Politics would have only an interest of fair play, if the use of the consumers' money for such purposes were stopped.

FAVORABLE CONDITIONS

The State possesses conditions very favorable to low electric rates. The predominant generation is hydro. This generation is spread over the State, enabling power sources to be located adjacent to the load. Precipitation in New England is better sustained than any other section of the country. The flow of its rivers are reasonably uniform. Transmission distances are short, enabling the use of inexpensive low voltages. Its systems have not been overbuilt,

and the design has been conservative and scientific. There is no physical competition of duplicated facilities such as exists in Washington, D. C., between direct and alternating current, and in other locations between independent systems. The State's distribution investment is amongst the lowest in the country. A good part of the distribution system was built in low-cost times. Distribution losses are low. The direct operating and maintenance expense is extremely low, being only 36 percent of the similar expense in, say, Washington, D. C., or 57 percent of the similar expense in Los Angeles. The same condition is found in utilization and billing expenses. The general expense, however, is some 25 percent higher than the average and six times as high as the similar expense in Tacoma. This is the account to which political and propaganda work is charged.

The load factor of the industrial load is high. This means that industry uses purchased power for long hours. The distribution systems have greater capacity per dollar of investment than the average. Joint use of poles with telephone and telegraph companies is a New Hampshire practice. The large industries own their own transformers. All of these conditions should result in low rates.

THE REMEDY

The water-power resources, belonging to the people, should not be turned over to any group or agency without protective provisions. Contracts with any agency should contain provisions insuring public benefits and the establishment of fair, reasonable, and nondiscriminatory yardstick rates, based on the bona fide cost of production. This policy should be applied to all water powers, where it is legally possible to do so, and particularly to new or expiring franchises.

The State regulatory commission or municipalities should set an objective promotional rate, and require the companies to submit a plan to reach such an objective, similar to what has been done at Cincinnati. The first stage in such a progressive program should approach the composite billings, shown in table 2, and the second step in the program should be the Tacoma or T. V. A. rates.

The operating companies should be required to start immediate amortization. This is necessary to protect innocent security holders, and secure the continuance of an established low-level rate. Rates are now based on a broad interpretation of the Smythe-Ames doctrine. The national trend is definitely toward liberalizing this doctrine, and when the Supreme Court liberalizes, or changes the Smythe-Ames decision, as it will, then existing utility balance-sheet values will drop to prudent values. The prudent-value base should be reached through early amortization. Amortization is also necessary to insure the continuance of low rate levels. Adequate depreciation reserves should also be required. Manipulation and top-heavy financing should be outlawed. Future financing must be on the basis of actual costs or prudent values. The companies should be required to lay all cards on the table, stop propaganda, and get out and stay out of politics.

It is too much to expect that all of this can be accomplished through regulation. To insure fair regulation at least one yardstick plant should be established in this section in order that public opinion can regulate the regulators.

Statement on the Neutrality Bill

EXTENSION OF REMARKS

OF

HON. LOUIS LUDLOW

OF INDIANA

IN THE HOUSE OF REPRESENTATIVES

Friday, June 30, 1939

Mr. LUDLOW. Mr. Speaker, the action taken by the House on neutrality legislation is the most heartening news that has come out of Washington in many a day.

Passage of this bill in the form it was presented to Congress would have put the country on the direct road to war by making America an ally and money and munitions provider of certain powers in any unforeseen wars of the future.

The amendments adopted by the House, including the arms embargo, have the effect to recast our foreign policy in harmony with the sound principles of Washington and Jefferson, who pleaded with posterity to keep America out of foreign entanglements.

I hope the Senate will not make the colossal mistake of resurrecting and passing the so-called Bloom bill in its original form. It is a bad bill, a dangerous bill that will come home to roost on the doorstep of every Member of Congress who votes for it. If it is enacted as originally drafted it will be a tremendous force to drag us into war, and I predict that if unfortunately it should pass every Member who votes for it will live to regret it until his dying day.

We loathe dictators and their unconscionable acts, but the best way to cope with dictators is to preserve America's freedom, its prestige, and its independence of action, and not to make it the ally of any foreign powers.

The Almighty intended that America should be a bright and shining light among the nations of the earth, but that glorious destiny can never be achieved if we make our country the tail of the British lion which the lion can wag whenever it chooses.

The passage of the Bloom bill would be hailed with tumultuous joy in Downing Street, London, but it would be received with disappointment, sorrow, and gloom throughout the United States of America.

I sometimes wonder whether our sword-rattling Cabinet ministers, near-Cabinet ministers, and truculent Senators in charge of foreign relations, who are trying so hard to plunge us into world power politics, will ever learn that America is determined to forever remain America.

The House in its action has truly interpreted the overwhelming sentiment of the people of America and their grim determination to remain faithful to the principles of Washington and Jefferson which, if adhered to, will keep our country out of the dangerous web of foreign intrigue.

California Committee to Support the Wagner Act

REMARKS

OF

HON. LEE E. GEYER

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, July 6, 1939

Mr. GEYER of California. Mr. Speaker, there has been formed in the State of California an organization known as the California Committee to Support the Wagner Act. We have as officers of this committee such men as Gov. Culbert L. Olson and Hon. George Creel, as well as many labor leaders, public officials, motion picture, religious, and civic group leaders. They have sent me a letter as well as a list of the A. F. of L. organizations, unions, and central labor bodies that oppose any changes in the Wagner Act. I wish to read that letter to this body:

CALIFORNIA COMMITTEE TO SUPPORT THE WAGNER ACT,
June 27, 1939.

Hon. LEE GEYER,
House Office Building, Washington, D. C.

DEAR SIR: During the first week of June this committee informed you of its activity in behalf of the Wagner Act and its program of "no amendments."

We now wish to report to you of the further support of the Wagner Act which has been expressed by organizations throughout California. We believe it especially important to keep you informed of the A. F. of L. opposition to any changes whatsoever in the act, or in the Board personnel. We have enclosed our enlarged list of 119 A. F. of L. locals and central bodies which we know to be on record against amendments. These 119 organizations represent at least 210,000 A. F. of L. members. Additional organizations are reporting daily. Eighty-two of these 119 organizations have

adopted the enclosed resolution supporting the Wagner Act and the Labor Board as they stand. A further, partial list of miscellaneous organizations on record opposing amendments is attached.

We believe this list demonstrates conclusively powerful A. F. of L. opposition to amendments. Indeed, all progressives who believe that the Wagner Act is necessary in equalizing employer-employee relationships are heartily opposed to amendments which, they hold, would restore the old unfair employer dominance.

Respectfully,

KATHARINE HOGLE, *Acting Executive Secretary.*

Whereas the provisions of the Wagner Act have served to protect the entire working people of this country in their efforts to organize and bargain collectively; and

Whereas all organized labor has an equal and vital stake in the preservation of the act, its principles and its administrative body, the Labor Board, which latter, we believe, has been eminently just to all groups of workers organized in bona fide trade-unions; and

Whereas it is the intention of enemies of the Wagner Act, by means of amendments, to weaken or destroy the protection afforded by the act and to drastically curb the power and effectiveness of the National Labor Relations Board: Therefore be it

Resolved, That we, members of _____, local No. __, meeting in regular session, go on record unalterably opposed to any and all changes in or amendments to the Wagner Act and the Labor Board which administers it; and be it further

Resolved, That a copy of this resolution be forwarded to Senator ELBERT D. THOMAS, chairman of the Senate Committee on Education and Labor; Senator ROBERT F. WAGNER, and Congresswoman MARY T. NORTON, chairman of the House Labor Committee; and be it further

Resolved, That signed and sealed copies of this resolution be sent to the Committee to Support the Wagner Act, 83 McAllister Street, San Francisco, Calif.

CALIFORNIA COMMITTEE TO SUPPORT THE WAGNER ACT, 83 MCALLISTER STREET, SAN FRANCISCO, CALIF.

[Revised list, June 26, 1939]

One hundred and nineteen California American Federation of Labor and central bodies on record as opposing amendments to the National Labor Relations Act. (Asterisk indicates local or central body has adopted resolution of committee stating support of Wagner Act and Labor Board as they now stand.)

This list represents approximately 210,000 members of the American Federation of Labor locals and central bodies in California.

1. A. F. of L. representatives of five counties at meeting under chairmanship of E. J. Davis at San Mateo (secretary of Santa Clara Labor Council).
2. * Atolia Mine and Mill Workers (Trona).

Bakery and Confectionery International Union of America.

3. * Cracker Bakers, No. 125 (San Francisco).
4. * Borax Workers, No. 19820 (Trona).

Bricklayers, Masons, and Plasterers International Union.

5. * Bricklayers, No. 7 (San Francisco).

Toll-Free Bridge Needed Across St. Louis River Between Duluth, Minn., and Superior, Wis.

EXTENSION OF REMARKS

OF

HON. WILLIAM A. PITTENGER

OF MINNESOTA

IN THE HOUSE OF REPRESENTATIVES

Thursday, July 6, 1939

Mr. PITTENGER. Mr. Speaker, the House of Representatives has just passed by unanimous action H. R. 6475, a bill which I introduced on May 23 authorizing the city of Duluth, Minn., to construct a bridge across the St. Louis River between the States of Minnesota and Wisconsin from the city of Duluth to the city of Superior. The companion bill in the Senate, introduced by Senator HENRIK SHIPSTEAD at this session, is known as S. 2474, and this bill is identical with the House bill. The passage of this legislation at this session of Congress will be the first constructive step that has been taken to provide a bridge free of tolls between the cities of Duluth, Minn., and Superior, Wis. Briefly, this proposed legislation authorizes the city of Duluth to construct and operate a vehicular toll bridge across the St. Louis River. For the purpose of constructing this bridge the city of Duluth may issue bonds which are not an obligation against the taxpayers of said city, but which bonds are to be retired and amortized out of revenue resulting from the collection of tolls for the use of said bridge by passengers and vehicles.

The bill provides that after the bonds have been paid the city of Duluth shall transfer the bridge to the State highway departments of Wisconsin and Minnesota, who shall thereupon operate the bridge free of tolls. Under this bill there is no element of commercialism, no watered stock, and no one to make a profit. The city of Duluth cannot use the bridge revenue for any other purpose except as above noted. It is not authorized to issue stock. This bill is clearly in the interests of every person not only in Wisconsin and Minnesota but in every other part of the country who wishes to cross the St. Louis River where these two cities are located without paying tribute to Caesar. Up to date I have had no single objection from anyone against this bill. Certain amendments have been suggested, and they have been adopted. They do not change the purpose of the bill. With these amendments, I can say correctly that the bill meets with the approval of the Bureau of the Budget, the Bureau of Public Roads, and the War Department.

In 1938 certain legislation was passed by Congress authorizing the Port Authority of Duluth and the Harbor Authority of Superior to build and operate a bridge across the St. Louis River at this point. After this legislation was adopted it was discovered that neither of these organizations had authority under the power that created them to build or operate a bridge, and I have been told that one of them was expressly forbidden to do such a thing. It is evident to every attorney that the act of Congress could not confer upon such authorities powers which they were not authorized to exercise by their respective States. Consequently, any steps they might take toward building a bridge, even under attempted powers granted them by Congress, would have no effect.

At the present time there is a toll bridge across the St. Louis River, but this bridge is well along in years and there is need for a new structure. When this toll bridge was authorized in 1894 the people were promised that it would in time become a toll-free bridge, but that date appears now just as far off as it was in 1894. It is claimed that the owners of the present toll bridge have a lucrative source of revenue, and efforts to ascertain the cost of the bridge, its upkeep from time to time, its revenue, and other important matters, have been unsuccessful. There is no public record showing how much has been collected in the way of tolls since the bridge started to operate in 1896 or 1897.

It is my opinion that people who travel the highways of the United States are entitled to do so without paying tribute for the use of any highway or any bridge connected therewith. Toll bridges ought to be a relic of the past, and if present legislation is enacted into law, the city of Duluth will have the power and the authority to make this wish come true.

In my opinion, a toll-free bridge will be to the mutual advantage of Duluth and the State of Minnesota, and of Superior and the State of Wisconsin. The cities of Superior, Wis., and Duluth, Minn., have many things in common, and both will be benefited if their respective citizens can travel back and forth every day, as they can do when the bridge is paid for, without having the toll collector levy his tribute on each trip that they make. Under the present practice tolls are charged without any relation whatever to the expense of the operation of the bridge, and only the present owners know the amount of profit they make by this franchise, which was granted to their predecessors many years ago by the Congress of the United States.

The suggestion may be made that under existing law of 1894 there is a method provided for acquiring this bridge and operating it toll free. It is true that the existing law does set forth certain indefinite procedure whereby the bridge can be acquired by the cities of Duluth, Minn., and Superior, Wis., or by other municipal agencies. But note this practical difficulty and objection which will prevent any such procedure: The bill provides—and here is the joker—that at the very time that these municipalities acquire the present bridge they shall operate it at their own expense, free of tolls. In other words, there is no provision made whereby the municipalities can collect tolls for the purpose of paying for the bridge or for its maintenance. Anyone familiar with municipal finances and with the fact that the taxpayers in

these localities are already heavily bonded will readily understand that as a practical matter it is and will be impossible for either the city of Duluth, Minn., or the city of Superior, Wis., or both of them, to buy or take over the existing bridge and pay for it and then operate it toll free, as is required by the act of 1894.

The effect of this law of 1894 is to give a practical monopoly to the present owner of the bridge. The average American citizen does not believe in monopoly or special privilege; neither do I. Consequently the pending legislation, H. R. 6475 and S. 2474, has been introduced so as to enable necessary steps to be taken to eliminate the monopoly which now exists in authorizing a private corporation or individual to indefinitely collect tolls from every person who wishes to travel between Duluth, Minn., and Superior, Wis. I make this rather brief explanation so that the public may be advised as to the purpose of this legislation and the results which will be obtained if and when it is enacted into law.

The bill, as amended and passed, reads as follows:

H. R. 6475, Seventy-sixth Congress, first session

A bill to authorize the city of Duluth, in the State of Minnesota, to construct a toll bridge across the St. Louis River, between the States of Minnesota and Wisconsin, and for other purposes

Be it enacted, etc., That the consent of Congress is hereby granted to the city of Duluth, in the State of Minnesota, to acquire and thereafter operate and maintain either or both of the existing vehicular toll bridges across the St. Louis River, between St. Louis County, in the State of Minnesota, and Douglas County, in the State of Wisconsin, and should said city be unable, after negotiation, to agree with the owners of the respective bridges upon a mutually satisfactory purchase price, then said city is hereby authorized to require the transfer of such bridge or bridges to said city upon payment of the price or prices computed according to the provisions for public acquisition of the bridges by the respective acts of Congress which authorized the original construction of such bridges.

SEC. 2. In order to facilitate interstate commerce, improve the Postal Service, and provide for military and other purposes, said city of Duluth is authorized to construct, maintain, and operate an additional vehicular-toll bridge and approaches across the St. Louis River, at a point suitable to the interests of navigation from St. Louis County in the State of Minnesota to a point in Douglas County in the State of Wisconsin, as approved, within a reasonable time, by the city council of the city of Superior, Wis., and in accordance with the provisions of an act entitled "An act to regulate the construction of bridges over navigable waters," approved March 23, 1906, and subject to the conditions and limitations contained in this act. There is hereby conferred upon said city all rights and powers to enter upon lands and to acquire, condemn, occupy, possess, and use such real estate and other property as may be needed for the location, construction, operation, and maintenance of such bridge or bridges and approaches thereto as are possessed by railroad corporations for railroad purposes, or by bridge corporations for bridge purposes in the State in which such real estate or other property is situated, upon making just compensation therefor to be ascertained and paid according to the laws of the State in which such property may be located, and the proceedings therefor shall be the same as in condemnation or expropriation of property for public purposes in such State.

SEC. 3. Said city of Duluth is hereby authorized to fix and charge tolls for transit over any bridge or bridges acquired or constructed under the provisions of this act, and the rates of toll so fixed shall be such as will pay costs of operation and maintenance and amortize the cost, within the period provided herein, of such bridge or bridges as evidenced by an issue or issues of bonds to pay the cost of such bridge or bridges, which bonds may be so issued subject to and in accordance with the pertinent laws of the State of Minnesota. All such bonds shall be in a form not inconsistent with this act and shall mature at such time or times as the city may determine, not exceeding 20 years from the date of approval of this act. The city, when it deems it to be in the best interests of the city, may issue refunding bonds to repurchase and redeem any outstanding bonds before the maturity thereof: *Provided*, That the refunding bonds shall mature at such time or times not exceeding 30 years from the date of approval of this act, as the city may determine. An accurate record of the cost of any bridge or bridges and their approaches acquired or constructed, the expenditures for maintaining, repairing, and operating the same, and of the daily tolls collected, shall be kept and shall be available for the information of all persons interested.

SEC. 4. After payment of the bonds and interest, or after a sinking fund sufficient for such payment shall have been provided and shall be held for that purpose, the city shall deliver deeds or other suitable instruments of conveyance of the interest of the city in and to the bridge or bridges extending between the State of Minnesota and the State of Wisconsin that part of said bridge or bridges within Minnesota to the State of Minnesota or any municipality or agency thereof as may be authorized by or pursuant to law to accept the same (hereafter referred to as the "Minnesota interests"), and that part of said bridge or bridges within Wisconsin to the State of Wisconsin, or any municipality or agency thereof as may be authorized by or pursuant to law to accept the same (hereafter referred to as the "Wisconsin interests"), under the condition that the bridge or bridges shall thereafter be free of tolls and be properly maintained, operated, and repaired by the Minnesota interests and the Wisconsin interests as may be agreed upon; but if the Minnesota interests and the Wisconsin interests fail to accept or are not authorized to accept, their respective portion of said bridge or bridges, then the city may deliver deeds or other suitable instruments of conveyance of said portions to any other interest which may accept and may be authorized to accept the same under the conditions that the bridge or bridges shall thereafter be free of toll and be properly maintained, operated, and repaired by said interest to whom said conveyances are delivered; but if either the Minnesota interests, or the Wisconsin interests, or any other interest hereinabove mentioned shall not be authorized to accept or shall not accept the same under such conditions, then the bridge or bridges shall continue to be owned, maintained, operated, and repaired by the city of Duluth as a free bridge. The rate or rates of toll for any bridge now or hereafter constructed across the St. Louis River between St. Louis County in Minnesota and Douglas County in Wisconsin shall not be reduced below the rate or rates now in effect so long as any bonds of said city of Duluth issued for account of any bridge or bridges acquired or constructed under the provisions of this act may be outstanding, subject, however, to the provisions regulating toll contained in the act of March 23, 1906.

SEC. 5. The right to alter, amend, or repeal this act is hereby expressly reserved.

Uncle Sam's "Trouble Shooters"

EXTENSION OF REMARKS

OF

HON. JOHN M. HOUSTON

OF KANSAS

IN THE HOUSE OF REPRESENTATIVES

Thursday, July 6, 1939

ARTICLE BY RUBEN LEVIN

Mr. HOUSTON. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article by Mr. Ruben Levin which has appeared in the June issue of the following magazines: The Railway Clerk, Journal of the Switchmen's Union, Railway Carmen's Journal, Train Dispatcher, the Boilermakers' Journal, and the Machinists Journal.

UNCLE SAM'S "TROUBLE SHOOTERS"—DEPARTMENT OF LABOR CONCILIATORS DON'T TALK MUCH BUT ARE DOING A MIGHTY EFFECTIVE JOB

(By Ruben Levin)

Under the command of the Department of Labor, a corps of 50 "trouble shooters"—officially, commissioners of conciliation—are quietly at work throughout the nation, averting a strike here, settling a strike there, solving a thousand and one deadlocks between labor and management.

They don't talk much about their work and they don't get much play in the headlines. They do their tasks behind the scenes and look for no glory other than the satisfaction of a job well done.

Just how do they operate? What have they accomplished? What are they up against?

Their story might best be told by turning back the pages of history a bit. It was something over 26 years ago when portly President William Howard Taft signed an act of Congress that marked a milestone in national recognition of the workingman.

The act set up the Department of Labor and Taft's signature to it was his last official gesture before he left the White House on March 4, 1913. A day later another President, Woodrow Wilson, chose as head of the new Department a man who had known the meaning of toil since the age of 8. He was Congressman William B. Wilson, namesake of the President, though unrelated. "Billy" Wilson had been a breaker boy in the mines of Pennsylvania before he had passed his eighth birthday. He became a leader in the Miners' Union, rising to international secretary, and finally going to the Halls of Congress.

The act creating the Department of Labor was "Billy" Wilson's brain child. As chairman of the House Labor Committee, he had helped guide it through the Nation's lawmaking body, and it was fitting that he be named to pilot the new department.

Conciliation of labor disputes was laid down as the principal aim of the Department. Wilson steered it that way and by its first birthday he was able to report he had helped settle "several" such disputes.

Year by year the conciliation end grew. By 1917 it emerged as a separate subdivision, known as the Conciliation Service, managed

by Hugh Kerwin, who had been "Billy" Wilson's efficient secretary in Congress.

For 20 years Kerwin remained at the helm. At his death, 2 years ago, his place was taken by one of his conciliators, Dr. John R. Steelman, soft-spoken southerner, who, after a background as harvest hand and lumberjack, went through five colleges, got a degree of doctor of philosophy, and did a number of turns as professor of economics.

In the 26 years since "Billy" Wilson started the job of conciliation, the Department has handled nearly 25,000 cases involving about 25,000,000 workers. During the past year alone Dr. Steelman and his staff of 50 peacemakers have disposed of 4,231 cases covering 1,600,000 working men and women. Quite a stride in a quarter century.

In doing the job the Conciliation Service has rolled up a batting average of 90 to 95 percent. It has chalked up that record of cases successfully settled in spite of the fact, as Dr. Steelman puts it, that "we have no law to enforce; we have no police power; we can't make anybody do anything."

No wonder the service has become recognized by Secretary of Labor Frances Perkins and Assistant Secretary C. V. McLaughlin as one of the most valuable adjuncts of the Department of Labor. McLaughlin, who is himself a veteran labor leader and vice president of the Brotherhood of Locomotive Firemen and Enginemen, is convinced that the Conciliation Service has done a fine job, worthy of the highest praise.

Little of what the Conciliation Service does makes the front pages of newspapers. It hands out no press releases, other than a skeleton weekly list of "cases adjusted" and "new cases assigned." Yet it is doing dramatic work of the kind that makes a dramatic story.

Time and again a Federal conciliator has walked in while management and labor were at loggerheads, and won a settlement when a strike seemed inevitable. How does he do it? A few examples will give a better idea than a detailed explanation.

Recently a steamship company had two of its ships tied up in a southern port by a strike of crews. They charged the firm had violated a contract by hiring men off the docks instead of through the union hiring hall. Within a day, a conciliator was on the job.

He found both sides at swords' points. The management insisted it had not infringed on the contract. The union demanded all who were employed from the docks, as well as others who scabbed, be fired, forthwith.

After long and temper-straining conferences, the conciliator worked out a compromise that both groups accepted. It provided that the men whom the union wanted discharged be required to report at union headquarters for discipline and be placed on probation by the union for a year. Everything seemed settled.

But there's the proverbial slip between the cup and the lip. Those who were to be disciplined refused to report at the union offices. Whereupon the union sent new men to take their places. The "scabs" started a free-for-all fight, however, blocked the union men from going aboard, and the whole settlement faced collapse.

The conciliator had to start over again. This time he suggested the entire crews of the two ships be paid off and new crews be hired through the union. That way, he said, was the only remaining hope for peace. The management agreed, the union supplied the men, and the ships sailed.

One of the toughest nuts conciliators must often crack is a deadlock between management and labor over a closed shop. To solve this the conciliator must figure out many an alternative for the 100-percent union shop. An unusual solution was put forward in Washington during a strike of workers at several cafeterias in Government buildings.

The union demanded a closed shop and check-off of dues. A semi-Government association operating the cafeterias rejected the demand. A conciliator stepped into the picture and developed a plan by which a sum equivalent to dues was to be deducted from each worker but he was to be left free to assign the sum to the union or to a charity. In nearly all cases the union was designated. Above all, it won its point that every employee should pay equally for the benefits the union obtained for him.

Refusal of employers to sign contracts likewise produces stalemates that often tax the ingenuity of the conciliators. Here's how one of the Federal men solved such a situation in the case of a southern manufacturer: The employer orally reached an agreement with a union, put the terms of the pact into effect, but wouldn't sign a written contract.

The conciliator devised a plan that avoided a strike. He persuaded the employer to reduce the terms to writing and sign them. Then the conciliator and the union's executives likewise added their signatures as witnesses. Thus while this did not literally constitute a contract it was a legal equivalent to it and the union approved.

To do an effective job, the conciliator must have a combination of mediating skill, a fertile imagination, and a good grounding in both unionism and industrial problems, Dr. Steelman pointed out. He can't use any cut-and-dried formula, since each case presents a different situation.

However, customarily this technique is followed: The conciliator tries to get the real facts of the controversy; he learns the exact position of the rival parties; he seeks to get them together at the roundtable in a friendly atmosphere, and, finally, he thinks up settlements to which both can agree.

"We operate on the theory that a dispute settled at the conference table is more likely to stick than one fought out at the picket line, and it is less likely to leave bitterness," Dr. Steelman explained.

By and large, employers are getting accustomed to the idea of collective bargaining, but they haven't as yet accepted it as thoroughly as have employers in Great Britain, Dr. Steelman declared. Until they do, the Conciliation Service has plenty of work ahead, he is sure.

The enactment of the National Labor Relations Act hasn't reduced the activities of the Conciliation Service. In fact, because of the rapid growth of unionism since the act was passed, the Service has more to tackle than it ever had, Dr. Steelman made it clear.

More and more unions, as well as management, are resorting to conciliation, he said. Some unions have a fixed policy of requiring use of conciliators before a strike is called. One of these is the International Association of Machinists. It will give strike sanction to a local lodge only on condition that a conciliator first be called to exhaust his efforts.

Acting President Harvey W. Brown of the machinists thinks the policy has had very good results.

"We have found that in a great many instances the entrance of a Federal conciliator has made it possible to obtain satisfactory settlements without the need of a strike," Brown said.

It's Dr. Steelman's hope that other unions may follow this example. He is a strong champion of unionism and collective bargaining as the way to industrial peace and as a fundamental protection of democracy.

"I believe free, self-governing unions are a bulwark of democracy," he asserted "Through no other means can labor bargain with industry on a semblance of equality. Labor unions can be the greatest stabilizing influence for industrial peace in any democracy."

The Jewish Homeland and the Palestine Mandate

EXTENSION OF REMARKS

OF

HON. JOHN W. McCORMACK

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Thursday, July 6, 1939

Mr. McCORMACK. Mr. Speaker, the association of the Jewish people with Palestine dates back over 4,000 years. During all that time Jews have resided almost continuously in Palestine, having established Jewish commonwealths at two different periods.

The second Jewish commonwealth was destroyed by the Romans under Titus in the year A. D. 70. About 65 years later, under the Emperor Hadrian, the Romans, after a long struggle, crushed the final attempt to revive the Jewish commonwealth. From that time on, while Jews continued to live in Palestine, they ceased to be the ruling factor there.

The country passed into the hands of many Moslem conquerors, and for about a century was ruled by the crusaders, but the stagnation which set in when the Jews ceased to rule grew worse as time went on, so that by the middle of the nineteenth century the land became bare and dry as a desert.

This was the condition of the country when Jews established their first agricultural settlement in 1878 at Petach Tikvah near Jaffa. This was followed by the founding of others, and the settlement of Jews in Palestine received great impetus from the Zionist movement which was founded in 1897.

The aim of the Zionist movement, as restated by the Seventeenth Zionist Congress held in 1931, is as follows:

> Zionism is a national movement to secure the freedom of the Jewish people. It adheres firmly and unalterably to its aim to bring about in Eretz Israel (the land of Israel) the solution of the Jewish problem.
>
> The homeless and landless Jewish people, which is compelled to migrate, strives to overcome its political, economic, and spiritual condition by reestablishing itself in its historic homeland through an uninterrupted immigration and settlement and by re-creating in Eretz Israel its national life with all the essential features of a people's existence.

Up to the World War, Palestine was one of the provinces of the Turkish Empire, and by the latter part of 1917 the British Army had already taken the southern part of the country and had advanced up beyond the Jaffa-Jerusalem line. It was at about this time on November 2, 1917, that

the British Government issued what has come to be known as the Balfour declaration, which reads as follows:

His Majesty's Government view with favor the establishment in Palestine of a national home for the Jewish people, and will use their best endeavors to facilitate this object, it being clearly understood that nothing shall be done which may prejudice the civil and religious rights of existing non-Jewish communities in Palestine, or the rights and political status of Jews in any other country.

The text of this declaration was submitted to President Wilson and was approved by him before its publication. On the 14th of February and the 9th of May 1918 the French and Italian Governments publicly endorsed it. This document was the result of the combined effort of the principal allied governments, including the American Government, and was a decision openly arrived at and publicly declared before the world.

The end of the World War left the problem of Palestine as one of the many questions for the peacemakers. American interest in the future of the Holy Land soon manifested itself. My own State of Massachusetts was the first to take action. Three resolutions were adopted by our legislature, all urging the restoration of the Jewish commonwealth in Palestine; one on February 13, 1919; one on May 5, 1920; and a joint order of the senate and the house of representatives on March 29, 1922. These resolutions read as follows:

The Commonwealth of Massachusetts, in the year 1919

Resolutions relative to the establishment of a Jewish homeland in Palestine and the protection of Jewish rights and liberties in the settlement of the European war

Whereas the future prosperity and peace of the world depend upon a just settlement of the European war whereby every nationality, however small, shall be granted the right to determine its own destiny and the opportunity of living its own life; and

Whereas the Government of the United States is recognized as an ardent exponent of the rights of the small nations: Therefore, be it

Resolved, That in the opinion of the House of Representatives of the Commonwealth of Massachusetts, the national aspirations and historic claims of the Jewish people with regard to Palestine should be recognized at the peace conference, and that, in accordance with the British Government's declaration of November 2, 1917, there should be established such political, administrative, and economic conditions in Palestine as will assure the development of Palestine into a Jewish commonwealth, and that the American representatives at the peace conference should use their best endeavors to accomplish this object; and be it further

Resolved, That, in the opinion of the House of Representatives of Massachusetts, express provision should be made at the peace conference for granting to the Jewish people in every land the complete enjoyment of life and liberty and the opportunities for national development, to the end that justice may be done to that people which, in the long course of history, has suffered more than any other on earth; and be it further

Resolved, That a copy of these resolutions be transmitted by the secretary of the Commonwealth to the President of the United States.

In the house of representatives, adopted February 13, 1919.

A true copy. Attest:

ALBERT P. LANGTRY,
Secretary of the Commonwealth.

The Commonwealth of Massachusetts, in the year 1920. An order relative to the official recognition by the Powers of the right of the Jewish people to a national existence in Palestine

Ordered, That the Massachusetts House of Representatives greets with profound satisfaction the official recognition by the Powers of the right of the Jewish people to a national existence in Palestine and that it deeply rejoices to see the national liberation of the children of Israel, who will once more shed luster on our civilization; that it hails the Jewish national restoration to the ancestral soil as a triumph of justice, for which all mankind should be grateful; that it urges the Government of the United States of America to use its best endeavors to facilitate the speedy development of Palestine into a Jewish national homeland, for only on its own soil can the Jewish people live its own life and make, as it has made in the past, its characteristic and specific contribution to the spiritual treasure of humanity; and be it further

Ordered, That copies of this order be forwarded by the secretary of the Commonwealth to the President of the United States, to the Senators and Representatives in Congress from this Commonwealth, and to the Zionist Organization of America.

In house of representatives, adopted, May 5, 1920.

A true copy.

Attest:

ALBERT P. LANGTRY,
Secretary of the Commonwealth.

The Commonwealth of Massachusetts

Whereas the Supreme Council of the Allied Peace Conference, meeting at San Remo, recognized the right of the Jewish people to a national existence in Palestine and conferred upon Great Britain a mandate over Palestine; and

Whereas the various great nations of the world have approved the establishment of the national homeland for the Jews in Palestine; and

Whereas the people of the United States, individually and through their spokesmen in Congress, and by leading men in all walks of life, have expressed their gratification at the realization of the national hopes of the Jews; and

Whereas the General Court of Massachusetts views with pleasure the progress of the Jewish people in Palestine in developing the economic resources of the country, in founding institutions of learning and in creating a spiritual center so that it may better serve mankind: Therefore be it

Ordered, That the General Court of Massachusetts urges the Government of the United States to formally recognize the present status of the Jewish people in Palestine and thus to approve the fulfillment of its yearning desire for a national home in the land of its forefathers; and be it further

Ordered, that copies of this order be sent by the secretary of the Commonwealth to the President of the United States, to the presiding officers of both branches of Congress, to each of the Senators and Representatives in Congress from Massachusetts, and to the Zionist Organization of America.

House of representatives, March 29, 1922, adopted. Sent up for concurrence.

JAMES H. KIMBALL, *Clerk.*

Senate, March 29, 1922, adopted in concurrence.

WILLIAM H. SANGER, *Clerk.*

A true copy. Attest:

F. W. COOK, *Secretary of the Commonwealth.*

Following this action, the Sixty-seventh Congress of the United States adopted unanimously a joint resolution favoring the establishment of the Jewish National Home in Palestine, using the language of the Balfour declaration. This resolution was introduced in the Senate by the late Henry Cabot Lodge, who was then chairman of the Committee on Foreign Affairs, and in the House of Representatives by Congressman HAMILTON FISH. This unanimous action of the Congress makes the establishment of the Jewish homeland in Palestine a favored ideal of the foreign policy of the United States. This Lodge-Fish resolution reads as follows:

Joint resolution favoring the establishment of a national home for the Jewish people

Sixty-seventh Congress of the United States of America; at the second session begun and held at the city of Washington on Monday, the 5th of December 1921

Resolved, etc., That the United States of America favors the establishment in Palestine of a national home for the Jewish people, it being clearly understood that nothing shall be done which may prejudice the civil and religious rights of Christian and all other non-Jewish communities in Palestine and that the holy places and religious buildings and sites in Palestine shall be adequately protected.

T. H. GILLETTE,
Speaker of the House of Representatives.
ALBERT B. CUMMINS,
President of the Senate Pro Tempore.

Approved September 21, 1922.

WARREN G. HARDING.

That my home State of Massachusetts is still in favor of the establishment of the Jewish homeland is clear from the joint resolution adopted unanimously by the General Court of Massachusetts on May 12, 1939, which reads as follows:

The Commonwealth of Massachusetts, in the year 1939—Resolutions memorializing Congress relative to the Jewish national home in Palestine

Whereas recognition has been given by the nations of the world to the historical connection of the Jewish people with Palestine and to the grounds for reconstituting their national home in that country; and

Whereas the United States of America has given its approval to the reestablishment of the Jewish national home in Palestine, as embodied in a resolution adopted by the Congress of the United States known as the Lodge resolution; and

Whereas the General Court of Massachusetts deplores the persecution of peoples in any land based upon racial bigotry and religious intolerance and has on previous occasions expressed its sympathetic interest in the Jewish national aspirations: Therefore be it

Resolved, That the General Court of Massachusetts expresses its concern in the welfare of the Jewish national home and its admiration of the progress made in Palestine by the efforts of the Jewish pioneers;

That it is inspiring to behold an ancient people return to the land of its origin for the purpose of being able to live its own life,

to develop their own culture and civilization, and to mold its national destiny; and

That it views with favor the achievements of the Jewish pioneers in Palestine where opportunities were created for tens of thousands of Jews to return to the land of their fathers as of right and not on sufferance; and be it further

Resolved, That the United States of America be, and is respectfully, solicited to use its good offices for the purpose of safeguarding the integrity of the Balfour declaration and the interest of the Jewish National Home, in accordance with the terms of the Palestine mandate, and to the end that the doors of Palestine may be opened for the purpose of admitting the homeless Jewish victims of racial bigotry and religious intolerance, where they may find the opportunity of rebuilding their broken lives; and be it further

Resolved, That copies of these resolutions be forwarded by the secretary of the Commonwealth to the President of the United States, to the Vice President of the United States, to the Speaker of the House of Representatives, and to the Representatives in Congress from this Commonwealth.

In senate, adopted May 11, 1939, Irving N. Hayden, clerk.

In house of representatives, adopted, in concurrence, May 12, 1939, Lawrence R. Grove, clerk.

A true copy.

Attest:

F. W. Cook,
Secretary of the Commonwealth.

Every President of the United States since President Wilson—Presidents Wilson, Harding, Coolidge, and Roosevelt—has expressed himself in favor of the establishment of the Jewish homeland in Palestine. The expressions have been frequently made by all of the Presidents. A few of these typical statements are here quoted.

President Franklin D. Roosevelt (October 1932):

Out of the World War came a matter of great spiritual significance—the establishment of a homeland for the Jewish people, recognized as such by the public law of the world. In the realization of this aim, the United States played a leading role.

Jewish achievement in Palestine since the Balfour declaration vindicates the high hope which lay behind the sponsorship of the homeland. The Jewish development in Palestine since the Balfour declaration is not only a tribute to the creative powers of the Jewish people but by bringing great achievement into the sacred land has promoted the well-being of all the inhabitants thereof.

As recently as July 2, 1938, in a letter addressed to the Zionist Organization of America, on the occasion of its convention, he wrote:

It gives me great pleasure to reiterate all the friendly sentiments which I have expressed to the Zionist Organization of America. I have watched the rehabilitation of the Jewish homeland with deep interest through many years and trust that the forthcoming convention of your organization will be fruitful of wise counsels and constructive action towards the realization of a noble ideal.

President Herbert Hoover, September 1928:

I have watched with genuine admiration the steady and unmistakable progress made in the rehabilitation of Palestine which, desolate for centuries, is now renewing its youth and vitality through the enthusiasm, hard work, and self-sacrifice of the Jewish pioneers who toil there in a spirit of peace and social justice. It is very gratifying to note that many American Jews, Zionists as well as non-Zionists, have rendered such splendid service to this cause which merits the sympathy and moral encouragement of everyone.

President Calvin Coolidge:

The proposed plan furnishes to the Jewish people an opportunity to devote their great qualities to the upbuilding and preservation of their own homeland and in their own sphere, and I feel sure that the people of the United States will not fail to give that earnest and substantial aid which will be necessary if it is to meet with a full measure of success.

President Warren G. Harding (May 1922):

I am very glad to express approval and hearty sympathy for the effort of the Palestine foundation fund, in behalf of the restoration of Palestine as a homeland for the Jewish people. I have always viewed with an interest, which I think is quite as much practical as sentimental, the proposal for the rehabilitation of Palestine and the restoration of a real nationality.

President Woodrow Wilson (August 1918):

I welcome an opportunity to express the satisfaction I have felt in the progress of the Zionist movement in the United States and in the Allied countries since the declaration by Mr. Balfour on behalf of the British Government, of Great Britain's approval of the establishment in Palestine of a national home for the Jewish people, and his promise that the British Government would use its best endeavors to facilitate the achievement of that object, with the understanding that nothing would be done to prejudice the civil and religious rights of non-Jewish people in Palestine or the rights and political status enjoyed by Jews in other countries.

In 1922, Great Britain was given a mandate for Palestine by the League of Nations. A High Commissioner is appointed by Britain who has practically all governmental authority, subject to the control of the British Colonial Office and subject also to a report to the League of Nations. The mandate itself in its preamble recites "that the mandatory shall be responsible for putting in effect the declaration originally made on November 2, 1917," and in the next clause that "recognition has thereby been given to the historical connection of the Jewish people with Palestine and to the grounds for reconstituting their national home in the country." Several clauses of the mandate itself deal directly with steps to be taken to facilitate the establishment of the Jewish homeland.

This mandate was ratified after a full and public discussion by 52 nations affiliated with the League of Nations. The United States, not being a member of the League, ratified the mandate by a treaty with Great Britain, dated December 3, 1924. This treaty recites the whole of the mandate, including its preamble. There are only eight articles in the treaty itself which deal mainly with American rights and interests in Palestine, but article 1 of the treaty must have special significance. It reads as follows:

Article 1. Subject to the provisions of the present convention the United States consents to the administration of Palestine by His Brittanic Majesty, pursuant to the mandate recited above.

This article read in the light of the participation of our Government in the series of events which led to the adoption of the mandate can lead to no other conclusion than that it is another approval by our Government of the expressed main purpose of the mandate—the establishment of the Jewish homeland in Palestine.

Relying upon the assurances given in the Balfour declaration and the mandate, the Jewish population of the country has grown from 55,000 in 1918 to about 450,000. Of this number about 300,000 are immigrants. Competent authorities estimate that Jews have brought about $450,000,000 of capital into the country. They have built up 250 agricultural settlements with a population of 97,000 who make their living from the soil. Jews have again become farmers as in the biblical days and have made the soil of the Holy Land produce crops where only a generation ago were bare sand dunes and desert.

Even more impressive has been the urban development. Tel Aviv, from a small suburb of Jaffa, has grown in 20 years to an all-Jewish city of 150,000, with all the modern comforts of a western city. Haifa, from an unimportant port, has become the busiest shipping center of the Mediterranean.

During the latter part of 1936 the British Government sent the Palestine Royal Commission to make an investigation of conditions in Palestine. A royal commission is a very important body as it received its authority directly from the Crown unlike the usual investigating commission which may be appointed by one of the Government departments. The Royal Commission spent some months in Palestine and made an extended examination into all phases of the problems of Palestine, going back to the earliest times. Its report of 400 pages was published in July 1937 and contains a wealth of information. Most of the quotations cited in this address are from this report.

On page 116 of the Palestine Royal Commission Report:

With every year that passes, the contrast between this intensely democratic and highly organized modern community and the old-fashioned Arab world around it grows sharper, and in nothing, perhaps, more than on its cultural side.

One item cited by the commission in support of the above remark is exceedingly interesting. It is as follows:

Perhaps the most striking aspect of the culture of the National Home is its love of music. It was while we were in Palestine, as it happened, that Signor Toscanini conducted the Palestine Symphony Orchestra, composed of some 70 Palestine Jews, in 6 concerts mainly devoted to the works of Brahms and Beethoven. On

each occasion every seat was occupied, and it is noteworthy that one concert was reserved for some 3,000 workpeople at very low rates, and another 3,000 attended the orchestra's final rehearsal. All in all, the cultural achievement of this little community of 400,000 people is one of the most remarkable features of the National Home.

The education system maintained by the Jewish homeland has commanded the admiration of all who have come to Palestine. The Palestine Royal Commission on page 336 speaks in the highest terms of the Hebrew University.

The apex of the Jewish educational system is the Hebrew University of Jerusalem. The main purpose of its foundation was a center for postgraduate research in science and the humanities; but the demand for university education among the Jews has been so great that there is now a considerable body of undergraduates. The university has departments of Jewish studies, Oriental studies, general humanities, mathematics, physics, chemistry, botany, and a number of allied sciences; also a special department devoted to cancer research. * * * The university is relatively well provided with laboratories and classrooms; its excellent library is constructed and cataloged on modern lines, and its magnificent site on Mount Scopus possesses ample room for further building when funds permit.

It is remarkable to find on the fringe of Asia a university which maintains the highest standards of western scholarship. On its staff are names well known in Europe and America.

This last sentence has become increasingly true since this report was written in 1937. More and more eminent scholars, who have been forced to leave their posts in Europe, have found a new haven and a new center in which to continue their work. A new medical center with a hospital of 300 beds and all the appurtenant laboratories has now been added to the Hebrew University through the efforts of Hadassah, the American Women's Zionist Organization, working together with the American Physicians' Committee. This structure, completed at a cost of $1,000,000, is the culmination of years of work by Hadassah, which began to send physicians and nurses to Palestine a few years before the World War.

The late Senator Copeland, of New York, himself a physician and a former health commissioner of the city of New York, had the highest praise for the great work done for the health of the country. In an article describing his trip to Palestine in 1937, he wrote:

Next to the great sanitation work carried out in Panama by American genius, there has been no greater achievement in the field of public health anywhere in the world than the sanitation program put into effect in Palestine by American Jews.

In another of his articles, describing the results of his visit to Palestine, Senator Copeland made this very interesting observation:

As our survey progressed, it became ever clearer to us that the Jews brought to Palestine an improvement in social welfare which is still undreamed of in the neighboring countries. They poured into the desolate Holy Land their boundless energy, large sums of capital, and scientific abilities. Within 15 years, the Zionist pioneers raised the standard of living of the entire population to a level which stands high above that of the Asiatic environment.

On page 124 of its report the Palestine Royal Commission makes this observation:

It is impossible, we believe, for any unprejudiced observer to see the National Home and not to wish it well. It has meant so much for the relief of unmerited suffering. It displays so much energy and enterprise and devotion to a common cause. Insofar as Britain has helped toward its creation, we would claim, with Lord Balfour, that to that extent, at any rate, Christendom has shown itself "not oblivious to the wrong it has done."

On page 129 of its report, the Royal Commission summarizes its conclusions as to the advance made by Palestine on account of the establishment of the Jewish National Home:

(1) The large import of Jewish capital into Palestine has had a general fructifying effect on the economic life of the whole country.

(2) The expansion of Arab industry and citriculture has largely been financed by the capital so obtained

(3) Jewish cultivation has done much to improve Arab cultivation, especially citrus.

(4) Owing to the Jewish development and enterprise, the employment of Arab labor has increased in the urban areas, especially in the ports.

(5) The reclamation and antimalarial work undertaken in the Jewish "colonies" have benefited Arabs in the neighborhood.

(6) Institutions founded with Jewish funds primarily to serve the national home have also served the Arab population. Hadassah, for example, treats Arab patients, notably at the tuberculosis hospital at Safed, and the radiology institute, at Jerusalem, admits Arab countryfolk to the clinic of its rural sick-benefit fund, and does much infant-welfare work for Arab mothers.

(7) A general beneficent effect of Jewish immigration on Arab welfare is illustrated by the fact that the increase in Arab population is most marked in urban areas affected by Jewish development. A comparison of the census returns in 1922 and 1931 shows that 6 years ago the increase percent of Haifa was 86, in Jaffa 62, in Jerusalem 37, while in purely Arab towns such as Nablus and Hebron it was only 7 and at Gaza there was a decrease of 2 percent.

Every bit of land that the Jews in Palestine occupy has been obtained by purchase, and always at a high price. It is estimated that since the World War Arabs have collected from Jews the equivalent of $50,000,000 for land sold to Jews. For the period of 16 years, up to 1937, Jews have acquired 682,000 dunams—about 175,000 acres—of land, at a cost, according to the registered value, of £7,731,000—about $38,655,000. Land acquisitions during this period have averaged 43,000 dunams—about 10,750 acres—annually. At this rate, it should be observed that it would take 150 years to purchase half the land of Palestine, or 300 years, if the southern districts of Bersheeba and the Negeb are to be included.

Even at high prices, Jews usually got poor land—swamp or sand dunes. Most of this area became good land as a result of intelligent work and effort. And all this effort has not been the cause of ousting any number of the Arabs from their land. The Palestine Royal Commission, on page 240 of its report, points out that while 3,271 applications for resettlement were received by the Government up to January 1936, only 664 were admitted to the register, 2,607 being disallowed.

As indicated above, American Jews have participated to a very important degree in the work of building up the Jewish homeland. About 12,000 American Jews have settled in Palestine, bringing with them the sum of $80,000,000 in the form of gifts and investments. They have given the country the benefit of American learning and experience, but their presence in Palestine has been encouraged by the stand of the American Government in favor of the Jewish homeland.

Opposition to the continuance of the Jewish homeland is being raised by certain elements of Palestinian Arabs. The objections are based upon a claim that Palestine was included in the area promised by Sir Henry McMahon, the British High Commissioner for Egypt, to King Hussein, of Mecca, in negotiations seeking to induce the Arabs to join the British against the Turks. This correspondence took place in 1915. The main body of this correspondence has remained a secret up to a month ago, when a large part of it was published by a committee, consisting of British officials and some Arab representatives who attended a conference held the early part of this year at London. However, the correspondence, so far as it affects the areas involved, has been known as far back as 1922, when Arabs first made the claim to the British Government that Palestine was included in the territory to become part of an Arab state. It has always been known that there were certain reservations made in the McMahon-Hussein letter, excluding certain specified territory and also territory in which there were arrangements made with the French Government.

The British have always contended that western Palestine was excluded. Sir Henry McMahon wrote in a letter dated as recently as July 23, 1937, in the London Times:

I definitely and emphatically must declare that the promise to King Hussein for independence did not include Palestine. I also had every reason to believe that at the time the fact that Palestine was not included in this pledge was well understood by King Hussein.

It should be noted that the entire correspondence that the British had upon this subject and the whole discussion took place with King Hussein of Arabia. The Arabs of Palestine were not a party to it. They do not appear in it at all. The only persons on the Arab side qualified to tell what the intentions were at the time are King Hussein and his representatives.

The official Arab view of the Balfour declaration with respect to Arab territory was expressed by Emir Feisal, the son of King Hussein. Feisal was for a short time after the close of the World War King of Syria until he was expelled by the French and later became King of Iraq when that State was set up in a treaty with the British. During the Arab rebellion he was the commander of the Arab forces and was the chief Arab collaborator with Lawrence. At the peace conference he was the head of the Arab delegation. In a letter to Professor Frankfurter, dated March 1919, Emir Feisal wrote:

> The Arabs, especially the educated among us, look with deepest sympathy on the Zionist movement. Our deputation here in Paris is fully acquainted with the proposals submitted yesterday by the Zionist organization to the conference and we regard them as moderate and proper. We will do our best, insofar as we are concerned, to help in their attainment; we will offer the Jews a hearty welcome home.

There is no mistaking this letter and the sentiments here expressed. Emir Feisal was in the best position to know what lands had been promised to the Arabs by Sir Henry McMahon. He was close to the transaction, and this letter, written at a time when the whole transaction was fresh, makes it clear that the official Arabs understood what Sir Henry McMahon, in his letter to the London Times, says they understood—that Palestine was not to be included in the Arab lands.

The recent publication by the British of the McMahon-Hussein correspondence has not added anything to what was already known. All the years of secrecy have given this correspondence a mystery which made it look more formidable than now appears to be warranted.

The British are correct when they make the assertion that it was the victory of the Allies which freed the Arab states. It is perfectly obvious that if General Allenby had not succeeded in defeating the Turks in Palestine that all the efforts made in Arabia by Lawrence and his followers would have come to naught. It does not in any way minimize the brilliance of Lawrence's achievements to point out that the whole Arabian revolt was not the main issue in the Near East campaign. The real test was in Palestine and the fighting there was done by British troops.

Even on this front there were no Palestinean Arabs on the allied side. One of the things that stands out clear in Lawrence's Seven Pillars of Wisdom is that the Arabs who fought with him came from Arabia itself and from Trans-Jordan.

This is further brought out by the British War Premier, Lloyd George, in his book entitled "Memoirs of the Peace Conference." In volume II, page 665, he writes:

> The Arab uprising led by the Sherif of Mecca and his sons took place in 1916. It was financed and equipped by Great Britain. Warriors from oasis and desert flocked to the standard of independence. * * * The Arabs of Palestine who might have been helpful in many ways were quiescent and cowering. Right through the war and up to the end there were masses of Arab soldiers from Mesopotamia, Syria, and Palestine in the Turkish armies fighting against the liberation of their own race.

He treats this subject of Arabic participation in greater detail on page 668 of the same book, where he writes:

> What the Arabs are apt to overlook is the fact that their contribution in the conquest of Palestine and Syria was almost insignificant when compared to that of the British Empire. The Arabs only claimed that their army mustered in all a force of 100,000 light cavalry. Eastern arithmetic is proverbially romantic. * * * The number of troops which Britain put into the Turkish campaign varied from time to time, but the aggregate British forces which attacked Turkey on all fronts and which finally overwhelmed its resistance numbered 1,400,000 men. These numbers had been on the British pay roll, which we know to our cost to this day is not compiled from an imaginary list of warriors. In addition to this immense army there was the indispensable action of the British Navy, which alone enabled these masses with their tremendous equipment to be transported to otherwise inaccessible battle areas.

As a reward for their participation in the war, the Arab peoples have received an area of 1,000,000 square miles, equal to one-third of the area of continental United States, a great deal of it country of immense possibilities. There are three independent kingdoms—Arabia, the ancestral home of the Arabs; Iraq, an immense country that once supported millions of people when it was the seat of the great empires of antiquity, Assyria and Babylon, and today the possessor of the great Mosul oil field; and Transjordan, twice the area of Palestine, with a more fertile soil and a better rainfall, and it, too, was a land which once supported a great population. In addition to this, two Syrian states have the prospect of soon becoming independent. They have a marvelous country with the climate equal to the best of the Temperate Zone, with mountains and plains and rivers and immense possibilities for an industrious people.

Lloyd George, in volume II, on page 723, of his Memoirs of the Peace Conference, points out how well the Arabs fared as a result of the war:

> No race has done better out of the fidelity with which the Allies redeemed their promises to the oppressed races than the Arabs. Owing to the tremendous sacrifices of the Allied nations, and more particularly of Britain and her empire, the Arabs have already won independence for Iraq, Arabia, Syria, and Transjordania, although most of the Arab races fought throughout the war for their Turkish oppressors. Arabia was the only exception in that respect. The Palestinean Arabs fought for Turkish rule.

And it only needs to be added that if Turkey had won the war, in all probability not one of these Arab states would have had the slightest semblance of freedom. Undoubtedly they would have remained what they were before the war—slaves ground under the heel of their oppressor.

If the Arabs had only Palestine to look forward to, there might be some ground for complaint, but they have this immense empire of which a generation ago the more practical of them could not even have dreamed. They have not begun to develop this empire, and their opportunities have been far greater than those of the Jews in Palestine.

The total area of Palestine is 10,000 square miles. Ten thousand miles as against 1,000,000 miles.

To say that the Arabs ruled Palestine is to misquote history. For the past five centuries it was a Turkish province. This question is discussed by the Palestine Royal Commission on page 40 of its report:

> Palestine was different from other Turkish provinces. It was, indeed, unique both as the Holy Land of three world religions and as the old historic homeland of the Jews. The Arabs had lived in it for centuries, but they had long ceased to rule it, and, in view of its peculiar character, they could not now claim to possess it in the same way as they could claim possession of Syria or Irak.

In an attempt to appease elements which have been creating disturbances and terror in Palestine there have been proposals which would in effect retard the growth of the Jewish national home. These are embodied in a White Paper issued by the British Government on May 17 as its proposal for the settlement of the Palestine problem.

The plan set forth in this document is that at the end of 10 years an independent state shall be set up in Palestine; that the Jews shall remain a minority in the country; and that immigration of Jews shall be limited to 75,000 for the next 5 years, further immigration to be dependent upon Arab consent. The high commissioner is given power to restrict land sales to Jews. There are formal pronouncements for the protection of the Jewish National Home.

The most casual examination of this project shows a complete reversal of the policy of Great Britain to the Jewish homeland. The reversal is most noticeable with respect to immigration. The policy on immigration was clearly enunciated in 1922 in the Churchill statement of policy, as follows:

> For the fulfillment of this policy (the Government's policy with regard to the Jewish homeland) it is necessary that the Jewish community in Palestine should be able to increase by immigration. This immigration cannot be so great in volume as to exceed whatever may be the economic capacity of the country at the time to absorb the new arrivals.

Two principles stand out in this statement. There is the recognition of the fact that if there is to be a Jewish National Home, there must be Jewish immigration to make it possible, and that the determining factor of the quantity of the immigration shall be based upon the formula of the "absorptive capacity of the country." Upon this basis it has been the practice in the past for the Government to issue the quota of immigration certificates for each 6 months.

This new plan to arbitrarily limit immigration will slow up the development of the country. With the increase of population in Palestine there has been a corresponding increase of wealth and new and increased possibilities for more immigrants. The prospect that the Jews have now to look forward to is that at the end of 5 years all Jewish immigration will be stopped, for it is next to impossible to believe that consent to further Jewish immigration can be expected from the Arabs.

When the Balfour declaration was issued, it was not intended to establish another ghetto in Palestine. To add to what has already been quoted on this subject, President Wilson's statement of March 5, 1919, found in the Palestine Royal Commission's report on page 34, ought to make this matter clear to Americans. President Wilson said:

> I am persuaded that the Allied Nations, with the fullest concurrence of our Government and people, are agreed that in Palestine shall be laid the foundation of a Jewish commonwealth.

The Jewish population of Palestine has grown from 55,000 in 1918 to its present figure of 450,000. The Arab population has risen from 400,000 in 1920 to about 950,000, an increase of over 50 percent in 17 years. Under Turkish rule the population was almost stationary.

From all this it follows that since the Jewish population will not be allowed to increase by more than 75,000, and since there will be no restriction placed upon Arab immigration, the Jewish National Home will soon be swamped by the surrounding non-Jewish population, and Jews will properaly feel that they have been led into a trap by promises that they would be able to build up a commonwealth, and instead find themselves an ever-decreasing minority, subject, as in Europe, to the whims of an often unfriendly or hostile majority.

Technical protection that is given the Jewish homeland may very well turn out to be of no more value than the proverbial scrap of paper. Minority rights have come to be a phrase without any real meaning. Jews have had ample experience in this direction.

There is precedent for believing that a minority in an Arab-dominated Palestine would not fare well, regardless of what form their legal rights might take. There is the glaring example of what has occurred to the Assyrians in the neighboring country of Iraq. The Assyrians are a remnant of that proud race which once ruled Mesopotamia. Their ancestors established the great empires of that region. Greatly reduced in numbers, they occupied territory in the kingdom of Iraq. Unlike the great majority of the inhabitants of that country, they are Christians whose Christianity dates back to the second or third century. They have suffered terrible persecutions on account of their religion for centuries, but it was under the kingdom of Iraq that they faced extermination. The interference of the League of Nations saved a small remnant of 10,000, who are now living in Syria, and these people are disturbed at what may happen to them when France leaves Syria and they are again a small minority in an Arab state.

It is idle to suggest that if the British could remain in Palestine they would be able to protect Jewish rights. The British were still in Iraq and were unable to save the Assyrians. It is too slender a thread upon which a people can hope to continue its existence. If the world is in earnest regarding its promise to the Jewish people, and the acceptance of the mandate by 52 nations includes most of the world, then the least that can be done is to permit the work of building the Jewish National Home in Palestine upon the firm foundation of the provisions of the mandate.

Although it is not directly connected with the discussion of the Jewish homeland, it might be well to point out to the Christian Arabs of Palestine that they should consider seriously this experience of the Christian Assyrians in the neighboring Iraq. The Palestine Christians are a minority, a much smaller and a much weaker minority than the Jews of Palestine. It does not seem to be the height of good judgment and good tactics for the Christian Arabs of Palestine to be the forefront of this struggle to bring about the Mohammedan domination of Palestine.

One of the arguments advanced for the curtailment of Jewish immigration into Palestine is that the country is already overcrowded. This was the tenor of a report by Sir Hope Simpson as far back as 1930. The government at that time rejected this report, and time has shown that this rejection was correct, as 150,000 Jews and an equal number of Arabs have entered the country since that time, and there are still large stretches of vacant land in the country capable of development and settlement by large population.

The Jewish development of the country has demonstrated as correct the figures on population possibilities of Palestine as set out in the Zionist declaration, submitted to the peace conference. This document reads as follows:

> The population of Palestine in the days of Christ, before the present scientific methods of cultivation were thought of, and when the external trade was not comparable to that now enjoyed in Palestine, amounted to 4,000,000. Evidence was given at the peace conference that in the population of Lebanon, which resembled Palestine in many respects, had a density of 160 per square kilometer. The population of Palestine is only about 50 per square kilometer. On that basis there is room in Palestine for an increase of 3,000,000 without encroaching on the legitimate interests of the people who are now there. Italy, where the conditions are not unlike those of Palestine, in that it is a mountainous country with no minerals, has a population per square mile three times that of Palestine. On the Italian basis, Palestine ought to provide accommodation for a population of 4,000,000.

From this it is apparent that it is entirely within the bounds of possibilities to absorb within 1 year the 100,000 refugees which the Jewish Agency for Palestine says can be accommodated, and also the 10,000 refugee children for whom homes are already provided.

The establishment of the Jewish National Home has been endorsed by the 52 nations which approved the mandate. They acted after long and careful study. The American Congress unanimously adopted the Lodge-Fish resolution after an extended hearing before the House Committee on Foreign Affairs. Five Presidents of the United States have spoken in unmistakenly glowing terms of the accomplishments of Jewish Palestine. American legislatures, including my own State of Massachusetts, have adopted resolutions favoring the reconstitution of the Jewish commonwealth. Distinguished Americans from all walks of life have expressed their approval of the work that Jews have done in Palestine toward the upbuilding of the Jewish homeland. All these responsible nations, high government officials, legislative bodies, and distinguished personalities have acted with great deliberation. It is impossible to believe that such a distinguished company can all be wrong.

It is quite natural that the liberal forces of our country should be so outspoken in favor of the re-creation of the Jewish National Home. The struggles of the Jewish pioneers in Palestine are a repetition of the hardships endured in the settlement of our own country.

As a Bible-reading and a Bible-loving people, we cannot help recalling that it was in Palestine in the days of the Jewish commonwealth that the prophets enunciated those great principles of human rights which are the very foundation of the democratic ideal. The Pilgrim Fathers, in founding my home State of Massachusetts, built these prophetic principles into the government which they established. Other colonies based their governments upon the same ideals. These same principles, extended and developed by American colonial experience, have become an integral part of the Constitution of the United States and have contributed greatly to the modern democratic processes of our Government, under which personal liberty and individual human rights are guaranteed and protected.

Today a new democracy is growing up in the Jewish homeland in Palestine, founded upon these same principles. This infant democracy has withstood the test for the past 3 years, in which it has had to struggle against the forces of terror unleashed by hatred and allied to the medieval reaction of

totalitarianism. Throughout these 3 years the Jewish homeland has stood firm in its defense and resisted every attack. Fighting only in self-defense, the Jews of the homeland have shown that they are firmly rooted into the sacred soil. They have shown that they are capable of maintaining themselves. Our great country, founded upon the principles of freedom and justice, should extend every possible aid to this new democracy, the Jewish homeland, and exert every possible effort to prevent the attempt to curtail its continued development.

The Neutrality Bill

EXTENSION OF REMARKS

OF

HON. WESLEY E. DISNEY

OF OKLAHOMA

IN THE HOUSE OF REPRESENTATIVES

Thursday, July 6, 1939

ARTICLE BY DAVID LAWRENCE

Mr. DISNEY. Mr. Speaker, under leave to extend my remarks in the RECORD, I include therein the following article by David Lawrence, which appeared in the Washington Evening Star of July 5, 1939:

[From the Washington Evening Star of July 5, 1939]

HOUSE PLAYS INTO HANDS OF DICTATORS—MANDATORY EMBARGO SEEN AS CURB ON DEMOCRACIES' SUPPLIES

(By David Lawrence)

Cables from Rome and Berlin express liking for what the House of Representatives did the other day in its so-called neutrality bill and cables from London and Paris do not.

Anybody who says America, and particularly the House of Representatives, isn't taking sides already in the world crisis just isn't realistic. That's why the administration, which has all along drawn a distinction between totalitarian states and democracies, feels deeply the rebuff which the House gave to the policy which has for the last 3 years been conducted by the Department of State under Secretary Hull—a policy of open sympathy with the democracies as against dictatorship.

In many respects Mr. Hull is one of the most outstanding men in the country, having earned the respect of Republicans as well as Democrats. His course of action throughout the European crises of the last 3 years has been one of stanch Americanism. He has not approved by any means some of the steps taken by the British and the French, but he has disapproved even more what the dictatorship states have done.

Under the circumstances to find the House of Representatives openly taking sides with the Nazis of Germany and the Fascists of Italy in the all-important matter of neutrality is to bring clearly into view how difficult it is for the foreign policy of the United States to be conducted these days. The Constitution gives to the President and the Secretary of State the rights to make foreign policy and gives to the Congress the right to declare war. The controversy today is over the steps which might lead America into war against her will through a set of circumstances operating in the period prior to the outbreak of a world war.

HULL CONVINCED PEACE DESIRED

Mr. Hull is convinced that the American people want peace; that they do not want a single drop of American blood spilled in aid of either side in Europe's quarrels, and that not a single soldier or sailor should be pledged to go overseas again as in 1917.

But how to keep America out of a world war, how to keep American troops and sailors from being drawn into the combat in Europe? This is the central question on which opinions differ. In fairness to the men who voted last week to prohibit the shipment of arms and munitions to European countries in wartime they think this is one way to keep America out. But in all sincerity the administration thinks this is the very way to bring on war.

The reason for these differences is that a propaganda has been widely spread that if the United States had not shipped munitions to Europe in the last war there would have been no German submarine attacks on American ships, and the United States would not have been involved. The fact is the German Navy attacked every vessel, whether or not it carried munitions. Ships flying the American flag and destined for neutral countries like Sweden and Denmark were blown up at sea. The German command in effect was that neutral countries give up the right to travel on the ocean. This the United States refused to do.

UNITED STATES WOULD FIX ZONES

Today the administration is willing to agree to a provision which shall keep Americans from traveling in combat zones but is not willing to surrender to any foreign government the right to say whether these zones shall be 3 miles outside of this country en route to South America or whether the zones shall be 3,000 miles away.

Of more immediate importance is the fact that America is the supply house of the world. If Germany objects to American cargoes, the objection can be raised against American wheat and corn and materials needed to supply civilian populations abroad as much as against actual war implements. The House last week by its bill barred munitions but not airplanes. This shows the embarrassment which legislators can make when they do not permit the President and Secretary of State to conduct foreign relations. For while Congress has the right to declare embargoes relative to wartime, there is no justification for writing embargoes into law now unless it is to notify one side or the other of the help they might possibly expect. To say to Germany and Italy that part of the British and French supply house will be shut off is to take sides.

To stand on the established principles of international law and to notify the world that the Congress will meet at the outbreak of a world war, giving due weight to the circumstances existing at that time, is to follow historic and traditional American policy. Any other course means misunderstandings and encouragement for one side or the other.

ANSWER READ BY ACTION

What the House has done at this time is being construed in Germany and Italy as help for them and a refusal of help to Britain and France. This tends to encourage the war-seeking elements in the dictatorship states, who are being asked to believe again as were German militarists in 1914, that under no circumstances or provocation would the United States give any help to the Allies.

A movement to embargo arms and munitions to the Allies from the United States was started in 1914 and became one of the principal issues which divided pro-German and anti-German sentiment in the 3 years preceding the war. The belief that America was pro-German encouraged the Berlin navalists to declare unrestricted submarine warfare and had the effect ultimately of drawing America into the fray in order to protect her rights on the high seas.

To keep out of war absolute neutrality is essential, and the rules are written in the code of international law, which does not require any act of Congress whatsoever to be announced as America's foreign policy till further notice.

The Neutrality Bill

EXTENSION OF REMARKS

OF

HON. JOHN KEE

OF WEST VIRGINIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, July 6, 1939

ARTICLE BY CHARLES G. ROSS

Mr. KEE. Mr. Speaker, under leave to extend my remarks in the RECORD, I include therein the following article by Charles G. Ross, entitled "Neutrality Bill Vote Reveals Partisanship," which appeared in the Washington Evening Star of July 3, 1939:

[From the Washington Evening Star of July 3, 1939]

NEUTRALITY BILL VOTE REVEALS PARTISANSHIP—ONLY SEVEN REPUBLICANS OPPOSED VORYS AMENDMENT

(By Charles G. Ross)

Many of those who voted in the House the other night to cut the heart out of the administration's neutrality bill were inspired, no doubt, by the highest motives. But if you don't believe that sheer partisan politics—the desire to swat the administration—also played a heavy part, take a look at the roll-call vote by which the cutting operation was performed.

The vote was on the Vorys amendment rejecting the proposed outright repeal of the arms embargo in the present law and writing into the pending bill an embargo on the shipment of "arms or ammunition" to belligerent nations. The amendment was adopted by 214 votes to 173.

One hundred and fifty-eight Republicans out of a total party membership of 169 in the House either voted or were paired for the Vorys proposal. Exactly 7 Republicans voted against it.

Talk about politics ending at the water line!

The names of the seven who stayed outside the Republican phalanx deserve to be set down. One of them was BRUCE BARTON, of New York, and the writer records his name here with special pleasure in view of the animadversions in this column last week on a neutrality bill speech by Mr. BARTON. The others were BALL, of Connecticut; COLE, of New York; KEAN, of New Jersey; MAAS, of Minnesota; STEARNS, of New Hampshire; and WADSWORTH, of New York.

DISTINCTION HYPOCRITICAL

What of the bill itself? As was said here recently, the compromise that it seeks to write into the law is thoroughly hypocritical. Whereas the law as it now stands forbids the sale to belligerents of arms, ammunition, and "implements of war," the proposed modified embargo runs only against arms and ammunition. The House says it is all right for the United States to carry on a wartime trade in military airplanes, trucks, and other equipment covered by the phrase "implements of war," but all wrong to sell a "lethal" weapon to a belligerent.

An attempt was made in the House debate to justify this unreal distinction between kinds of weapons on the ground that it would "comfort" our people, and doubtless some of the Members had that notion in mind when they voted for the Vorys amendment. To advance such an argument is to put a pretty low estimate on the intelligence of the people.

The bill as it came out of the House bore little resemblance to the measure which, carrying out the recommendations of the Secretary of State, sought to give effect to a consistent policy—that of permitting belligerents to buy any of our commodities, arms as well as wheat, cotton, scrap iron, or anything else, on the cash-and-carry basis. It would be consistent also to close our markets completely to belligerents, but not even the most ardent isolationist is willing to follow the embargo idea through to its logical conclusion.

BILL NOW HODGEPODGE

What we have in the House bill is a hodgepodge of confusing provisions, written there partly out of a misguided effort to satisfy all parties to the controversy over our foreign policy and partly out of sheer desire to discredit the administration.

It is generally assumed that the snarl produced by the action of the House will prevent any neutrality legislation at this session. The present law, then, with its ban on the shipment of arms, ammunition, and implements of war, will remain. Since the cash-and-carry provisions of this law, applying to all other articles of commerce, expired on May 1 of this year, without renewal, the sale of all these articles can be carried on in the usual way, and all can be carried in American as well as foreign bottoms. In order to gain their ends with respect to munitions, the isolationists pay the price of seeing restrictions removed from ordinary commerce. It may turn out to have been a price dangerous to the peace of the United States.

The worst of the whole sorry business, though, is the encouragement which the House action tends to give the aggressor states of Europe. It is Hitler and Mussolini who are entitled to be "comforted."

The Liquor Situation in the District of Columbia

EXTENSION OF REMARKS

OF

HON. HARRY R. SHEPPARD

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, July 6, 1939

LETTER, NEWSPAPER ARTICLE, AND REPORT

Mr. SHEPPARD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following letter from the District of Columbia Liquor Dispensary Association, together with an article from the Washington Sunday Star of June 11, 1939, and a report of a special committee to the Federation of Citizens Associations of the District of Columbia:

DISTRICT OF COLUMBIA LIQUOR
DISPENSARY ASSOCIATION,
WASHINGTON, D. C., *July 5, 1939.*

Hon. HARRY R. SHEPPARD,
House Office Building, Washington, D. C.

DEAR MR. SHEPPARD: Your kind communication of July 1 received and it is with considerable pleasure I write this acknowledgement.

Yes, we shall be pleased to continue our study of the local liquor situation during the forthcoming recess of the Congress for your use as a basis of legislation during the second session.

In the 10-State survey of liquor-store operation this writer has just completed, it was interesting to note in States not enjoying their own revenue-producing dispensary systems, the trend is toward a simplification of laws governing the existing systems.

In addition to the large quantities of material already furnished you regarding the local liquor situation, and prior to our fulfilling your request for additional findings, I would like to suggest at this time, for your consideration the introduction of adequate legislation providing for the payment in cash upon delivery, of all alcoholic beverages purchased by the retail stores and distributors in the District of Columbia. This measure is an equitable one inasmuch as all purchases of beer are now on the same basis.

In view of the fact you personally appreciate the overwhelming civic, personal, and organization support you are receiving in support of your House Resolution 89, I wish to assure you that no stone will be left unturned in an effort to secure additional support from the same and other sources.

Allow me to wish you every mental and physical comfort during the recess and a completely successful year ahead.

Yours sincerely,

FRASER GARDNER, *Vice President.*

[From the Washington Sunday Star of June 11, 1939]

CIVIC PROBLEMS, CIVIC BODIES—STUDY OF LIQUOR SITUATION ASKED

(By Jesse C. Suter)

LOCAL LIQUOR SITUATION SUGGESTED FOR STUDY

While the Senate District Committee was on Wednesday considering the pending bill to prohibit retailers from purchasing beer on credit, the local liquor situation came in for considerable discussion. Members of the committee were rather critical of the generosity of the A. B. C. Board in the granting of licenses. One Senator expressed the opinion that there were more of such licensed places in the District of Columbia, in proportion to the population, than anywhere in the country.

Senator KING is quoted as saying that he would like to see the House or Senate committee, or the Board itself, give the matter further study. "I don't know who is on the Board," remarked another Senator, "but they have been overgenerous."

Organized citizens, especially in the residential sections, have been complaining of this condition. They have been putting in considerable time circulating petitions of protest against the granting of licenses, but their desires have been, in many instances, ignored by the A. B. C. Board.

Protests of the Board of Library Trustees and the Board of Education against the granting of licenses to applicants for locations near schools, branch libraries, and the central library have likewise been ignored. In some neighborhoods where there have been demonstrated overwhelming opposition to the establishment of such businesses it has been necessary to repeat the fight over and over again as new, or even the same, applicants have sought licenses.

The problem could be handled readily under the terms of the law if the District Commissioners would pass the required restrictive regulations. Congress sought by the A. B. C. law to be relieved of the necessity of frequently considering proposals to amend the law and accordingly gave the Commissioners broad regulatory powers.

The Commissioners have declined to exercise these powers, even though they have been urged to do so by large groups of citizens. Such regulations could create dry zones in residential neighborhoods and dry zones near schools, libraries, and other institutions.

The number of licenses to be issued in various sections could also be regulated under these powers, and a much improved condition created.

As the Commissioners, who for years have been begging for an enlargement of powers, have failed to do anything to improve the liquor situation, civic groups are now urging that Congress take the matter in hand and by appropriate legislation correct some of the evils of which the citizens are complaining. The advocates of the substitution of Government dispensaries for the liquor package stores have been asking for an investigation of this branch of the business. While they have had considerable support, many of the indorsing groups are urging that the entire local liquor business, including the A. B. C. Board itself, be made the subject of a thorough investigation by Congress.

REPORT OF THE SPECIAL COMMITTEE ON THE LIQUOR SITUATION TO THE FEDERATION OF CITIZENS' ASSOCIATIONS

To the Federation of Citizens' Associations:

Your committee on the liquor situation, composed of Messrs. Wilbur S. Finch, Orrin J. Davy, Milo H. Brinkley, Harvey O. Craver, and the undersigned, chairman, met on March 11, 1939, to consider a resolution from the Stanton Park Citizens' Association endorsing House Resolution 89 (76th Cong., 1st sess.), introduced by Mr. SHEPPARD, calling for an investigation and study "of the advisability of the elimination of the present class A liquor stores in the District of Columbia and the establishment of a sufficient number of liquor stores to be owned by the District of Columbia for the purpose of raising revenue for the support of the government of the District of Columbia."

Since the receipt of the above-named resolution, your committee is informed that a number of other associations affiliated with the Federation of Citizens' Associations have taken similar action endorsing said House resolution and several have opposed it.

At the meeting of your committee the following persons were present by invitation and were heard: Messrs. Milton S. Kronheim, president of the Liquor Dealers' Association, and Mr. F. Joseph Donahue, attorney for said association; Messrs. William J. Bartle and John J. Crim, representing the District of Columbia Dispensary Association, and Delegates Walter F. Wasson and Grover W. Ayres.

Also present at said meeting were Delegates W. J. Tucker and A. D. Calvert.

The resolution of Congressman HARRY R. SHEPPARD is designed to initiate an investigation by Congress of the operation of class A (i. e., off-sale) liquor stores, with a view to substituting therefore the so-called dispensary or monopoly system operated by the municipality. In support of this resolution it was testified that there have been numerous violations of the law and regulations by this class of dealers, particularly with reference to telephone deliveries to minors; that comparisons with States which operate the dispensary system show that much-needed revenue is being lost in the District of Columbia, and that under this system a greatly increased revenue to the municipality would result which would eliminate the necessity for the imposition of additional taxes at this time.

In opposition to the resolution it was testified that the business of dispensing liquor off-sale has been conducted in a legal manner; that violations of the law have been very infrequent, and denial is made of the statements that frequent sales have been made to minors; it is asserted that the State dispensary system would be politically dominated, and that the legitimate investments in business running into the millions would be destroyed; and that many persons would be thrown out of work under the dispensary system.

Your committee has considered the various statements made by the persons present at the meeting, as well as additional facts gathered by members of the committee, and believes that an investigation of the sale of intoxicating liquor in the District of Columbia should be made. It is believed, however, that such an investigation should not be confined to class A dealers but should include all phases of the liquor situation, so that when the investigation is held an opportunity will be presented to officially call attention to violations by others than class A dealers. Such an investigation should include but not be confined to class A dealers. It is the scope of the resolution to which we particularly call attention.

Your special committee therefore recommends that the first nine lines of the Sheppard resolution, reading as follows, be stricken out:

"That for the purpose of obtaining information necessary as a basis for legislation, the Committee on the District of Columbia, as a whole or by subcommittee, is authorized and directed to conduct an investigation and study of the advisability of the elimination of the present class A liquor stores in the District of Columbia, and the establishment of a sufficient number of liquor stores to be owned by the District of Columbia for the purpose of raising revenue for the support of the government of the District of Columbia."

And that in lieu thereto the following language be substituted:

"The Committee on the District of Columbia, or a subcommittee thereof, is authorized and directed to conduct an investigation of the present regulation of the liquor traffic in the District of Columbia, including the enforcement of all laws and regulations, and violations thereof, with a view—in case the evidence adduced justifies such action—to recommending amendments to the present law governing the sale of intoxicating liquors in the District of Columbia, which will improve moral conditions generally in the city, give protection to churches, schools, and residential areas, and increase the revenues of the District of Columbia."

As thus amended, your special committee unanimously recommends that the resolution be approved by the Federation of Citizens Associations.

Respectfully submitted.

HARRY N. STULL,
Chairman, Special Committee on Liquor Situation.

Employ Citizens

EXTENSION OF REMARKS
OF
HON. JENNINGS RANDOLPH
OF WEST VIRGINIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, July 6, 1939

EDITORIAL FROM THE DETROIT TIMES OF MARCH 22, 1939

Mr. RANDOLPH. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Detroit Times of March 22, 1939:

[From the Detroit Times of March 22, 1939]

EMPLOY CITIZENS

The Daughters of the American Revolution from California, meeting in convention at San Francisco, have placed themselves firmly on record for preferential employment of American citizens instead of aliens.

This should, of course, be a permanent and inflexible principle in both public and private employment.

It cannot be construed as an attack upon well-behaved, able, or responsible aliens. It must be regarded as a constructive and helpful attitude toward our native and naturalized citizens.

Other countries have strict legislation covering this point. Private corporations must have a stated number of native workers, usually a large majority; aliens are forbidden from seeking employment; they are often prohibited from selling goods or even exhibiting them, as in the case of painters.

It is only in the United States that very little, if any, distinction is made between alien or citizen labor.

In point of fact, if an alien enters the United States for the purpose of earning his bread and residing here, there is no earthly excuse why he should not immediately apply for citizenship. This country gives him his livelihood, his protection, and social atmosphere. The least he can give in return is his formal allegiance, loyally and generously tendered.

American citizenship is a precious and unique benefit. Those who are eligible and fit for it, who have something of value to contribute in human factors, are foolish indeed not to seize eagerly the opportunity of acquiring it.

Let us hire our own, feed our own, educate, encourage, and cultivate our own citizens. We will then be improving and tightening our own bonds between Americans, and making the blessing of American citizenship still more desirable to those whose personal standards enable them to hope for it in due time.

Machinery for Industrial Peace

EXTENSION OF REMARKS
OF
HON. BERTRAND W. GEARHART
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, July 6, 1939

ARTICLE BY JOHN J. STONBOROUGH, OF WASHINGTON, D. C.

Mr. GEARHART. Mr. Speaker, pursuant to the unanimous consent of the membership of this body, a consent but a moment ago expressed, it is my privilege to hand to the Public Printer for inclusion in the CONGRESSIONAL RECORD an article from the capable pen of John J. Stonborough, of Washington, D. C., an article which was heretofore printed in the May issue of the Sign, a national Catholic magazine. Mr. Stonborough is a keen student of industrial relations and a careful observer of international labor trends, a field in which he has long been acknowledged an authority. Whether one agrees with the conclusions which Mr. Stonborough in this article announces, I am sure that that which he has written will constitute a worthy contribution to the literature pertaining to this subject.

Mr. Stonborough's article follows:

MACHINERY FOR INDUSTRIAL PEACE

(By John J. Stonborough)

In the words of Lord Morley, statesman and historian, "Great economic and social forces flow with a tidal sweep over communities that are only half conscious of that which is befalling them. Wise statesmen are those who foresee what time is thus bringing, and endeavor to shape institutions and to mold men's thought and purpose in accordance with the change that is silently surrounding them."

Among the great problems of our time, the problem of establishing and maintaining amicable relations between employers and employed seems of outstanding importance. Anyone who has followed political and labor trends abroad will agree that the deadlock between capital and labor was a major reason for the overthrow of European democracies. It is apparent that the successful functioning of democracy depends primarily upon harmonious relations between those who work and those who direct work. When these relations break down, democracy goes by the board.

Specifically, three causes may be advanced for the breakdown of industrial relations in Europe. First, failure to understand economic realities; second, insufficient emphasis upon democratic and voluntary methods of conciliation and arbitration, which have proven so successful in Great Britain; and, third, insufficient stress upon the common interest which binds all members of the general public.

The lesson we may draw from Europe is that even if the boat is rocked by but a few self-centered hard heads among either capital or labor, the whole boat can be overturned.

The magnitude and intensity of industrial disturbances between 1934 and 1937 and the ensuing diverse suggestions for the regulation of industrial relations demand that impartial thought and careful analysis be given the scope and form of our future machinery of industrial relations and the problem of intervention by a democratic government in labor conflicts.

In order to solve our problem of industrial relations more successfully than others have done, we must develop a better spirit in the conduct of industrial relations and must perfect our machinery for the avoidance and settlement of industrial disputes.

This machinery falls into two distinct parts:

(1) The future machinery for collective negotiations in industry (the development and extension of voluntary machinery for the avoidance and settlement of industrial disputes within separate industries); and

(2) The future role of the Government in industrial conflicts.

What Burke termed "one of the finest problems in legislation, namely, to determine what the State ought to take upon itself to direct by the public wisdom, and what it ought to leave, with as little interference as possible, to individual exertion," is a major difficulty confronting us. At present we hear far too much vague talk about the obvious necessity of capital and labor pulling together, and far too little discussion as to how that is to be achieved.

As a first step it may prove useful to study the conciliation and arbitration procedure of other democratic countries and to see what they have done, so as to guard against and profit by some of the mistakes which they have made; mistakes which in some countries have helped to destroy democracy.

In Canada, as in the case of our railroads, both capital and labor are well organized, and accustomed to collective bargaining. The Canadian Disputes Investigation Act prohibits a strike or a lockout in certain industries until a report on the dispute has been made by a board of conciliation and investigation. Employers and employees alike in these industries must, therefore, give 30 days' notice of any intended change in wages and hours.

The object of the act is to create a delay between the beginning of a difference and the calling of a strike or lock-out; during this interval, the disputants must meet under the supervision of representatives of the general public. The Board, however, has no compulsory power, and once the findings have been published, the disputants are free to declare a strike or lock-out.

Glancing at Norway, we perceive that the parties to a dispute must notify the conciliator 4 days before a strike or lock-out is called. The conciliator may arrange for a conference lasting not longer than a fortnight; after this period he publishes his findings, and if no agreement was reached the disputants can go ahead and strike or lock-out. However, it must be remembered that in the Scandinavian countries for 25 years or more the existence of collective bargaining and written collective agreements has been taken for granted.

Perhaps the most interesting lesson for us is the careful distinction made there between disputes which arise over the meaning and application of an existing written agreement—so-called disputes about "rights," and disputes which arise over the conclusion of a new agreement—so-called disputes about "interests." In the Scandinavian countries differences of interpretation must be referred to a labor court which acts as umpire. It seems sensible to require that disputes which arise because the parties cannot agree on the meaning of a written agreement should be settled by arbitration. Indeed, a very large proportion of all agreements negotiated in our country today contain such requirements.

Looking around, however, we see that strikes have occurred equally in countries where they are prohibited by law, as in Australia, and in countries in which government policy is confined to conciliatory intervention. Any hopes, therefore, that this or that device will completely safeguard the country's industry against future interruption are likely to be disappointed.

It is the habit of consultation that needs to be fostered vigorously; for ultimately it is not the setting up of machinery that creates genuine industrial peace in a democracy but rather the basic attitude which workers and employers take toward one another.

A cursory glance at recent conciliation and arbitration legislation in democratic and nondemocratic countries indicates that the movement toward legislative regulation of collective industrial relations throughout the world has gathered momentum. In this movement two features stand out: The growth of organized conciliation and arbitration procedure, and the growth of coercive government intervention. The establishment of compulsory features in the regulation of industrial relations is due to the fact that all countries desire to set certain limits to industrial warfare. Thus we note that the idea of settling collective disputes through government intervention is steadily developing.

"Naturally," says the International Labor Office's report on collective agreements, "between complete willingness and absolute compulsion there is a whole range of intermediate stages. Many indeed, are the laws which have introduced certain measures of compulsion in conciliation and arbitration systems, such as the obligation to submit to conciliation, the prohibition of industrial disputes during negotiations, the obligation to bear witness before conciliation and arbitration bodies, and so forth. But the contractual character is not compromised by such restrictions, so long as the legal effect of awards depends on their acceptance by the parties to the dispute."

In many democracies industrial strife has been subjected to limitations through State intervention; first, by means of interposing a period of delay between the emergence of a difference and the calling of a stoppage. This period of delay is evident in our Railroad Labor Act, in the Canadian Disputes Investigation Act, in Scandinavia, and in other European countries; second, by outlawing strikes which arise over the application, interpretation, or validity of an existing collective contract. The trend to settle such disputes through labor courts is evident in the setting up of the National Railroad Adjustment Board and the labor courts of Sweden, Norway, Denmark, and several other countries. Up to the present, results have been worth while.

Indeed, it was in the labor legislation of Scandinavia, when compulsory procedure for the adjustment of the latter type of disputes was introduced, that the distinction between disputes concerning rights and disputes concerning interests first made its appearance.

The validation of the National Labor Relations Act established the right to associate and bargain collectively, but in the minds of many people it also gave rise to the dangerous belief that collective bargaining is an automatic guaranty against industrial disputes. Nothing can be further from the truth. Experience here, in England, and on the Continent has shown that even when collective bargaining is fully accepted, the possibility remains that no agreement may be reached, and that resort may be had to industrial warfare.

Industrial peace cannot be attained by merely promulgating a law compelling the employer to deal with the representatives of his employees' choosing. Abroad, therefore, it has long been recognized as vital that collective bargaining, to be really effective, must be supplemented with extensive facilities for conciliation, voluntary arbitration, and union-management cooperation within separate industries. Collective bargaining is but the first step toward orderly industrial relations and lasting peace, but is in itself no guaranty that peaceful negotiations will always prevail.

Broadly speaking, three categories of labor disputes may be distinguished: The first arising over the refusal of an employer to recognize or deal with a union; the second arising over differences concerning the application, interpretation, or validity of an existing collective agreement; and the third springing from differences over a change in an agreement, the renewal of an agreement, or the conclusion of a new agreement.

The National Labor Relations Act fosters the growth of unions, the use of collective agreements, and remedies the cause of the first-mentioned class of disputes. The prevention and settlement of the other two categories, which necessarily increase as unions grow and agreements multiply, have, however, so far not received appropriate attention.

The most important factor in preserving industrial peace is not the past establishment of the right to bargain collectively, but rather today's decision on the scope of our machinery for the peaceful determination of wages, hours, and the settling of grievances.

To be truly effective, the system of industrial peace in a democracy must encompass three vital points. First of these is collective bargaining by organized groups. The British Committee on Relations Between Employers and Employed (Whitley committee) in 1918 gave as its "considered opinion" that "an essential condition of securing a permanent improvement in the relation between employers and employed is that there should be adequate organization on the part of both"; second, Federal laws governing conditions of work and compensation. The Government must, through factory and other codes of social legislation, lay down certain limitations to the subject of employer-employee discussion; third, machinery of negotiation.

The machinery of industrial negotiation must contain provision, first, for the prevention of industrial disputes, and, second, for their settlement. Prevention is obtained when the basic conditions under which work shall be performed are embodied in written agreements, these agreements in turn providing for a standard routine through which all grievances pass without undue delay. Prevention is aided by the establishment of standing joint committees in the well-organized industries, in which differences of opinion are adjusted before they harden into disputes, and the habit of consultation fostered through regular discussion of noncontroversial questions of common interest.

The settlement of disputes arising in spite of written agreements and standing joint committees, divides itself into two distinct classes: Disputes over the interpretation or application of an existing agreement, so-called disputes over "rights" to be adjudicated by an outside authority mutually appointed in advance, and so-called disputes over "interests" involving either a change in agreement, the renewal of an agreement, or the conclusion of a new agreement, to be settled by one of three means—conciliation, Government inquiry, and optional arbitration.

The importance of efficient and appropriate conciliation machinery, and the conditions which such machinery must satisfy cannot be sufficiently stressed. When envisaging a comprehensive system of regular consultation between employers and employees throughout American industry, the establishment of standing joint committees made up of trade-union and trade association representatives to deal not only with controversial subjects such as wages, hours, and the adjustment of grievances, but chiefly with matters of common interest merits consideration. For "we believe that regular meetings to discuss industrial questions, apart from and prior to any differences with regard to them, will materially reduce the number of occasions on which, in view of either employers or employed, it is necessary to contemplate recourse to a stoppage of work" (Whitley Reports).

Considering the role the Government will play in the future, the fact stands forth that while trade-union membership, collective agreements and joint industrial negotiations have made tremendous strides since 1933, Government machinery for preventing or settling disputes has, with the exception of the Maritime Labor Board and the National Labor Relations Board, remained practically unaltered.

In settling disputes between a union and an employer concerning a change in existing conditions not covered by the present working agreement, it might be well to have legislation making it obligatory to inform the United States Conciliation Service, 4 working days in advance of any action, that workers or the employer intend to strike or lockout. Until expiration of that time, it would be illegal to stop work or to lock out the employees.

This would have the desirable effect of enabling a conciliator to arrive on the scene, review the dispute, and make some attempt toward adjustment before negotiations are broken. Although this would create a compulsory step, it would be in the form of "negative compulsion."

In the meantime, an appeal to management and labor to inform the United States Conciliation Service 4 days before the calling of a strike or lockout, thus showing their willingness to have an impartial outsider help them solve their difficulties in a fair way would most likely prove fruitful.

For it is necessary that in conciliation the emphasis be shifted from the remedial to the preventive. In other words, while up to this time the main efforts of the conciliation service have been to remedy a situation once it occurred, the service should now rather be put in a position to prevent such situations.

In this country there is becoming visible a new and distinctive pattern of industrial relations which we must study as it evolves. It is the author's opinion that it will continue to develop along the lines charted in Scandinavia and Canada, and, contrary to certain present trends of public opinion, will not follow the British pattern. In America we have had to compress, within a period of a few years, far-reaching modifications in the relationship between employers and employees, which in England have taken 50 years of gradual change. Legislation can never substitute for organic evolution, and there would seem but little chance that we—though we could easily, by putting a few changes here and there, make our laws and practices identical with Great Britain's—could thereby achieve their present state of responsible industrial harmony.

Further development of industrial peace in this country lies in a wider application of the principles embodied and proved successful in our railroad legislation, in the Canadian Disputes Investigation Act, and in the Scandinavian labor laws. Application of these principles takes cognizance of the fact that in a democracy, the liberty of each group is circumscribed by the liberty of all, and placing equal responsibilities upon the self-governing groups, sees that the general welfare is adequately safeguarded.

Gambling in Wheat

EXTENSION OF REMARKS
OF
HON. CARL T. CURTIS
OF NEBRASKA
IN THE HOUSE OF REPRESENTATIVES
Thursday, July 6, 1939

LETTER FROM ERNEST D. MacDOUGALL

Mr. CURTIS. Mr. Speaker, with reference to the recent news from Louisiana as to the resignation of Dr. James Monroe Smith from the high office of president of Louisiana State University, I wish to call attention to yesterday's issue of the Washington Post, which carries an interesting letter to the editor on this subject by Mr. Ernest D. MacDougall. Under leave to extend my remarks in the RECORD, I submit Mr. McDougall's letter, as follows:

[From the Washington Post]

GAMBLING IN WHEAT

To the EDITOR OF THE POST:

SIR: The few editorials that I have seen on the alleged defalcations of Dr. James Monroe Smith, former president of Louisiana State University, have laid the blame on bad political conditions in that State. Your own editorial goes so far as to give our educational system a clean bill of health. You seem to regard crookedness on the part of educators as exceptional and novel. I quote from your editorial of last Friday, June 30, as to the Dr. Smith case: "Its novel and spectacular features merely serve to emphasize the need of a thoroughgoing political house cleaning in that State."

While I doubt not the need of "political house cleaning in that State" and in many other States, I feel that the real fault lies in our educational system. Our leaders in education have much to do with the formation of public opinion and molding the norms of human conduct. I am unable to believe that our country would be in its present plight if there had been proper leadership in our schools and colleges.

Specifically, as to the Dr. Smith case, this tragedy could never have happened if the schools and colleges had taught the truth about futures trading and the evils of playing the futures market. Yet our teachers and our editors have led us to believe that playing the futures market is a perfectly legitimate thing to do.

The plain truth is that it is nothing but a gambling on price fluctuations. One who buys a wheat-futures contract acquires no title to nor property in any wheat, despite the deceitful wording of the contract. Neither does one who sells a wheat-futures contract convey any title or property whatever. Buyers and sellers alike merely bet on a chance to win on a rise or fall, respectively, of the price of wheat. They deposit the same stakes (margins) for the sole purpose of betting. It is what the courts call gambling under the forms of trade.

If our teachers and our editors would tell the public the truth about futures trading, this nefarious racket would soon blow up. Yet they applaud the practice of playing the futures market, and they play it themselves without compunction of conscience.

I have before me the figures of occupational groups that had "open contracts" in wheat futures and corn futures on the Chicago Board of Trade on September 29, 1934. There are about 600 occupations in the list, many of which represent over 1,000 accounts, and they run from abstractors to yeast makers, including physicians, 523; attorneys, 397; teachers, 163; and clergymen, 25. I omit the editors.

Can anyone seriously contend that these people were doing, or intending to do, anything other than to bet on price changes? Our teachers and our editors have made this evil practice respectable. The only "novel and spectacular feature" about the Dr. Smith case is that he got in so deep he couldn't get out without getting caught.

ERNEST D. MacDOUGALL.

WASHINGTON, *July 1.*

The Neutrality Bill

EXTENSION OF REMARKS
OF
HON. THOMAS F. FORD
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, July 6, 1939

ARTICLE FROM THE BALTIMORE SUN OF JULY 3, 1939

Mr. THOMAS F. FORD. Mr. Speaker, I note that in the July 3 issue of the Baltimore Sun, there appears a special dispatch from Rome, Italy, which indicates clearly that the action of the House, including a limited arms-embargo clause in the neutrality bill passed by that body, was cause for considerable jubilation on the part of the totalitarian powers of Europe.

It occurs to me that a comment on this action is pertinent.

In view of the fact that this embargo clause is limited to lethal weapons, but wide open as regards the constitutent elements that go into the manufacture of these same lethal weapons, including the manufacture of munitions, that the House has assumed the well-known attitude, attributed to the ostrich that is said to seek protection by burying its head in the sand.

I am therefore appending herewith the news item above referred to in the hope that it will be carefully noted and prayerfully considered by Members of another body which will shortly consider this bill and come to a final decision as to its merits, its far-reaching significance, and its possible repercussions.

[From the Baltimore Sun of July 3, 1939]

ROME JUBILANT OVER EMBARGO VOTE IN HOUSE—REGARDS UNITED STATES ARMS BAN AS WELCOME TO TOTALITARIAN POWERS

ROME, July 2.—The congressional rebuff to President Roosevelt over the neutrality bill was front-page news today in Rome, where it was regarded as a most welcome aid to the totalitarian powers.

The view expressed by well-informed Italians was that the embargo on the sale of arms meant that American influence now could be discounted, and there was much satisfaction at the consequent weakening of the position of the western democracies. One Italian described it as "a smashing blow at France and Britain" and predicted that, with their chief source of supplies threatened, they would not dare to oppose the march of the totalitarians to new triumphs.

REALIZE ISSUE IS OPEN

The press was careful not to comment on the action of the House of Representatives. It was realized that the issue was not absolutely settled and that premature jubilation might have unfortunate repercussions in Washington. Hence, as if by signal, the newspapers with impressive unanimity limited themselves to recording the event and the "cruel disillusion" of France.

At the same time, the campaign against the European democracies became more violent, although less well focused. They were accused of both aggression and ineffectiveness, of bellicosity and cowardice.

Urge Enactment of H. R. 2402

EXTENSION OF REMARKS

OF

HON. PAUL W. SHAFER

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Thursday, July 6, 1939

LETTER FROM LOCAL 87 OF THE UNITED FEDERAL WORKERS OF AMERICA

Mr. SHAFER of Michigan. Mr. Speaker, under permission to extend my remarks, I desire to include a letter urging the enactment of H. R. 2402, to abolish compulsory deductions from salaries of employees of the Veterans' Administration for quarters, subsistence, and laundry. A petition, No. 16, to discharge the Committee on Veterans' Legislation from further consideration of this bill is now on the Speaker's desk. The letter follows:

UNITED FEDERAL WORKERS OF AMERICA,
VETERANS' ADMINISTRATION LOCAL NO. 87, C. I. O.,
Danville, Ill., June 28, 1939.

HONORABLE SIR: In behalf of Local No. 87, Danville, Ill., and all locals of the United Federal Workers of America, representing Government employees working in hospitals under the supervision of the Veterans' Administration, we wish to call attention to certain deplorable conditions which affect the lives and happiness of these employees and their dependents.

The nature of the service required of and rendered by employees in veterans' hospitals, both general and psychopathic, is of such importance in the care and treatment of mentally and physically disabled American war veterans as to require skill and training attained only through years of constant and faithful service. This high standard of efficiency has been the goal of the Veterans' Administration since its inauguration, and today hospitalization offered by the Veterans' Administration is second to none.

Employees in veterans' hospitals must be trained to administer occupational therapy, physiotherapy, hydrotherapy, and recreational therapy, and provide the highest standard of sanitation and comfort possible for the beneficiaries. The welfare of the patients comes ahead of every other consideration. The efficiency in these institutions is of a quality beyond the conception of anyone not connected with the service.

However, this high standard of efficiency cannot remain permanent so long as the standard of living forced upon certain employees in veterans' hospitals remains so low that they are unable to provide the necessities of a comfortable living for themselves and their dependents. Nature requires that, in order to be most efficient, one must be comfortable and free from worry. The low-paid employee in these hospitals has sacrificed homestead, savings, insurance, financial credit, and health. Many employees in this category at the Danville veterans' facility have, during the past few years, been obliged to seek the aid of United Charities and other charity organizations for hospitalization and relief for their families. Discontent reigns where the morale should be at the highest.

The basic salary for 60 percent of the attendant personnel in veterans' hospitals is $1,020 per year, or $85 per month. From this amount, deductions as high as $32.50 per month for quarters and subsistence are made, thus leaving in cash, only $52.50 per month. These deductions are made, regardless of whether the facilities are used or not. Married employees, living with their families off the station, are not exempt. Throughout the year, because of annual leave, national holidays, and the scheduled day and one-half off per week, there is total of 104 days of absence, when there is no occasion for using the facilities offered. However, the regular deductions for maintenance are made without exception. Why should the Veterans' Administration be so undemocratic as to dictate to its employees as to where they shall live, where they shall eat, when they shall eat, what they shall eat, and the amount they shall pay?

There is no assurance that a hospital or mess attendant, starting at $1,020 per year, will ever receive a salary increase while in the service of the Veterans' Administration, since it is the policy that 60 percent will be retained in that grade. What is wrong when the high salaries paid to the professional personnel must be maintained at the expense and sacrifice of the underpaid employee? It is explained that salaries are kept on an average basis. No salary increases are forthcoming for the low-wage employee if the high standard of professional personnel is maintained. Why should either be obliged to sacrifice to the other? An adequate appropriation would provide pay increases for the lower bracket, and still maintain the high standard of professional personnel necessary in veterans' hospitals.

Practically all the male employees now working as attendants in the veterans' hospitals are ex-service men, and a very large percent are married and have families to support. They have reached the age when it is difficult to find employment elsewhere. They are resigned to the fact that this will probably be their life's work. Are their military and naval services during the World War and other wars so little appreciated now that they should be paid starvation wages by the Government for which they fought?

We beseech you to lend any possible support to better the wage and working conditions in veterans' hospitals. This appeal comes to you from more than 25,000 employees in veterans' hospitals, a large number of whom are World War veterans. Legislation in the form of several bills have been proposed before Congress, which will tend to correct the grievances herein named.

The required number of signatures on petition No. 16, now on the House Speaker's desk, will discharge House Resolution 2402, a bill intended to abolish compulsory deductions from salaries for quarters, subsistence, and laundry. H. R. 960 is now before Congress for vote. This bill provides civil service and reclassification for Government employees.

Very respectfully yours,

UNITED FEDERAL WORKERS OF AMERICA,
Local No. 87, Danville, Ill.
LOUIS E. LUKE, *President.*
GEORGE S. SULLIVAN, *Secretary.*

Gen. Malin Craig

EXTENSION OF REMARKS

OF

HON. C. ARTHUR ANDERSON

OF MISSOURI

IN THE HOUSE OF REPRESENTATIVES

Thursday, July 6, 1939

EDITORIAL FROM THE WASHINGTON EVENING STAR OF JULY 2, 1939

Mr. ANDERSON of Missouri. Mr. Speaker, within the past quarter century the State of Missouri has seen two of its sons reach the highest pinnacle of military achievement in our country—Gen. John J. Pershing and Gen. Malin Craig.

It is fitting at this, the time of General Craig's retirement, that we take cognizance of the great service he has rendered to our Nation. His distinguished career will long serve as a standard by which his successors through the years will be measured.

As Chief of Staff of our great Army, General Craig has exemplified the tradition of the American Army in the fullest measure. He has at all times looked upon our Army as an instrument to assure peace to our people. General Craig has done more than any other man to keep our Army abreast of the times, and as a fitting tribute to his remarkable ability I include at this point in the RECORD an editorial from the Washington Evening Star of July 2, 1939:

[From the Washington Evening Star of July 2, 1939]

GENERAL CRAIG'S REPORT

In his last report as Chief of Staff of the Army, Gen. Malin Craig has expressed gratification over the current Army expansion program but has coupled with it a warning that much remains to be done before the United States has attained the "position of readiness" deemed essential by those who have given careful study to the problem of America's national defense. Even with completion of the $552,000,000 preparedness program just beginning, he declares, the country still will be considerably short of the security goal hoped for by military experts. The expansion plan about to be carried out under direction of General Craig's able successor, Gen. George C. Marshall, will do little more, the retiring officer asserts, than help the Nation regain the ground it lost during the past decade of defense indifference—a period during which several aggressor nations have been far from idle.

Moreover, as General Craig pointed out in one part of his report, it will take 2 years to transform current appropriations into regiments and arms and planes ready to stand off an invader. Stressing

this time element as a danger too little taken into account by laymen in considering the national-defense problem, General Craig said: "The same persons who now state that they see no threat to the peace of the United States would hesitate to make the same forecast through a 2-year period." During the 2 years of development the Army will enlist 112,500 men, some of whom will fill vacancies; will train more than 2,000 pilots and about 18,000 aviation mechanics; will buy 2,500 more planes; will construct 5 new air bases; and will add to its stores some $186,000,000 worth of guns, shells, and other implements of war.

But that is not enough, says General Craig. Before the American Army is strong enough to protect the country against a modern foe, he states, it must be strengthened along three lines: First, the outer line of defense, extending roughly from Alaska to Panama on the Pacific side and from the Canal through Puerto Rico to the east coast must be strongly fortified and "manned for instant action."

Creation recently of a new department of the Caribbean is a step in this plan. Second, there must be kept always ready to reinforce this outpost line a Regular Army of 5 full divisions, with a strength of 200,000 men, and a National Guard of equal strength. About 1,800 more officers and 23,000 men would be needed to bring the Regular Army to the required strength. Third, arms, supplies of all kinds, and machinery must be provided to expand the Army quickly in an emergency to a million men.

It will take large additional appropriations to achieve such a goal, but, as General Craig plainly hints in his report, there is no real economy in haphazard, hit-or-miss defense planning. A long-range, properly balanced program is the most economical in the long run, and the least dangerous. We are paying heavily today for our failure to give proper attention to defense needs during the years since the World War, when we supposedly learned all about the grim costliness of unpreparedness. General Craig's recommendations are not those of a soldier who has an ax to grind. His advice merits the most earnest consideration of the Nation to which he devoted 45 years of active and distinguished military service.

The Removal of Indian Tribes

EXTENSION OF REMARKS

OF

HON. KARL STEFAN

OF NEBRASKA

IN THE HOUSE OF REPRESENTATIVES

Thursday, July 6, 1939

Mr. STEFAN. Mr. Speaker, the policy of removing Indian tribes from seat to seat, as the white settlements pressed upon them, which was adopted at a very early day, has at all times resulted disastrously to the Indians. It is believed that there are but few instances in which perfect good faith, in all respects, has governed in the removal of a tribe from an old to a new home. In numberless instances removals have been brought about, not because there was a necessity for them, but with a view to the plunder and profit that was expected to result from the operation. A volume could be filled with details of the most unhappy character, growing out of those removals, and in what preceded and followed them, in which the Indians were cruelly treated and the Government defrauded.

A brief extract from a letter written in 1851 to an Indian agent by a member of a firm that had grown wealthy in Indian trade and contracts for transportation and Indian removals will show not only the watchfulness of persons engaged in such transactions but illustrate the mystery of correspondence in relation to operations among the Indians. The extract is as follows:

> During this short session there has been much excitement and but little effected in these Indian matters. Nothing done or moved in the Menominee matters; they are as before, and most likely will remain so for another year. In the meantime, if the President requires them to remove West, the contract for that object will be an object. Colonel Thompson will be at Washington for some time, and so will my brother. Write to them freely; you will find them right and true. If that could be carried out as we talked the matter over, it would result in a good profit. Write to my brother about this. I have said to him what was proposed between you, Wright, and us. * * * I am compelled to go in the morning to St. Louis to provide funds for our transportation contract to New Mexico, and write in haste. Will be back in 20 days. We must try and make this business tell well yet.

In 1863 the Government removed the Santee Sioux and the Winnebago Indians from Minnesota to the Crow Creek Agency, on the Missouri River, about 150 miles above Yankton, in the Territory of Dakota. The guard that accompanied those Indians consisted of 4 commissioned officers, 135 soldiers, and 1 laundress—in all, 140 persons. The number of Santee Sioux transported was 1,318. For the transportation and subsistence of these Indians and the guard there was paid the sum of $36,322.10. The number of Winnebagoes transported was 1,945; for their transportation and subsistence there was paid the further sum of $56,042.60, making the whole amount paid the contractors the sum of $95,864.70.

The Sioux were transported from Fort Snelling to Hannibal, Mo., on two steamboats. One of the boats stopped there, and the Indians on it crossed over to St. Joseph, on the Missouri River, by rail. The other boat continued to the junction of the Mississippi and Missouri Rivers, and thence up the latter to St. Joseph; and here the Indians that crossed over by rail were put upon the boat, and from thence to Crow Creek all of them were on one boat. They were very much crowded from St. Joseph to Crow Creek. Sixteen died on the way being without attention or medical supplies. All the Indians were excluded from the cabin of the boat and confined to the lower and upper decks. It was in May, and to go among them on the lower deck was suffocating. They were fed on hard bread and mess pork, much of it not cooked, there being no opportunity to cook it, only at night, when the boat laid up. They had no sugar, coffee, or vegetables. Confinement on the boat in such a mass, and want of proper food, created much sickness, such as diarrhea and fevers. For weeks after they arrived at Crow Creek the Indians died at the rate of from 3 to 4 per day. In a few weeks 150 had died, mainly on account of the treatment they received after leaving Fort Snelling. They were landed at Crow Creek on the 1st day of June 1863. The season was unusually dry, vegetation burnt up, and no crop growing. Some corn had been planted, but did not get more than 4 inches high before it wilted down.

During the summer the Indians were fed on flour and pork. They got no beef until fall. They suffered for want of fresh beef, as well as for want of medical supplies. In the fall their rations began to fail and the issue was gradually reduced, and the Indians complained bitterly. About the first of September, a train of 100 wagons arrived at Crow Creek from Minnesota, loaded with goods and supplies for the Indian traders, and the Santee Sioux and Winnebago Indians. The only supplies for the Santee Sioux, brought by the train, was flour. It was understood that when the train left Minnesota it contained some corn for these Indians, but none came to Crow Creek Agency. Some pork was brought but none of it was issued to the Santee Sioux; but was issued to individual Indians in payment for work. After the arrival of the train, the ration issued to the Indians was flour and beef. The quantity was very short. The beef furnished was from the cattle that hauled the supplies from Minnesota. These cattle had traveled over 300 miles, hauling the train, with nothing to eat but the dry prairie grass, there being no settlements on the route they came. The cattle were very poor. Some died or gave out on the trip and such were slaughtered and the meat brought in on the train for food for the Indians. About the first of January 1864, near 400 head of the cattle were slaughtered. Except the dry prairie grass, which the frost had killed, these cattle had no food from the time they came to Crow Creek until they were slaughtered. A part of the beef thus made was piled up in the warehouse, in snow, and the remainder, in like manner, packed in snow outside. This beef was to keep the Indians until the coming June. The beef was black and very poor; indeed the greater part only skin and bone. Shortly after the arrival of the train from Minnesota, the contractors for supplying the Indians with flour, took about 100 head of the oxen, selecting the best of them, yoked them up, and sent them with wagons to Sioux City, some 240 miles, to haul up flour. This train returned in February, and these oxen were then slaughtered and fed to the Indians.

In January the issue of soup to the Indians commenced. It was made in a large cottonwood vat, being cooked by steam carried from the boiler of the sawmill, in a pipe, to the vat. The vat was partially filled with water, then several quarters of beef chopped up and thrown into it, and a few sacks of flour added. The hearts, lights, and entrails were added to the compound, and in the beginning a few beans were put into the vat, but this luxury did not continue long. This soup was issued every other day—to the Santee Sioux one day, the alternate day to the Winnebagoes. It was very unpalatable. On the day the Indians received soup they had no other food issued to them. They were very much dissatisfied and said they could not live on the soup, when those in charge told them if they could live elsewhere, they had better go, but that they must not go to the white settlements. Many of them did leave the agency, some going to Fort Sully, others to Fort Randall, in search of food. From a description of this nauseous mess, called soup, given by Samuel C. Haynes, then at Fort Randall, and assistant surgeon in the military service, it is seen that the Indians had good cause to leave Crow Creek. He states that there were thrown into the vat beef, beef heads, entrails of the beeves, some beans, flour, and pork. I think there were put into the vat two barrels of flour each time, which was not oftener than once in 24 hours. This mass was then cooked by the steam from the boiler passing through the pipe into the vat. When that was done, all the Indians were ordered to come with their pails and get it. It was dipped out to the Indians with a long-handled dipper, made for the purpose. I cannot say the quantity given to each. It was about the consistency of very thin gruel. The Indians would pour off the thinner portion and eat that which settled at the bottom. As it was dipped out of the vat some of the Indians would get the thinner portions and some would get some meat. I passed there frequently when it was cooking, and was often there when it was being issued, and it had a very offensive odor; it had the odor of the contents of the entrails of the beeves. I have seen the settlings of the vat after they were through issuing it to the Indians, when they were cleaning the vat, and the settlings smelled like carrion—like decomposed meat. The Santees and Winnebagoes were fed from this vat; some of the Indians refused to eat it, saying they could not do so as it made them sick. The Winnebagoes protested against such filthy cooking, and said they could not eat it; they said it was only fit for hogs, and they said they were not hogs.

No clothing having been issued to the Santee Sioux or Winnebagoes since 1862, they suffered much for want of proper apparel, and from this want, as well as from the lack of food, many were induced to go out on a buffalo hunt. Mr. Williamson, the missionary, went with them, although he was fearful they might perish; yet such were their necessities that he encouraged them to go, fearing that if they did not they would starve before spring. About 300 went out on the hunt in February. Mr. Williamson said that, in his opinion, if all the Santees and Winnebagoes had stayed at the agency during the winter, many of them would have starved to death. They were out about 6 weeks. On their return they found that the issue of soup had ceased, and the ration consisted of flour and beef; the beef that had been packed in snow during the winter. The ration consisted of about one-fourth of a pound of flour and three-fourths of a pound of beef, per head, per day, during the spring and summer. The flour had been hauled some 300 miles in wagons, without cover, and from rainfall on the way, such was the condition of the sacks containing the flour, that after all the loose flour was knocked out of them, some of the sacks weighed 30 pounds. This flour was issued to the Indians at 98 pounds to the sack. It was all inferior flour. During the winter of 1864–65, the beef was killed and packed in the same manner for the Santee Sioux, and the result was that many of the Indians left in search of food. It is stated that many of them went to different points where military expeditions had camped, to pick up the scattered corn that had been left by the horses and mules, when fed, for the purpose of eating it, and also to pick up the dead mules and horses to eat. Mr. Williamson states that such treatment had a demoralizing influence on the Indians, many of the women being compelled to prostitute themselves in order to get something to eat.

The Winnebagoes, not by reason of anything done by them but because of the massacre of the whites by the Sioux in Minnesota in 1862, and the excitement growing out of that sad affair, were compelled to leave their reservation in that State. Congress, in response to the demand of the people in the region in which they lived, passed an act providing for their removal. They had no previous warning and remonstrated against this act of injustice, but their protest was unheeded. They were, as stated, taken on boats and carried down the Mississippi and up the Missouri to Crow Creek. All were dissatisfied with their treatment on the journey and their location at Crow Creek. Much sickness prevailed, and many died. They were living in Minnesota in peace and quiet, and had been so for years. They had made considerable advancement in civilization. Many of them had farms and houses and had acquired habits of industry and economy. Such was their dissatisfaction at Crow Creek that large numbers of them during the summer and fall made their way down the Missouri in canoes, landing at different points, where they managed to live through the winter of 1863–64. It is said that at the time of their forcible removal they were supplied with grain stock, implements of husbandry, and so forth, most of which were stolen or destroyed, since they were unable to take their property with them. Little Hill, a Winnebago chief, thus told the story at Dakota City, Nebr., to a member of the joint committee of Congress, charged with the investigation of Indian affairs in 1865. The chief said:

You are one of our friends, as it appears. We are very glad to meet you here. Here are some of our old chiefs with me, but not all. And we will tell you something about how we have lived for the 4 years past. Now, you see me here today. Formerly I did not live as I now do. We used to live in Minnesota. While we lived in Minnesota we used to live in good houses and always took our Great Father's advice and did whatever he told us to do. We used to farm and raise a crop of all we wanted every year. While we lived there we had teams of our own. Each family had a span of horses or oxen to work and had plenty of ponies; now we have nothing. While we lived in Minnesota another tribe of Indians committed depredations against the whites, and then we were compelled to leave Minnesota. We did not think we would be removed from Minnesota, never expected to leave; and we were compelled to leave so suddenly that we were not prepared; not many could sell their ponies and things they had. The superintendent of the farm for the Winnebagoes was to take care of the ponies we left there and bring them on to where we went, but he only brought to Crow Creek about 50, and the rest we do not know what became of them. Most all of us had put in our crops that spring before we left, and we had to go and leave everything but our clothes and household things; we had but 4 days' notice. Some left their houses just as they were, with their stoves and household things in them. They promised they would bring all our ponies, but they only brought 50, and the hostile Sioux came one night and stole all these away. In the first place, when we started from Minnesota they told us they had got a good country for us where they were going to put us. After we got on a boat we were as though in a prison. We were fed on dry stuff all the time. After we got there (to Crow Creek) they sometimes gave us rations, but not enough to go round most of the time. Some would have to go without eating 2 or 3 days. It was not a good country; it was all dust. Whenever we cooked anything it would be full of dust. We found after a while that we could not live there. Many of them (the women and children) died because they could not get enough to eat. We do not know who was to blame.

They had a cottonwood trough made and put beef in it, and sometimes a whole barrel of flour and a piece of pork, and let it stand a whole night, and the next morning, after cooking it, would give us some to eat. We tried to use it, but many got sick on it and died. I am telling nothing but the truth. They also put in the unwashed intestines of the beeves and the liver and the lights, and after dipping out the soup the bottom would be very nasty and offensive. The pork and the flour that we left in Minnesota that belonged to us was brought over to Crow Creek and sold to us by our storekeepers at Crow Creek. For myself, I thought I could stay there for a while and see the country. But I found it wasn't a good country. I lost six of my children, and so I came down the Missouri. When I got ready to start, some soldiers came there and told me if I started they would fire on me. I had 30 canoes ready to start. No one interceded with the soldiers to permit me to go; but the next night I got away and started down the river, and when I got down as far as the town of Yankton I found a man there and got some provisions; then came on down farther

and got more provisions, and then went on to the Omahas. After we got to the Omahas somebody gave me a sack of flour, and someone told us to go to the other side of the Missouri and camp, and we did so. We thought we would keep on down the river, but someone came and told us to stay, and we have been there ever since.

Little Hill's narrative is quite lengthy, and in all its parts is corroborated by Big Bear, Little Chief, and Decorah, all Winnebago chiefs. Big Bear, in his testimony, contrasts the treatment of the Indians with what it was "many years ago," when they lived in the State of Iowa, "when the men used to get two pairs of blankets apiece, but we do not know," said he, "what becomes of the goods now."

The story of these Indians is a sad but a truthful one; and is, in a certain sense, the story of all Indian removals; for, while precisely the same train of events may not have marred the pathways of all Indians in the process of removal, and the incidents preceding and following, yet all have suffered seriously, many being subjected to barbarous and inhuman treatment. When attempts have been made to remove an Indian tribe with fidelity, and to extend to the Indians on the journey the semblance of such treatment as is due to human beings—such cases being exceptional—disaster, discomfort, and suffering have been experienced. With such incidents repeated frequently in the life of each generation, as tokens of our civilization, should we be surprised that the savage is distrustful of us, and hesitates to accept as genuine our professions of friendship? The joint committee of Congress that investigated the transactions connected with the removal of the Santee Sioux and Winnebago Indians, in reporting upon the case, said:

> Of one thing we may be assured, that no government can permit such injuries to go unredressed without incurring the penalty of treaties broken and justice violated.

This committee gathered a vast amount of testimony in relation to our Indian affairs in all sections, from the Mississippi River to the Pacific Ocean, wherever Indians were located, and, among other things, came to the conclusion that in a large majority of cases Indian wars were to be traced to the aggressions of the whites, and that such wars were very destructive, not only of the lives of the warriors, but of the women and children also, often becoming wars of extermination. The committee says:

> The indiscriminate slaughter of men, women, and children has frequently occurred in Indian wars.

As a remedy for existing evils this committee proffered a bill to Congress, creating five boards of inspectors of Indian affairs, each to have a section of country within the States and Territories inhabited by Indians, composed of "men of high character, and organized in such manner and clothed with such powers as to supervise and inspect the whole administration of Indian affairs in its threefold character—civil, military, and educational." The report of the committee, with the testimony taken by it, forms a volume of more than 500 pages, which may probably be found stowed away in the document room at the Capitol in Washington, but the grave matters to which it called attention have met with the same fate that kindred subjects, in previous and subsequent reports, involving the interests of a race, have received. Congress has signally failed to do its duty in the premises.

The constant agitation for the removal of Indian tribes has a very pernicious influence on the Indians. This agitation is kept up by the white people who live adjacent to and desire to possess themselves of the Indian lands. Unfortunately, Congress seems ever ready to gratify the desire of the whites to bereave the Indian of his home. A few examples of the effect produced by such agitation are here presented from the annual report of the Honorable E. A. Hayt, Commissioner of Indian Affairs for the year 1877:

> The agent of the Selitz Agency in Oregon says:
> "Hearing, as they constantly do, the Government is soon to drive them from the land they now occupy, in order to make room for the whites who want homes, they sometimes get discouraged and conclude it is useless to improve what they are so soon to vacate."

The agent of the Grand Ronde Agency in Oregon says:

> The Indians in this agency are kept in a constant state of insecurity by reports of whites with whom they come in contact, to the effect that they are soon to be removed.

The agent at Fort Defiance, Ariz., says:

> The Indians are much attached to their homes and dislike the idea of removal.

The agent of the Kickapoos, in Kansas, says:

> Many practical and progressive Indians have been discouraged and deterred from making improvements upon which they had determined, through fear that they would not be allowed to enjoy the benefit of them.

The agent of the Otoe Indians, in Nebraska, says:

> The subject of removal that has been agitating these Indians for a number of years has prevented, to a very great extent, active improvements among them.

It will not be necessary to make further quotations from similar reports, to call the attention of all reflecting people to the subject in order that the bad influences growing out of Indians' removal may be understood. As a general thing there is no valid argument in favor of the removal of a tribe when they are favorably located on land on which they can make their support. Removals simply to oust the Indians and let the whites have their land must come to an end. Every consideration founded in economy, justice, and humanity demands that the Indian have a fixed and settled home—to be, in fact, permanent. Without it his doom is sealed, and the extinction of the race only a question of time. With a permanent home, fair dealing, and just treatment the civilization and elevation of the race in the social scale is assured. Let it once be proclaimed as the unalterable law of the land that Indian removals must cease; that the settler's patent is not more sacred than the Indian title to his land; that his home is his castle, and the stride of the red man on the road of progress will astonish his white brother, and ere long, instead of the constant pressure to remove him from his home, he will have the confidence and even sympathy of his white neighbor.

When the commission appointed to endeavor to compose the trouble with Joseph's Band of Nez Perce Indians—in relation to the Wallowa Valley in Oregon, claimed by this band—held council with them in 1876 and asked them to abandon their claim to the valley, within which few whites were settled, that chief said:

> The earth was his mother. He was made of the earth and grew up upon its bosom. The earth, as his mother and nurse, was sacred to his affections, too sacred to be valued by or sold for silver or gold. He could not consent to sever his affections from the land that bore him. He asked nothing of the President. He was able to take care of himself. He was disposed to live peaceably. He and his band had suffered wrong rather than do wrong. One of their number was wickedly slain by a white man last summer, but he would not avenge his death. But unavenged by him, the voice of that brother's blood, sanctifying the ground, would call the dust of their fathers back to people the land in protest of this great wrong.

The attachment exhibited by Joseph for the land on which he was born is common to all Indians, and the sentiments uttered by the chief indicate that with proper helps toward civilization the race to which he belongs might become an element in our society, not only bearable but desirable. When this chief or some of his people, driven to desperation by oppression, and the forcible attempt to compel them to yield up the Wallowa Valley, rose in resistance, took the lives of some of the white settlers and then commenced that masterly retreat toward the British possessions, such was his military skill and exemplary conduct, pursued as he was by various military commanders, with fresh troops, as to not only create surprise but impress the reading public with a high appreciation of his character.

There is not at this time a single Indian reservation in any Western State, or in any Territory, on which intruders may not at all times be found; while in many the "squatters" are almost as numerous as the Indians, and have such force and influence that they cannot be, or at least are not, removed. The Government has lamentably failed in making good its treaty pledges that Indians within their reservations shall be undisturbed by the intrusion of the whites. There are, in our past history, a few notable instances where the whites have been expelled, and in more recent years a few spasmodic efforts have been made rather to appease the Indians for the time being than to drive out the outlaws;

but no persistent and determined course has been adopted to compel implicit obedience to law on the part of the whites, and to fulfill, in good faith, our obligations to the Indians. In addition to the class of persons who "squat" on Indian lands for the purpose of residing and cultivating, or taking the timber from them, there is another large class who invade the reservation to rob and plunder the Indians. The effect, as may well be expected, is to make the Indians restless; to check their progress; to engender strife, often resulting in loss of life; and, in such cases, frequently troops move to the scene of disorder, not to drive off the intruders, but to punish the Indians, as though they were the aggressors, and the matter terminates finally in the expulsion of the tribe, and its removal to a new home.

Men of Tomorrow

EXTENSION OF REMARKS

OF

HON. JOSEPH J. O'BRIEN

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Thursday, July 6, 1939

ADDRESS BY J. EDGAR HOOVER, JUNE 29, 1939

Mr. O'BRIEN. Mr. Speaker, under leave granted to extend my remarks in the RECORD, I include the following address by Mr. J. Edgar Hoover, Director, Federal Bureau of Investigation, at the Boy Scout Day Celebration, Court of Peace, World's Fair, New York, June 29, 1939:

It is indeed an honor to address this representative gathering of forward-looking young Americans. You have been kind enough to ask me to discuss the subject of citizenship. Of course, this implies good citizenship—there should be no other kind. There should be no other thought for stalwart young men such as yourselves than the building of a greater Nation, a better Nation, a cleaner-thinking Nation, through the constant recruiting of new soldiers in the army of good citizenship. Only by this means may we hope to free our Nation from the threat of the criminal forces which seek to place it in bondage.

It is a cloud upon our national happiness that for each one of you young men who form the great army of the Boy Scouts of America there is a host of enemies who seek to prevent you from building our America to a higher plane of cleanliness, decency, and human welfare.

Even though you are 1,281,000 strong, the criminal hosts outnumber you almost 4 to 1. In its ranks there are over 4,750,000 murderers, thieves, burglars, embezzlers, arsonists, kidnapers, extortionists, and other offenders against our laws.

They exist through no accident. They live and breathe and plunder our country, invade our homes, wreck our happiness, and take the lives of our citizens because they, in turn, are protected by a skulking behind-the-lines crew of despoilers and modern-day pirates, the venal and corrupt politicians, who make it their business to place the profits of the underworld above the protection of the decent citizen.

These are real public enemies. They rob the good citizen of his vote on election day. They seize control of police departments and other law-enforcement agencies. And they even reach high into the governmental bodies of our States, into the legislatures, and into the courts, with their slimy hands ever outstretched to claw at the public purse.

All of us, whether we like it or not, pay tribute in some form or another to this vicious, corrupt influence which sooner or later must stifle America, unless courageous fighting young men and women enlist themselves heart and soul in a do-or-die battle for their elimination. There is your challenge.

The symbol of America, the Stars and Stripes, represents liberty and justice. "Old Glory" still waves triumphantly over the land of the free and the home of the brave. It stands for everything that is good. Americans should be prouder than ever of America today and should fight to defend her ideals from the traitors in our midst who stand for lawlessness and subversive "isms." We must turn upon the scoundrels who would destroy Americanism.

Only the young can win a war. This is your war—for a better America. Step in and win it! It is a war for decency, for the safety of our homes, for the sanctity of our ballots, and for the cleansing of the moral fabric of our fellow man.

It is your job to get recruits; every boy you teach to hate crime is a victory for your side; every person you can interest in a desire for clean politics, good government, honest administration of justice, is, indeed, worth a citation for bravery and fidelity in action. You can win this war by the building of a great fortress—a national mental attitude which will instinctively hate crime and every element which fosters it. Remember this, what you think today will guide our Nation tomorrow! There can be no greater achievement than to build for the happiness and moral safety of the future.

The forces today which make possible our great army of criminals are public apathy, public lack of interest in honest law enforcement, public laziness concerning the power of the ballot. Upon all these things the underworld breeds—and when I say the "underworld" I include in it the corrupt and venal politician. Corruption assaults the strongholds of what should be our highest and most worthy field of public effort—that of politics.

Keep it clear in your minds that good politics is a great and beneficial thing, but that corrupt politics is a criminal thing. With that thought always there should be the determination to admire, to work for, to give strength to the man or boy who looks to the field of politics as one in which to seek the betterment of his fellow man. There should be nothing but scorn and disgrace for anyone who despoils this greatest of vocations. No more important mass movement can be attempted or achieved by such a healthy-minded organization as yours than to dedicate yourselves to the task of eradicating the stains of corruption from the otherwise honored name of patriotic politics.

Perhaps there are those who will say that all these things are matters too mature for the consideration of the youthful mind. I insist that you are just the persons to know the facts. Study them and combat them, for if you are to grow up in the world as it is, you must have a chance to at least make it the world it should be by knowing the facts. This is a battle in which youth must take control, building constantly a growing army in which there shall be no quarter with the forces of darkness. Crime is your worst enemy, and the general who commands it is corrupt politics. It must be your sworn duty as men of tomorrow to do or die against this filthy crew. It is your job to clean up America.

I think of the more than a million clean-minded, stanch-hearted boys of your organization who, day by day, steadily approach closer to the threshold from which they step into what I hope is the management of this Nation's affairs. From your ranks will come executives, legislators, Governors. I have no doubt that somewhere in your vast organization, perhaps even among you who face me today, is one or more Presidents of the United States.

And I hope that in the heart of every one of you there is that spirit of contest, of ambition, of energetic zeal, and desire for the betterment of his fellow man which makes each one of you say: "I shall be that man. I shall rise to the greatest position in all the land. I shall be the President of the United States, giving my life if need be to build our America ever closer to the clean, wonderful dream of our forefathers." No young man could strive for the attainment of more that is noble and worth while and enduring.

Your achievements will be heartened by a never-ending alliance with the things that are good and noble. As we survey "the world of tomorrow," we face the changing world of today, punctuated by the traditional virtues that never change. The greatest of these is character. In your conquest of life, if you would be victorious you must dedicate your thoughts and your energies only to those activities which strengthen character. You will be a better man if you love your home and your church. Keep yourselves physically strong, mentally pure, and morally straight. Be loyal to your Boy Scout organization—it stands for the loftiest ideals and the purest things. Let nothing cause you to forget the forces which made your organization great.

Never forget the words of the Boy Scout motto—"Be Prepared." Always remain true to the Boy Scout oath, which means, in simple terms, be a good citizen, be a good man, and be a good American—first, last, and always.

Patriotic Americans Will Preserve Our Government

EXTENSION OF REMARKS

OF

HON. ANDREW C. SCHIFFLER

OF WEST VIRGINIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, July 6, 1939

ADDRESS BY HON. ANDREW C. SCHIFFLER, OF WEST VIRGINIA, JULY 4, 1939, AT GRAFTON, W. VA.

Mr. SCHIFFLER. Mr. Speaker, under leave granted to extend my remarks in the RECORD, I include the following address delivered by me at Grafton, W. Va., on July 4, 1939:

One hundred and sixty-three years ago today there came from the minds and hands of a group of representative citizens a declaration. Nothing in the political history of the world excels the exquisite excellence and attributes of that noble effort, created as with divine inspiration and marked with a recognition of the just rights of human beings in organized society. The more often we read

it the more deeply we are impressed with the real genius that inspired the creation of such a document. To appreciate its genuine value we must know and understand all previous history of the world. We must know how and under what conditions the people of the world have lived in the various parts of the world from the beginning of recorded history. Only at such time can we recognize the far-reaching doctrines established by the Declaration of Independence and the adoption of our Constitution.

Only a comparative short period of time before such Declaration was made on this continent it was the usual custom and a part of the established law of the land that human beings were considered as a part of the land and were traded, sold, and controlled as was the land itself. Human slavery, or serfdom, from the inception of human history was quite common. Color made no distinction. Undoubtedly many of the ancestors of those here today were at some time within the past few hundred years attached to and were a part of the land upon which they lived and were by their masters held as chattels and from time to time, as was the will of the master, sold or bartered, as in any other ordinary commercial transaction. Free citizenship, with the right of assembly, the right of free speech, the right of freedom in religious worship, were unknown. In effect, body and soul belonged to the freeholder of the land.

To escape this condition, then widely prevailing throughout the world, our ancestors, as opportunity came, emigrated to this fair land. Less than 300 years before this historic and outstanding Declaration came, seemingly again by Divine Providence, and as we are told almost wholly by accident came the discovery of a then unknown part of the world, a part that had until such time been uninhabited by civilized people. It is truly apparent that Divine Providence intervened to aid and inspire in the creation of our Nation. In the first instance by providing for its discovery and occupation, and, in the second instance, by inspiring the leaders to create a document for self-government that was just and fair. It requires nothing more to convince me that God revealed the way to this great land, and to the establishment of the form of government that prevails. A government wherein in the eyes of the law no individual is superior to another, where rights in all respects are equal, and wherein substantial justice is available.

Those familiar with Roman history know that only those of the highest ranks were entitled to be called citizens. It was an honor and a privilege to be attained only after special service to the emperor. Citizenship comes to Americans as a right at birth or the right of every emigrant who sees its advantages and is inspired by it and will take the oath of allegiance.

The fundamentals embraced within the system of American government are the right to select those who govern, freedom of speech, freedom of action, freedom of assembly, and the right to work, create, and to own that which we will work to acquire.

I am alarmed today and deeply anxious regarding the future and that comes from a knowledge that instead of a sovereign government, free from alliances and the influences of other nations, we are fastly becoming instead of nationals, "internationals" in our form and thoughts, and we are so weaving ourselves into a fabric of a world structure that many of these privileges and advantages are in great danger of rapidly being destroyed. It is well to bring to your attention numerous instances, but it will suffice if I recall just a few. The policy of international agreement respecting trade and barter by which we are ultimately going to lose our industrial and commercial supremacy and advantages to industry, agriculture, and labor, and commonly designated as reciprocal-trade agreements. These will lose for us much more than we can at this time actually realize. The three-nation currency stabilization agreement by which the value of the currency of the world is stabilized and fixed; the fixing of gold and silver value in London as done today by a board of managers; the dropping of the arms embargo and the effectual alliance with the so-called democracies of Europe in preparation for the expected conflict of arms; the creating of loans, and the making of gifts to many nations the world over to assist in their internal policies and the consequent agreements involved in such loans; the suggested united states of the world with the proposal of holding conventions to amalgamate the nations and place them into a confederacy or world union. These and other acts indicate a trend toward internationalism that I consider highly dangerous to our liberties and privileges, and such that will ultimately destroy the United States of America if allowed to prevail by resulting in an amalgamation of nations and international regulations that will destroy the sovereignty of our great country.

We should not urge that we demonstrate a lack of friendship for every nation in the world; neither do I mean that we should antagonize the people of other countries; but I do most emphatically declare that our primary and first duty is to preserve the sovereignty of the United States as a free and independent Nation and to fully discharge our duty to every citizen within our sovereign Nation.

It is imperative that Americans awaken to the danger of this trend and insist that such be stopped. It is essential—yes, a matter of life and death—that we awaken to what is occurring within our own country, to those acts that are destructive of its free institutions, and to those subversive influences that are continuously at work to destroy our present Government.

I am not an alarmist; neither am I a demagogue. On the contrary, I am a conservative and try to study and to understand the problems of our country and its people and to contribute to their solution with such sound and constructive thought and action as will preserve our Government, assist in the solution of our present perplexing problems, and aid in the destruction of those subversive influences.

In addition to having at this time those problems of internal Government and those questions of balancing our internal economic structure, we are met with two other outstanding propositions. The first is the effort to change our form of Government from a Republic in which men are born free and where opportunities are equal, to one in which all men are born in bondage and government is administered by dictators.

These subversive influences are at work throughout the length and breadth of our Nation. They are active in every city, town, and village in the Nation, and through a lack of understanding, many of our citizens are absorbing their philosophies. The conflict is on. Do not be deceived and disillusioned. It is not brought out in the open any more than is necessary by its shrewd managers, but ultimately, and I am afraid before very long, unless we awaken to our responsibilities and act, such influences are going to be severely felt throughout our entire land, and if continued at their present progressive rate, we may be truly alarmed as to the future preservation of our present form of government. Our liberties and advantages are vanishing; our opportunities are slowly diminishing, and surely we are becoming a divided Nation; not in the far distance shall we see the head of this creature striking here and there throughout the land to attain supremacy. It is now the time to act to stop such.

A second condition highly as important, and in a measure relates to the first, exists today. It is the tendency and inclination to become involved in world affairs to an exceedingly highly dangerous degree. The inclination to place our frontier on the Rhine or at Guam; to extend our so-called imaginary lines far into foreign lands and with fortifications immediately next door to the great far eastern empires of Japan and China. Our seemingly definitely committed policy of committing ourselves in advance and without just cause to another senseless world war.

My friends, today I recognize this highly dangerous condition. It has been debated and I have observed much during the past few months. To have talked with you and to have brought these vital facts for your attention would be futile, were I to leave without suggesting a course of action. Cleave together in union under the beautiful flag of our wonderful Nation; uphold and defend the Constitution of our country in every thought and action; practice intellectual and moral honesty, and decency in all phases of life, whether religious, political, civil, business, or professional. Be ever on guard against the loss of our fundamental privileges and contribute to the solution of our perplexing internal economic problems, and by such I am certain we shall preserve America and come out of our chaotic condition, supreme, prosperous, and contented.

The Neutrality Act

EXTENSION OF REMARKS

OF

HON. PETE JARMAN

OF ALABAMA

IN THE HOUSE OF REPRESENTATIVES

Thursday, July 6, 1939

EDITORIAL FROM THE WASHINGTON TIMES-HERALD OF JULY 6, 1939

Mr. JARMAN. Mr. Speaker, under leave to extend my remarks in the RECORD, I include therein the following editorial which appeared in the Washington Times-Herald of July 6, 1939:

[From the Washington Times-Herald of July 6, 1939]

F. D. R. NAMES NAMES

According to John O'Donnell in yesterday's paper, President Roosevelt mentioned Germany and Italy by name in discussing the Neutrality Act fight at an informal talk with newspaper people during the customary Hyde Park Fourth of July picnic.

It has been common knowledge that the administration wants the arms embargo part of the act repealed because it will make us nonneutral in fact if a European war breaks out with England on one side and Germany on the other. The present neutrality act will work for Germany and against England.

But it clears the air to have the President say as much—and then go on to explain that what he is after is prevention of war anywhere in the world by any peaceable means available in the United States.

It's hard to think calmly on this whole question. Americans are so interested in the standing European crisis and its day-by-day changes that when you say "England" or "Germany" the person you are talking to tends to stop thinking with his brain and to begin thinking with his emotions. So let's put the argument for neutrality act revision on a less emotional basis.

Suppose we should find that this law as now written (1) would work for Chile and against Peru in case those two South American nations got into a fight and (2) was a standing encouragement to Chile to start a fight with Peru. Few of us feel strongly about the fate of either Chile or Peru. Most of us would much prefer that they should not have a war, or that if they felt like having a war we should have no part of it.

Wouldn't we, in such a case, amend or repeal the neutrality act in a hurry, to insure ourselves against entanglement in a South American mixup?

Why not, then, act with the same realism about the far more probable and far more ominous European war? This law as now written will work for one side and against the other if this possible war in Europe breaks out. And it is encouraging Germany and Italy to kick over the apple cart, because their leaders are well aware of the way this law has unexpectedly turned out to be framed in their favor.

Political enemies may defeat the President on this issue in Congress, but we believe the President is on the right side of the argument nevertheless. And we believe that if the Neutrality Act is not rewritten into a genuine neutrality act there is grave likelihood that the Nation will deeply regret it sooner or later.

Probably sooner, if Danzig developments over the long July 4 week end are any indication.

Hitler didn't grab Danzig outright between Friday and Wednesday, as plenty of prophets said he probably would do.

POWER POLITICS STILL STEWING

But his husky young men in civilian clothing kept on filtering into Danzig from Germany and East Prussia, to appear on the streets a few hours after arrival garbed as German Elite Guardsmen or Danzig police. Polish barricades were reported going up on the outskirts of Danzig; England and Russia were said to be coming closer to the much discussed antiaggression pact; a French-British-Polish warning to Hitler was reported imminent.

In short, the power politics which may breed a war went right on stewing.

We can't see why Prime Minister Chamberlain should consider Danzig worth the life of a single Englishman, Scotchman, Welshman, or Irishman to the British Empire; or why Premier Daladier should think for a moment of sending one French poilu or airman or sailor out to try to keep Hitler from taking a city that is 96 percent German anyway.

Nor can we see why any American should lose a wink of sleep over Danzig. Of all the useless wars we can imagine a war over Danzig and the Polish Corridor would be among the most useless.

But a war may break out over Danzig. Europe has gone to war for less cause, hard though that may be to believe.

Do we want to have on our books a law which, by making us nonneutral in fact, can conceivably drag us into the war if it goes on long enough? We entered the World War period with solemn protestations of neutrality. We came out of it lined up with the Allies, having taken a large, bloody, and expensive part in the fight. We'd better clear off the books any law which by any remote possibility can trick us into the next European war—and we'd better clear it off now.

The Neutrality Bill

EXTENSION OF REMARKS

OF

HON. LUTHER A. JOHNSON

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES

Thursday, July 6, 1939

EDITORIALS FROM THE WASHINGTON DAILY NEWS AND THE DALLAS MORNING NEWS

Mr. LUTHER A. JOHNSON. Mr. Speaker, under leave to extend my remarks in the RECORD, I include therein the following editorial, which appeared in the Washington Daily News of July 1, 1939, together with an editorial from the Dallas Morning News of July 1, 1939:

[From the Washington Daily News of July 1, 1939]

THE NEUTRALITY BILL

We think the House made a bad mistake last night when it wrote into the administration neutrality bill a provision forbidding exports of arms and ammunition to belligerents.

We think so because that section may conceivably contribute to the starting of another European war. For it notifies Adolf Hitler that at least one branch of Congress is opposed to permitting England and France, should they be attacked, to buy guns and bullets in this country—even if they offered cash on the line and sent their own ships to do the carrying.

In our opinion the House should have accepted the original idea of the administration bill that arms exports, instead of being forbidden, should be placed on the same cash-and-carry basis that the House approved for cotton, scrap iron, petroleum, and all other shipments to belligerents.

It is argued that such a step would have been lending potential aid to England and France. But the only alternative is to strike a blow against peace by promising passive assistance to Hitler and Mussolini.

The dictators are already topheavy with planes and guns, despite the accelerated defense programs of London and Paris. Only 2 months ago Hitler boasted to his Reichstag that he had confiscated from the Czechs and "placed in safe keeping" 1,582 airplanes, 501 antiaircraft guns, 2,175 artillery pieces, 785 mine throwers, 469 tanks, 43,876 machine guns, 114,000 automatic pistols, 1,090,000 rifles, more than a billion cartridges, and more than 3,000,000 artillery shells, plus "vast quantities" of other war equipment.

So now the House has served notice that England and France need not look this way if the test comes and their defenses are found wanting.

The tragedy of it is that this assurance to Hitler, while it may encourage him to new aggression, is no real indication of what Congress would say once the drums began to beat.

A few months ago a man who certainly is no disciple of President Roosevelt said, in speaking of the European situation:

"If wholesale attack were made upon women and children by the deliberate destruction of cities from the air, then the indignation of the American people could not be restrained from action."

That was Herbert Hoover speaking, and we think he spoke the truth.

[From the Dallas (Tex.) Morning News of July 1, 1939]

NEUTRALITY DEBATE

Partisan politics is playing an unfortunate part in the drawn-out neutrality debate in Congress. Although party lines are being disregarded in many instances, the issue has become undeservedly a test of strength between administration and antiadministration forces. In addition to those Congressmen who sincerely oppose the administration neutrality bill because they fear it might entangle us in a foreign war, others are opposing it apparently because they do not like President Roosevelt and do not want to add to his influence in determining our foreign policies in the event of a European war.

Postponement of the final vote in the House may produce a more satisfactory version of the bill than the compromise tentatively accepted Thursday. This measure froze an embargo of arms and ammunition into the bill, leaving the President discretion on other exports. Members of Congress should realize that motortrucks, petroleum, steel, copper, and cotton often are as important as war materials as munitions. They need to remember also that a rigid measure that would prevent the European democracies from obtaining war commodities here might hasten their defeat and thus strengthen the aggressor powers for an attack on the Americas.

Perhaps the people of the United States are not willing to send soldiers to Europe again. But this country can hardly remain indifferent to a European war even if it should wish to do so. More harm than good likely will result if Congress tries to tie the administration's hands too far in advance of a European conflict. Our policy must be based on rapidly changing conditions abroad, and should not be tied with knots that perhaps could not be untangled until after great damage had been inflicted.

The Neutrality Bill

EXTENSION OF REMARKS

OF

HON. AARON LANE FORD

OF MISSISSIPPI

IN THE HOUSE OF REPRESENTATIVES

Thursday, July 6, 1939

EDITORIAL FROM THE WASHINGTON POST OF JULY 6, 1939

Mr. FORD of Mississippi. Mr. Speaker, under leave to extend my remarks in the RECORD, I include therein the following editorial which appeared in the Washington Post of July 6, 1939:

[From the Washington Post of July 6, 1939]

THE PRESIDENT IS RIGHT

The strong stand both President Roosevelt and Secretary Hull have taken against neutrality legislation which aids the aggressors arises out of an awareness that the United States cannot resign from the family of nations. Such realism is, unfortunately, lacking in certain congressional quarters.

The United States is the most powerful Nation on earth. Its influence is world-wide. And that influence can be of decisive importance whether we take a positive or negative stand on the great issues facing the nations of the world, whether we act or fail to act.

This is one side of the picture. There is another side. Because the United States is too big to live in a vacuum, whatever happens in the world outside our borders is bound, in greater or lesser fashion, to have a bearing on our lives and fortunes as well. We cannot, therefore, afford to be indifferent to the forces and tendencies which threaten western civilization and the peace of the world.

For that reason it is dangerous folly to assume that we have no interest in what is happening and what may happen abroad. If Europe remains at peace, if the all-too-long cycle of aggression is brought to a stop, it is not only the peaceful nations of the Old World that will be benefited by such a development. The benefit will also be ours. For with Europe at peace, our own wholehearted determination to remain at peace would then be subject to no challenge.

On the other hand, if aggressions continue and Europe is ultimately plunged into war, the chances of our staying out would ipso facto be lessened. There have been two world wars since the United States was founded. We became involved on both occasions.

Considerations of this sort make it preemptory for Congress not to lessen the influence which the United States can exert for peace. And that is precisely what would happen if Congress approves neutrality legislation that works in favor of the axis powers and against the European democracies.

The House bill is built on a fundamentally false and dangerous premise. It assumes that the United States is incapable of taking any effective measures to help insure peace. And it also assumes that it makes no difference to us whether in the struggle now going on in the Old World the axis powers or the democracies come out on top.

The Gallup poll suggests that the American people see the situation clearly. A recent sampling of public opinion by the Gallup organization revealed that, in the half year after Munich, the percentage of those questioned who favored the sale of arms to Great Britain and France in case of war increased by almost 100 percent, with two out of every three prepared to sanction such a course.

Instinctively a very large number of Americans realize that a further weakening of the European democracies would react unfavorably upon us; that a strengthening of the axis powers may ultimately imperil our peace and security. In this they show themselves infinitely wiser than some of their legislators.

Arms Embargo

EXTENSION OF REMARKS

OF

HON. LEE E. GEYER

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, July 6, 1939

ARTICLES BY DAVID LAWRENCE AND FREDERIC WILLIAM WILE

Mr. GEYER of California. Mr. Speaker, now that the House has voted by a small margin to retain the arms embargo, it is well to take stock of the effect this action has upon the country. Two columnists writing in yesterday's Washington Evening Star discussed the subject. Neither of these writers is known to have any particular New Deal leanings and both are known for their fearlessness in expressing their opinions.

One of them is David Lawrence, who uses his entire column on the subject. He writes under the caption "House Plays Into Hands of Dictators."

The other is Frederic William Wile. He gives us three short articles—Hats Off to Seven Republicans—July 1939, like July 1914—and Our Turn Next If Hitler Wins.

The articles are printed below.

[From the Washington Evening Star]

HOUSE PLAYS INTO HANDS OF DICTATORS—MANDATORY EMBARGO SEEN AS CURB ON DEMOCRACIES' SUPPLIES

(By David Lawrence)

Cables from Rome and Berlin express liking for what the House of Representatives did the other day in its so-called neutrality bill and cables from London and Paris do not.

Anybody who says America, and particularly the House of Representatives, isn't taking sides already in the world crisis just isn't realistic. That's why the administration, which has all along drawn a distinction between totalitarian states and democracies, feels deeply the rebuff which the House gave to the policy which has for the last 3 years been conducted by the Department of State under Secretary Hull—a policy of open sympathy with the democracies as against dictatorship.

In many respects Mr. Hull is one of the most outstanding men in the country, having earned the respect of Republicans as well as Democrats. His course of action throughout the European crises of the last 3 years has been one of staunch Americanism. He has not approved by any means some of the steps taken by the British and the French, but he has disapproved even more what the dictatorship states have done.

Under the circumstances, to find the House of Representatives openly taking sides with the Nazis of Germany and the Fascists of Italy in the all-important matter of neutrality is to bring clearly into view how difficult it is for the foreign policy of the United States to be conducted these days. The Constitution gives to the President and the Secretary of State the rights to make foreign policy and gives to the Congress the right to declare war. The controversy today is over the steps which might lead America into war against her will through a set of circumstances operating in the period prior to the outbreak of a world war.

HULL CONVINCED—PEACE DESIRED

Mr. Hull is convinced that the American people want peace, that they do not want a single drop of American blood spilled in aid of either side in Europe's quarrels, and that not a single soldier or sailor should be pledged to go overseas again as in 1917.

But how to keep America out of a world war, how to keep American troops and sailors from being drawn into the combat in Europe? This is the central question on which opinions differ. In fairness to the men who voted last week to prohibit the shipment of arms and munitions to European countries in wartime they think this is one way to keep America out. But in all sincerity the administration thinks this is the very way to bring on war.

The reason for these differences is that a propaganda has been widely spread that if the United States had not shipped munitions to Europe in the last war, there would have been no German submarine attacks on American ships and the United States would not have been involved. The fact is the German navy attacked every vessel whether or not it carried munitions. Ships flying the American flag and destined for neutral countries like Sweden and Denmark were blown up at sea. The German command in effect was that neutral countries give up the right to travel on the ocean. This the United States refused to do.

UNITED STATES WOULD FIX ZONES

Today the administration is willing to agree to a provision which shall keep Americans from traveling in combat zones but is not willing to surrender to any foreign government the right to say whether these zones shall be 3 miles outside of this country en route to South America or whether the zones shall be 3,000 miles away.

Of more immediate importance is the fact that America is the supply house of the world. If Germany objects to American cargoes, the objection can be raised against American wheat and corn and materials needed to supply civilian populations abroad as much as against actual war implements. The House last week by its bill barred munitions but not airplanes. This shows the embarrassments which legislators can make when they do not permit the President and Secretary of State to conduct foreign relations. For while Congress has the right to declare embargoes relative to wartime, there is no justification for writing embargoes into law now unless it is to notify one side or the other of the help they might possibly expect. To say to Germany and Italy that part of the British and French supply house will be shut off is to take sides.

To stand on the established principles of international law and to notify the world that the Congress will meet at the outbreak of a world war, giving due weight to the circumstances existing at that time, is to follow historic and traditional American policy. Any other course means misunderstandings and encouragement for one side or the other.

ANSWER READ BY ACTION

What the House has done at this time is being construed in Germany and Italy as help for them and a refusal of help to Britain and France. This tends to encourage the war-seeking elements in the dictatorship states, who are being asked to believe again, as were German militarists in 1914, that under no circumstances or provocation would the United States give any help to the Allies.

A movement to embargo arms and munitions to the Allies from the United States was started in 1914 and became one of the principal issues which divided pro-German and anti-German sentiment in the 3 years preceding the war. The belief that America was pro-German encouraged the Berlin navalists to declare unrestricted submarine warfare and had the effect of ultimately drawing America into the fray in order to protect her rights on the high seas.

To keep out of war absolute neutrality is essential, and the rules are written in the code of international law, which does not require any act of Congress whatsoever to be announced as America's foreign policy until further notice.

HATS OFF TO SEVEN REPUBLICANS

(By Frederic William Wile)

Seven House Republicans—BARTON, COLE, and WADSWORTH, of New York; MAAS of Minnesota; STEARNS, of New Hampshire; BALL, of Connecticut; and KEAN, of New Jersey—joined the 165 Democrats

who stood for outright repeal of the arms embargo. This column predicts that BRUCE BARTON, JIM WADSWORTH, MEL MAAS, and their four fellow Republicans will be honorably remembered for their patriotic, nonpartisan "Stop Hitler" votes. In thwarting the Roosevelt-Hull neutrality program, the House majority rendered the aggressor powers a service equivalent to a decisive military victory. Gloatings in Berlin and Rome banish all doubt as to the dictators' appreciation of its action. If the Nazis, despite stern warnings from Great Britain, France, and Poland, attempt to seize Danzig, history may say that resultant war was precipitated by the spiteful shortsightedness of the United States House of Representatives under the leadership of a FISH.

JULY 1939 LIKE JULY 1914

Twenty-five years ago this fateful week this observer was on newspaper duty in Berlin as joint correspondent of the London Daily Mail and the New York Times. Assassination of the Austrian Archduke had plunged Europe into precisely the same explosive tension which holds it captive today. The German war party, armed to the teeth, lusted for "the day." The one element in the situation that gave pause to the Von Tirpitzes, the Von Falkenhayns, the Hindenburgs, the Ludendorffs, the crown prince, and the other war zealots was the question, Would England come in? In their wildest flights they never dreamed the United States might eventually come in. Had they been sure either of the great English-speaking powers would some day be allied with Russia, France, Belgium, and Serbia, the Kaiser's war machine would never have cleared for action on July 31, 1914. Today Nazi Germany, unlike Hohenzollern Germany, is left in no doubt about England. After the House vote on neutrality, Hitler is left in no doubt about the United States either. He has been notified that the question of the democratic powers' ability to replenish their sinews of war in America need no longer deter Germany from risking a clash with Britain and France, who might otherwise have been invincible.

OUR TURN NEXT IF HITLER WINS

Let no American suppose that by keeping out of a totalitarian-democratic conflict, Uncle Sam is insuring himself against future embroilment in war. Is it conceivable that Hitler and Mussolini, once masters of Europe, would resist the temptation to put America in its place too? Is it reasonable to suppose that Japan would shrink from the opportunity of squaring accounts with the one power now capable of challenging "the new order in Asia?" All this, in the writer's judgment, sums up to the belief that it would be wiser and cheaper for us to help the European democracies "stop" Hitler, Mussolini, and Japan now, rather than to venture that costly task later on, single-handed and without allies.

The Inside of the Philippine Situation

EXTENSION OF REMARKS

OF

HON. JOHN G. ALEXANDER

OF MINNESOTA

IN THE HOUSE OF REPRESENTATIVES

Thursday, July 6, 1939

LETTER FROM PAGKAKAISA NG BAYAN

Mr. ALEXANDER. Mr. Speaker, 2 days after notice arrived in the Philippines of the introduction of my resolution (H. R. 198) calling for an investigation of the dangerous situation rapidly developing there, because of the Japanese infiltration and because of the type of administration being given by public officials from President Quezon at the top down through the cabinet and national assembly even into the municipal offices, the following letter was dispatched to me to be presented to the Congress of the United States.

This letter comes from one of the largest of the Filipino civic organizations and also included a resolution from the National Federation of Philippine Coconut Grove Owners with a potential membership of 6,000,000 Filipinos who own, operate, work, or are dependent on the coconut industry for their livelihood.

I call your attention particularly to paragraphs 4, 14, 16, 17, and 18, and suggest that those statements with the facts so capably related in the following letter, together with a number of other similar letters which have come to me from both sides of the Pacific, warrant the immediate attention of the proper committees of this Congress. The letter is as follows:

PAGKAKAISA NG BAYAN (POPULAR FRONT),
Manila, P. I., May 22, 1939.

Hon. JOHN G. ALEXANDER,
United States House of Representatives,
Washington, D. C.

DEAR SIR: The voiceless millions of Filipinos, who constitute the great bulk of the Philippine population, were elated by the news that you have introduced in the House of Representatives a resolution requesting congressional investigation of "pro-Japanese activities by the Government of President Quezon in the Philippines." The Japanese infiltration into the islands has reached a serious proportion that now it is not alone a Philippine but an American problem. If this question is not solved soon, and the prospects are that it will never be under the commonwealth government of the Philippines, it is feared it would only be a question of time that America's work in the Far East will be in danger of being undone by an alien power.

There is no doubt that there are public officials, and (or) wives of public officials who are involved in selling and leasing lands to Japanese. Although this question has come up several times in the past, and the names of Filipinos who acted as "dummies" exposed, nothing was done by the Quezon government. In 1936, President Quezon made a personal investigation of the Davao question. Accompanying him in his trip to Davao were scores of assemblymen. After enjoying on the way elaborate receptions in his honor, he returned to Manila and reported "there is no Davao problem."

I think your resolution should also call for the investigation of the Filipino "dummies" in Luzon. The Dingalan Bay on the east coast of Luzon, a very strategic point as a naval base, is now controlled by Japanese. A Filipino who is a big political figure in Luzon has acquired a vast forest concession in Dingalan Bay and, in turn, sublet it to Japanese. The United States naval authorities should take serious interest in the investigation of this particular case.

(4) A congressional investigation should also be made on how the big politicians in the Philippines acquired vast wealth while at the same time they have been spending lavishly, and have been living in luxury and style. These politicians, always in complete control of the Philippine Government, will in time ignite a powder keg that will bring about internal chaos and disorder, as the Filipinos are at present rapidly waking up, and are now realizing that their present economic plight has been ushered in by these politicians. Only 10 percent of the Philippines national wealth, or less, is in the hands of Filipinos, and the rest in the hands of foreigners. The Filipinos are again back to their former oppressors and exploiters—the Spaniards and the friars. And this fact would not be a credit to American administration of the islands.

Propaganda conducted by the Philippine politicos, headed by Quezon, daily pictures order, peace, and prosperity, while, in truth and in fact, the people live in misery and want. And nobody knows how long these so-called order, peace, and prosperity will last under the rule of these politicians who have been exploiting and corrupting their own people. America, which has always been interested in the general welfare of the Filipinos and the security of American residents here and their interests, as well as in the continuation of a trade relationship that would be beneficial to both the United States and the Philippines, cannot remain antagonistic to the sad fate of the Filipinos, and continue, instead, to pamper the handful of Philippine politicians.

Although he was poor in purse and obscure to fame before he became a Resident Commissioner in Washington, D. C., over 25 years ago, Manuel L. Quezon, now President of the Commonwealth of the Philippines, is a man of vast wealth and potential political power in the islands. Quezon's wealth over 10 years ago was estimated at ₱10,000,000, in round numbers, and all of it hasn't yet been disclosed to the eye of public scrutiny.

With his salary as senator the comparative meager sum of ₱1,000 per month, and with his record as a liberal spender still fresh in memory of those who have been in a position to know, the people of the islands are beginning to ask themselves what has been the source of Quezon's wealth. He couldn't have saved it out of his official salary, because the total is vastly more than his total salary could have amounted to if he saved every cent. The suspicion exists that he got it by accepting "presents" from those who profited from legislative acts that permitted them to exploit the islands and their people.

The list of Quezon's properties and the valuations is as follows:

San Felipe Neri hacienda, 2,700,000 square meters	₱5,400,000
House and lot at Pasay	100,000
House bought from Justice Johnson	75,000
Fishery in Pampanga	100,000
Lumber yard, Calawag, Tayabas	50,000
House and land bought from Mr. Gibbs	75,000
House and lot bought from Mr. Hoskins	45,000
House and land bought from Mr. Antonio Brias Roxas	12,000
Stocks in government's business enterprises and newspapers	25,000
Coconut plantations in Tayabas	20,000
Land in Balintawak	300,000
Land in Mandaluyong	4,400,000
Dalagang Bukid	100,000
Total	10,702,000

The above list does not include Quezon's land in Sariaya or Baler, Tayabas, or his interests in other countries, which up to the present time have not been estimated.

Like former Senator Sergio Osmena, now Vice President of the Commonwealth of the Philippines, who also was poor and unknown, Quezon has risen to wealth and political fame.

There is a vast difference between Quezon and Osmena, and Dr. Jose Rizal, to whom misguided admirers sometimes compare them. Rizal, when he worked for freedom, starved. He was finally sent to jail and then executed. But instead of starving, Quezon and Osmena have become millionaires, living in luxury. And although there are many people who believe they ought to be jailed for graft, the probabilities are they never will be, unless good old Uncle Sam steps in to right the wrong.

The Filipinos in general are peaceful and law-abiding people. But there is a limit to everything. Under continued abuses, patience does not hold long. And the Filipinos' patience is not an exception. This was demonstrated in 1896.

In the Philippines today, there is no such a thing as democracy. This country is ruled by a dictator, with the legislative and the judicial branches of the government in the hollow of his hands. The government here is run by one-party system, the titular head of which is the President of the Commonwealth.

(14) The President holds the purse string of the Nation, has charge of the duties of hiring and firing Government officials whether appointive or elective, controls the police force of the country, the Philippine constabulary and the Philippine Army, and, in fact, has the direct control of everything about the Government and enjoys unlimited powers, even to the point of doing and undoing things without the consent of the governed. Here there is no freedom of speech, or of the press, or of the right of the people peaceably to assemble. The political oligarchy of the President controls the election, and is aided by all Government agencies every election. The election law is so drafted that an opposition party has no chance of growth. Election frauds are rampant, and those who commit frauds are not punished. The President of the Commonwealth is surrounded by paid flatterers and admirers who from time to time praise every act and deed of the President-dictator, and who daily conduct the publicity work prescribed by the "big chief." He is also surrounded by no less than 50 advisers, Americans and Filipinos, who receive annual salaries from ₱40,000 down.

If the political order of things here is not cut from its root, the day is not far that the Filipino people will be divided against each other—the government men, most of whom are Spaniards and Mestizos, on the side of the United States, while the great bulk of the Philippine population who are not contented with the political order of things will be compelled to line up with an alien power. We do not want to see this thing take place, and to our way of thinking this can only be avoided by the early intervention of the United States by reorganizing the political institution here in such a way as to make it a real institution of democracy. For the United States to continue pampering the handful of politicians, including the Spaniards and the Friars, will not be fruitful of good results. In fact, the great majority of the Filipino people are not in favor of President Quezon's appointment of a naturalized Spaniard to become the Philippine Resident Commissioner in Washington. President Quezon's administration has always been directed in favor of Spaniards, Spanish Mestizos, Friars, and foreigners. You can therefore readily see that the Philippines has a peculiar dictatorial form of government.

(16) The news of the contemplated congressional investigation was enthusiastically received by the Filipino people, with the exception of those who are guilty of "high treason." If that investigation is carried out, along with other things which I have suggested in my letter, the Congress of the United States will really be confronted with a problem here.

(17) A copy of the resolution adopted by the National Federation of Philippine Coconut Grove Owners Organizations petitioning the President and Congress of the United States to abolish the 3-cent per pound processing tax on coconut oil is also forwarded to you for publication. Our industry here is almost dead with virtually 5,000,000 people out of work in the coconut regions. Only the Quezon government is making money, and with the excise tax refund Quezon established his political power. I believe that the coconut industry has been unjustly treated. This is the only industry that is almost in the hands of Filipinos where some 443,000,000 pesos is invested. As you well know, coconut oil does not compete in the United States insofar as its industrial usage is concerned. Instead, it helps the United States domestic oils and fats as the use of the coconut oil is not complete without using other oils or fats. Of the 6,000,000,000 pounds of oils and fats consumed in the United States for edible purposes, barely 3 percent of our coconut oil is used. Quezon, Osmena, and Elizalde, in a round-about way, are against the abolition of the excise tax as proposed in the new bill which took the place of the omnibus bill. So you can readily see these people really want to kill the "goose that lays the golden egg." I wish you would give us a hand in fighting for the cause of the coconut industry where about 6,000,000 people depend for work and livelihood.

(18) This letter has been sent to you in support of your resolution calling for a congressional investigation of the "pro-Japanese activities of the Quezon government in the Philippines." We, however, believe that your resolution should be broadened in scope so as to include congressional investigation of the political graft and corruption here, and the political set-up of the Philippines. If this is done, the Filipino people, I am sure, will be doubly appreciative of the great work America has done for them.

Yours very sincerely,

LUIS AGUDO,
Secretary, Pagkakaisa ng Bayan.

Work of the Farm Placement Service

EXTENSION OF REMARKS

OF

HON. JERRY VOORHIS

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, July 6, 1939

Mr. VOORHIS of California. Mr. Speaker, it is to be hoped that in the development of the Federal Security Agency, the work of the United States Employment Service and its farm placement service will be continued and, if possible, expanded. Particularly important to the pressing problem of migrating farm families is the work of the Farm placement service; and, indeed, no ultimate solution of that problem can reasonably be looked for until these people can have the advantage in every portion of the Nation of the guidance of some such agency in reaching employment.

FARM PLACEMENT SERVICE

The Wagner-Peyser Act, passed by Congress in June 1933, provided for the establishment of a national employment system, to operate through affiliated State employment services. The enabling statute also provided that the United States Employment Service should "maintain a farm placement service."

The United States Employment Service originated at the time of the World War, when there existed an imperative need for orderly recruiting of farm labor to harvest crops. The farm placement service has been continued as an integral part of the United States Employment Service since that time.

Prior to the passage of the Wagner-Peyser Act the Service functioned through special agents, whose duty it was to publicize shortages of labor required for various crops and to organize groups of migratory labor to cover each shortage. Farm placement work was accomplished at that time through newspapers, special bulletins, and such media of publicity, and in most instances without the advantage of public employment offices.

With the passage of the Wagner-Peyser Act, the United States Employment Service has broadened the activities and enlarged the scope of usefulness of the farm placement service. As a result of the expansion of State employment services, contact points, both for growers and farm labor, increased tremendously. In July 1935 the headquarters of the farm placement service was brought to Washington from Kansas City. Farm placement supervisors have been appointed in all of the major agricultural States west of the Mississippi and in one Eastern State. The headquarters office of the farm placement service in Washington establishes and directs its administrative policies, while the farm placement supervisors in the States focus the attention of growers and of farm labor upon the local employment offices.

Satisfying progress has been made in the program to secure orderly and controlled movement through public employment offices of the previously unregulated flow of farm labor in these agricultural States.

The farm placement service makes it its business to know crop acreages, conditions, and probable yields; the seasons and periods when additional labor will be needed; the character of the work required; the number of men that will be necessary in each instance to care for its particular needs; the wages to be paid; the living accommodations to be provided laborers; the costs of transportation; the most direct routes between points; and the sources of supply nearest to the field of activity from which labor can

be recruited. The service also is responsible for the maintenance of contacts with farm organizations. In short, its purpose is to meet the needs of both growers and workers and at the same time to avoid unnecessary and fruitless migration of labor.

When States, such as California, are confronted with a huge supply of agricultural labor and abnormal migration continues month after month, the farm placement service in Washington disseminates, through the State employment service directors, publicity designed to check labor moving toward those areas. In a further effort to discourage unnecessary migration, arrangements are also made by the farm placement service with the United States Department of Agriculture to release radio announcements concerning the number of migratory workers entering the State.

The farm placement service has set up a system of clearance with all States so as to equalize the supply and demand of farm labor, to obviate shortage of labor and the resultant spoilage of crops, and still prevent surpluses of labor which leave workers stranded at long distances from home. It is as important to keep labor in its home community when it is not needed, as it is to facilitate and regulate migration when labor is required to cultivate and harvest crops. If growers and agricultural labor become accustomed to utilizing employment offices, the flow of migratory labor can be more effectively controlled, and dislocation of workers can be more successfully prevented. The local employment office can and should be the source of information which will stop unnecessary movement of migratory labor in fruitless wanderings in search of work.

Each employment office is in position to publicize shortages of labor within the State and across State lines. Orderly movement of migratory labor is essential.

The migratory labor problem in some of the Western States—particularly in California—has become extremely acute. One of the most valuable contributions that the farm placement service has made to California agriculture is in aiding to reduce the unprecedented influx of agricultural workers from the drought-stricken areas of the United States to California in the past 2 years. These agricultural migrants went to California in the hope of rehabilitating themselves in a State where climatic and other conditions would seem to offer the hope of a less unfortunate and more pleasant existence than they had found in their States of origin.

During 1936, from all States of the United States, 97,642 people seeking manual employment were checked through the border stations maintained by the Bureau of Plant Quarantine of the California State Department of Agriculture. During 1937 this total jumped to 104,976.

In the first 3 months of 1938 a total of 29,634, or an increase of 9,233 persons over the total for the corresponding period of 1937, migrated to California in search of manual employment.

Prior to 1938 agriculturists in California had been steadily increasing their acreages in crops which required large numbers of hand laborers and were able to a certain extent to absorb these people. However, in 1938 many of these crop acreages were reduced. For example, the 1937 cotton acreage of 612,000 was reduced to 354,000 in 1938.

Early in April 1938 it became more and more evident to the farm placement service in California that if the then current rate of influx from other States continued California relief agencies would be seriously burdened with these people, a large number of whom necessarily would be unable to find employment. Therefore, with the advice and assistance of various individuals and organizations in California interested in the problem, they attempted to discourage this migration which had reached such alarming proportions.

Through the cooperation of the headquarters office of the farm placement service in Washington, D. C., directors of State employment services in Middle Western States, where the majority of these migrants originate, disseminated through their local employment offices and by means of personal contact, the press, and the radio the facts concerning agricultural employment conditions in California. In discouraging migration to California they emphasized that additional migration would work a hardship on the migrants and would jeopardize the employment opportunities of agricultural workers already in the State.

It soon became apparent that this campaign of discouragement was taking effect. From April through December 1938 the influx of migrants to California decreased 29,159 under the 1937 figure for the same period. Since that time the influx has continued to decrease. For the first 4 months of 1939 the border check stations reported that 17,623 people entered California in search of manual employment as compared with 37,096 in the corresponding period of 1938. Our united efforts in this direction have resulted in many thousands of dollars in savings to the relief agencies of California.

The farm placement service has made great strides in increasing the dissemination of employment information of interest to agricultural workers and employers alike. During the first 7 months of each year they distribute to all offices of the California State employment service and to other interested persons a monthly State-wide crop and labor report. During the active harvest months of each year they distribute this report every 2 weeks. This information is of great assistance to the 82 California State employment service offices and enables their personnel to give authentic information to all seasonal workers about potential agricultural employment opportunities, thus saving the migratory group much needless travel and disappointment in their search for employment.

In addition expressions of appreciation from other interested agencies definitely indicate the usefulness of the information thus disseminated. For example, the California State Department of Education, in the public schools it maintains for the children of migratory agricultural workers, makes available to the children the information contained in our crop and labor reports. The children, in turn, convey the information to their parents who are, therefore, currently informed as to crop activities in the State and where the most likely employment opportunities exist. Leading agriculturists in the State also have told us that they find these reports valuable aids in keeping abreast of the progress of various crops in all sections of the State.

The farm placement service has worked closely with the California State employment service in assisting agricultural employers of California to find adequate labor qualified to take care of their crops. With the cooperation of the State employment service, it has assisted in the control of the movement of seasonal, agricultural workers throughout the State, to the end that they may secure the longest period of continuous employment with a minimum of travel and inconvenience. They are working steadily toward the achievement of a so organized State employment service that agriculturally informed and interested personnel will be assigned in each office to take care of the farm labor requirements of each district; that qualified personnel will be stationed at the border checking points to disseminate factual agricultural information to persons entering the State and to direct these people to the points where they are most likely to find employment, thus preventing concentration of workers in places where there is no available employment; and that temporary roadside informational offices will be maintained during the harvest season to direct workers to points where harvests are in progress.

As a result of the efforts of the farm placement service and its supervisors in the field, there has been a steady growth of confidence in the ability of the Employment Service and its local offices to serve not only agricultural labor but the growers. Farm placements for the 11 months of the current fiscal year in the 17 States provided with Federal farm placement supervisors totaled 649,601. The farm placement service is an agency which is filling a definite and long-felt need for equalization of the supply and demand for agricultural labor and should receive greater support from growers in the future than it has in the past.

Any plan working toward a solution of the relief situation resulting from agricultural labor surpluses should take into

account the facilities of State employment services and the farm placement service of the United States Employment Service.

Benefits of the Florida Canal

EXTENSION OF REMARKS
OF
HON. JOHN M. HOUSTON
OF KANSAS
IN THE HOUSE OF REPRESENTATIVES
Tuesday, June 27, 1939

ARTICLE BY JOHN L. BOGERT

Mr. HOUSTON. Mr. Speaker, I should like to read into the RECORD an article by a great authority on shipping, Mr. John L. Bogert, editor of the Marine Journal of New York, on the benefits of the proposed Florida canal to the United States, and particularly to the great western section of our country, and to the Atlantic seaboard States. I shall read those parts of the article which are of particular interest to anyone wishing information on this subject. They are as follows:

Every once in a while some editor of our great dailies takes a shot at the Florida canal, frequently linking it with the fantastic Passamaquoddy tidal power plant. On Tuesday, April 18, the New York Times published an editorial packed with misinformation, which contained the following gem: "After the Geological Survey pointed out that underground waters would be drained over a considerable area, the fruit growers raised their voices in protest." The writer of this article was present at some of the hearings before the House Committee on Rivers and Harbors and listened to testimony by a well-known geological expert who had made a profound study of the water table of that part of Florida and reported to the committee that the canal would have no effect whatsoever on the fruit growers' lands.

The stupidity of this water-drainage criticism is evidenced by the history of our entire system of intracoastal waterways. From Cape Cod all the way down to Miami, Fla., over 1,600 miles, we have various canals that have been dug, deepened, and widened during the last 30 years. No one can point to a single instance where the digging of any one of these canals has resulted in injuring the adjacent land. And what is true as to the Atlantic intracoastal canals is likewise true of the canals in the Gulf of Mexico, reaching down to Corpus Christi, Tex.

In the opinion of the writer the strongest commercial reason for the digging of the Florida canal is generally overlooked. And he would like to prophesy that in the years that are to come our people here on the Atlantic coast will profit by it far more than they could ever dream. Through that canal will come the products of the farms of the West, away up the Missouri River. Let us take Kansas City as the great shipping point for the food raised in the West, which we in the East need daily. Suppose we take the grains, for they are the "staff of life." To bring grain from Kansas City by rail to New York costs $6.35 a ton, and the distance is 1,424 miles; this reduces to 4.45 mills per ton-mile and is a low freight rate, thoroughly unobjectionable. But water transportation is much cheaper than rail; in some cases, such as the hauling of ore on the Great Lakes, as little as one-tenth. If only we had straight water transportation from Kansas City to New York, even though it involved the use of a much longer route, we could get our food for much less money. How much saving? About one-half. If the Florida canal were in existence, barges might load at Kansas City, come down the Missouri to its junction with the Mississippi, pass down the Mississippi to New Orleans, skirt the Gulf to the entrance of the Florida Canal, pass through the canal, and finally reach Baltimore, Philadelphia, and New York (after the New Jersey canal has been dug). The total distance traversed will be about 3,000 miles, and the charge for hauling the grain will be not more than $3 per ton, half what we pay by rail now. Probably someone will protest that 1 mill per ton-mile is too low. Well, all through last year barges were hauling corn down the Mississippi from Muscatine, Iowa, to New Orleans, 1,430 miles, for 4 cents per 100 pounds.

There are 60 pounds to a bushel of wheat and 56 pounds per bushel of corn, so the cost to the farmers of Iowa was but 2.24 cents per bushel for a down-stream haul of 1,430 miles. The railroads wanted 15 cents per 100 pounds to haul the same corn to Chicago, only 574 miles from Muscatine, three and three-fourths times as much for but four-tenths the distance. This 2.24 cents per bushel for water transportation was no sporadic quotation, but the standard price at which 5,000,000 bushels of corn were transported the 1,430 miles from Muscatine to New Orleans. That reduces to fifty-six one hundredths of a mill per ton-mile. If the Mississippi River barge lines, during an entire season, hauled corn to the tune of 125,000 tons, 1,430 miles for fifty-six one hundredths of a mill per ton mile, we are justified in assuming that 1 mill per ton-mile would be a thoroughly satisfactory price if the barges could continue up the Atlantic intracoastal canals all the way to Baltimore, Philadelphia, and New York. As remarked above that would cut our breadstuff transportation bill in two.

Our food bill is the most important item in the annual budget; in the metropolitan district of New York alone the annual consumption of bread is equivalent to 1,000,000 tons of wheat. Add to that some 800,000 tons of meat, 100,000 tons of eggs, 120,000 tons of butter, and 60,000 tons of cheese and you begin to realize what a handsome saving to the eastern pocketbook $3 per ton would be on all the millions of tons of food that the West is constantly shipping us. Alone, by itself, it would most certainly justify the construction of a canal across Florida.

If we don't cut the canal across Florida the distance from Kansas City to New York will be lengthened out to 3,500 miles, and that grain will have to be transferred to ocean-going steamers at New Orleans. For no river barge would be a safe risk circumnavigating the entire Florida Peninsula. The cost for bringing us the grain would be materially higher.

What is true of grain would also be true of meat and other farm products. It is hardly necessary to stress the possibilities of the fruit and vegetable trade from Texas, but it is food, and not necessarily petroleum, that offers the greatest inducement commercially for the digging of this most important highway across the State of Florida which sticks down, like a sore thumb, for some 400 miles from the continental area of the United States. No other nation in the whole world would suffer the existence of a missing link between 1,000 miles of Gulf sheltered intracoastal waterways and 1,430 miles of Atlantic sheltered intracoastal waterways.

The Country Newspaper

EXTENSION OF REMARKS
OF
HON. JOHN W. GWYNNE
OF IOWA
IN THE HOUSE OF REPRESENTATIVES
Thursday, July 6, 1939

Mr. GWYNNE. Mr. Speaker, when the wage and hour bill passed the House, an amendment was adopted exempting from the provisions of the act "any employee employed in connection with the publication of any weekly or semiweekly newspaper with a circulation of less than 3,000, the major part of which circulation is within the county where printed and published." This was the legislative expression of the belief that country newspapers should be exempt from the operation of the wage and hour law.

It now appears, however, that Congress has not translated its intentions into proper language. It is true that most of these newspapers throughout the country have less than 3,000 circulation. There are some, however, to whom the exemption does not apply. For example, in Iowa there are 36 weeklies and semiweeklies having a circulation a little in excess of 3,000. There are also many country dailies with a circulation between three and five thousand. These latter papers work under substantially the same conditions as the weekly or semiweekly papers.

Only a very technical construction of the law would claim that these papers were engaged in interstate commerce. For example, a survey in Iowa shows that 95 percent of the circulation of these papers is in the State, and that 91 percent of their revenue comes from within the State. It should also be remembered that the circulation outside the State is largely a courtesy matter, since local advertisers are not interested in this circulation.

Furthermore, the conditions under which these papers are published make regulations not only unnecessary but undesirable. They are published in small towns where sweatshop conditions do not prevail. Wages paid are well above prevailing wages in the community for other types of employment, and are far above the minimum required under the Wage and Hour Act. In most cases employees draw a fixed weekly wage during rush times and during slack periods. They are far more secure and more comfortably situated than would be the case if they were forced to go on a strictly hourly

basis with a constantly fluctuating income. The only printers in these communities are those now employed regularly by the local papers. In rush periods, such as the weekly press day, the management cannot possibly secure additional trained help. The only solution would be to curtail the service rendered to the community. In fact, some newspapers with a circulation slightly in excess of 3,000 have found it expedient to restrict, and even cancel, some of their subscriptions to avoid the hour complication of the law.

Congress was evidently cognizant of this situation in passing the law when it expressed its desire to exempt the country newspaper. Clearly the intention was to exempt all those papers coming under this classification as distinguished from the larger metropolitan papers published under different conditions. It is hard to see why a paper with a circulation of less than 3,000 should be exempt, while its competitor with a few hundred more subscribers is under the act. The Federal Government should not adopt a policy which will encourage the publishers of these papers to keep their circulation at 3,000, thereby eventually lessening the total amount of employment and circumscribing the service rendered to the community.

In order to carry out the intention of Congress, I have introduced H. R. 6745, providing exemption from the wage-and-hour law for newspapers with a circulation of less than 5,000. The adoption of this amendment would have very little effect upon the operation of the wage and hour law, and would be of great benefit to the country newspapers and to that great portion of the reading public that they serve.

It should be borne in mind that the maintenance of the country newspapers is a matter of vital importance to the entire country. It is the most typically American institution that yet remains. Within recent years there has been a tendency to concentrate industry and population in a few large centers. To meet the problems arising from such an unhealthy and unnatural condition, we are now being told that large powers must be concentrated in Washington. I am convinced that is not the remedy and that it will only hasten the destruction of free government. The American people will some day learn that neither monopoly nor bureaucracy can exist in a free country. We need to adopt a policy that will restore prosperity and importance to the independent merchant and to the small town. When we do that, most of our troubles will be solved.

The country newspaper is the representative and the spokesman of the farmer, the independent merchant, and the small town generally. Its influence in both local and national affairs can hardly be overemphasized. Its columns are always open for announcements and regulations pertaining to the various Federal activities, such as the agricultural adjustment program. Its editorial section has never succumbed to the influence of the counting house. Nowhere is the American type of government and the individualistic form of society being more ably defended. In fairness to these country newspapers and for the good of all concerned, the provisions of H. R. 6745 should be enacted into law.

The Future of Radio Depends Upon the Use of More Power

EXTENSION OF REMARKS

OF

HON. WILLIAM H. LARRABEE

OF INDIANA

IN THE HOUSE OF REPRESENTATIVES

Thursday, July 6, 1939

Mr. LARRABEE. Mr. Speaker, I want to take just a few minutes to explain the substance of a resolution which I proposed in the House on Wednesday, June 28, providing that the Federal Communications Commission should take the necessary steps to acquire data and other factual information, and provide an adequate method for the use of power in excess of 50 kilowatts in the standard broadcasting band.

The subject of improving rural and small-town reception has been before the Communications Commission and its predecessor, the Federal Radio Commission, since the first licenses for broadcasting stations were issued by the Federal Government, and therefore I am not proposing anything new when I ask the Federal Communications Commission not to stop now but continue to investigate the possibilities of standard broadcasting with power in excess of 50 kilowatts.

Recently the Commission adopted new rules governing standard broadcasting stations and made subsequent regulations to provide increased radio service to urban listeners without taking any measures to improve service to small-town and rural listeners. These rules were adopted after exhaustive hearings which were held about a year ago, and at which time a petition was filed with the Commission by almost a score of stations scattered over the United States asking that present regulations be relaxed to permit broadcasting with power of more than 50 kilowatts. Many of these stations have had applications pending at the Commission for as long as 4 years without action of any kind having been taken on them to date.

In its report following this hearing, the Commission admitted that the evidence showed conclusively from a technical standpoint that the use of power in excess of 50 kilowatts had a distinct advantage because it provided better quality service to the vast population residing in rural areas.

The United States has a population of slightly over 122,000,000. During the day time, a population of over 16,000,000 living in about 40 percent of the area of the entire country, does not receive a satisfactory signal from a single broadcasting station. At night time, a population of over 28,000,000 living in about 60 percent of the area of the country, likewise does not receive a satisfactory signal. Then added to this is an indeterminate number of listeners who must necessarily depend on the very minimum of satisfactory signals for their radio entertainment.

By a satisfactory signal I mean the minimum signal which the Commission has arbitrarily fixed as constituting satisfactory service. Taking into consideration then, that such a vast percent of the population and such a widespread portion of the total area in the United States, by the Commission's own standards, does not receive good radio reception or anything resembling program excellence, no effort has been taken thus far by the members of the Commission to provide for higher power which admittedly is the only solution to the problem. High power will reach this area and apparently only high power is the answer to the present dilemma.

It is a strange paradox that the very people to whom radio can mean the most and to whom radio offers most are the same people who receive its benefits least satisfactorily. With city reception having been improved year in and year out for many years, has not the time come when we should consider meeting this issue squarely and fairly rather than attempting to solve the problem by ignoring it? We are certainly glad and delighted that even a low-salaried wage earner in many medium- and large-sized cities can secure the best in radio by going to the corner drug store and buying a set at $9.99, but the day will come when those of us who have been chosen to represent the people will have to explain why we have fostered rules and regulations on the part of an administrative body which forces our country and small-town people to pay $50 and $100 for receivers needlessly—when by the simple expedient of providing them, as is done in other countries, with a signal somewhat stronger, the expense is placed squarely on the shoulders of the broadcaster, where it belongs, and not on the already overburdened pocketbooks of our citizens. There are many parts of the country where even the most expensive sets cannot be substituted for an inadequate signal.

Despite the Commission's finding of fact that from a technical and economic standpoint high power is not a Franken-

stein, the Commission has arbitrarily refused to relax its regulations and permit progressive American broadcasting stations to compete with stations in Mexico, Cuba, France, Germany, England, and Soviet Russia which now operate with power not fixed at 50 kilowatts, but running even beyond 850 kilowatts. Some of these countries which use power in excess of 50 kilowatts cover less area on the map than the State of Indiana, yet the whole United States, from the Atlantic to the Pacific and from the Great Lakes to the Gulf of Mexico, is denied this type of radio reception.

That high-power stations would not create a monopoly in the air has ably been demonstrated by facts which were part of the records and have been at the Federal Communications Commission since 1922. In those years, when existing radio stations made an attempt to increase their power from 20 to 50 watts, competitor stations raised a cry of "superpower." The same cry spread when stations were generally advanced from 500 watts to 1 kilowatt. Again, when station owners prepared to increase power to 5 kilowatts, it was generally pointed out that this would create a monopoly of the air. Of course no such thing occurred, and will not occur in the event the Commission decides to permit the use of power in excess of 50 kilowatts. The term "superpower" is only relative—for example, 50 kilowatts power is less power than that delivered by a single low-priced automobile engine; 500 kilowatts power equals only that developed by one Douglas airplane engine. It will result, however, in a radio parity that will put rural areas more nearly on a par with the metropolitan districts of the country and furnish to listeners in the United States generally a program excellence that is now only attained in the huge metropolitan areas.

I am convinced in my own mind that the very phrase "superpower" as applied to broadcasting stations has created a complete misconception in the minds of many as to its meaning. If the Commission's so-called superpower report had been termed, as it might well have been, "Report on means of improving rural and small-town radio reception," an entirely different reaction to this report might have been indicated on the part of the Commission itself.

The demand for fair consideration was first voiced before the Communications Commission by the clear-channel group of stations which now operate on power limited to 50 kilowatts. The Commission licensed one station to operate on higher power for a period of more than 4 years on a basis which has since been held to be experimental. The operation of that station which likewise is a member of the clear-channel group has proved the distinct advantage of high power without affecting in any way any other station in the United States. After 4 years this station was taken off the air and its power reduced almost simultaneously with a report by the Commission that it could not grant any further experimental or commercial licenses without further facts and data.

The puzzling thing about this action is that while the Commission itself feels it is not able to cope with high power without additional data, both of a social and of an economic nature, it has refused all requests to experiment with this amount of power.

My attention was first called to this situation by a constituent in Indiana who has used the radio at 500 kilowatts power and has attained a program of excellence that has furnished a radio parity in areas that cannot be reached under service that is now provided.

I call your attention, therefore, to the program known throughout the Midwest, the South, the East, and in many sections of the Northwest as the Nation's Family Prayer Period. This program originates in the Cadle Tabernacle in the city of Indianapolis and has been on the air every day of the week for 8 years. The sponsor of this program, Rev. E. Howard Cadle, through his family prayer period has penetrated into the rural and small-town areas of the North and into the mountains of the South with a response that has never been attained before by any program of this nature. Dr. Cadle has equipped with radio 400 formerly abandoned churches in six States. Each Sunday some-odd 40,000 underprivileged people by walking, by horse, or by mules congregate at these churches to hear the word of God by radio.

Plans have been formulated for opening up more than 6,000 abandoned churches, which will be equipped with radio and rededicated in North Carolina, South Carolina, Virginia, Tennessee, Kentucky, and West Virginia. More than one-half million people will hear the Gospel from this interdenominational institution. However, this plan now will have to be abandoned because of the inadequacy of radio signals in this area.

One of the first to realize the benefits that were provided by this type of broadcasting, Reverend Cadle, in a clear and convincing letter to the Federal Communications Commission, pointed out that the decision denying additional power was probably predicated by a desire on the part of the Commission to serve the best interest of radio stations and was reached, no doubt, only after carefully weighing of the facts presented.

While not questioning the sincerity of the Commission, Dr. Cadle showed how this reduction in power had deprived many thousands of good citizens not only of fine radio entertainment, but even more important, deprived them of the efforts of his organization and similarly situated groups to bring the word of God through the air.

Many of Dr. Cadle's listeners in recent weeks have protested to the Commission in more strenuous terms this action in reducing the amount of power to be used in broadcasting. Despite these thousands of protests, the Commission has steadfastly refused to reconsider its action, and being impressed with this demand, I introduced the resolution with the hope that the Commission would see fit to make a further study before arbitrarily writing a closing chapter in the field of radio.

I admit that I have a further hope that this resolution will provide better radio service for Indiana, which now suffers by a maladjustment as a result of earlier allocations made by previous Commissions. I might illustrate, by way of example, that Indiana today has relatively no large broadcasting station, while to the north the city of Chicago alone has five, and to the east and south four other stations operate on clear channels and with 50 kilowatts power. Under the present system of allocation of licenses for radio facilities, there is little hope that Indiana within the near future will have any powerful stations.

I have reason to believe that serious consideration is being given to a possible application on the part of a station in Montana for clear-channel operation, while at the same time the Commission has taken no steps to improve radio service in the great State of Indiana, which is now limited to one station operating on 10 kilowatts and sharing its frequency with other stations over the United States.

Two stations in Indianapolis are permitted to operate on only 5 kilowatts power during the daytime, and then are required to cut down to 1 kilowatt for nighttime service. One other station in Indianapolis is licensed on even less power. While I am unfamiliar with situations and conditions in other States, I have reason to believe that similar conditions prevail, and that my resolution would open the door to providing a means for an examination and an investigation of methods of providing increased service and facilities.

Since Indiana has so little hope, under existing conditions, of securing a high-powered station, it appears that our only chance for better radio service is through the possible licensing of high power, and it is, therefore, my desire that the Commission make a further study of this question. I believe that many of those employed by the Commission are in complete agreement with me that high power should be approved.

I wish to further point out that my resolution does not propose an appropriation of any additional funds. It simply calls on the Communications Commission to further study the question of superpower and instructs the Commission that it is the will of Congress that the Commission shall make such study.

America has always been the leader in progressive development and usage of modern inventions. I am unwilling that America shall lag behind foreign nations who are already far in the lead in the use of high power.

If any of us are inclined to treat this subject of radio reception lightly, let me impress upon you that it is not a subject which has been dealt with lightly by our people. The American people have invested over $4,000,000,000 in radio receivers, and any steps which might be taken to improve the utility and the use of an investment of this magnitude will represent an appreciable contribution to American life.

I believe that we in Congress have a clear conception of the advantages that certain foreign nations have obtained from their explorations into and use of the field of superpower in radio, and I think you will agree with me that it is of utmost importance that our Nation be in a position to at least enter into friendly exchange of radio programs.

We cannot hope to progress further if we refuse to explore the questions that confront our efforts toward progress.

I am hopeful that this Congress will support me in my desire that we instruct the Communications Commission to reopen and further investigate this question, which is of paramount importance.

The resolution is appended herewith:

Whereas the Federal Communications Commission in its report on proposed rules governing standard broadcast stations and standards of good engineering practice has made new rules and regulations to provide increased radio service to urban listeners without taking any measures to improve service to small towns and rural listeners leaving the implication that no solution of this problem is being sought; and

Whereas the report of the Federal Communications Commission lists in detail the many possible advantages of high-power operation in the standard broadcast band, particularly to people living in small towns and rural areas; and

Whereas the new rules governing American international shortwave stations prohibit the use of power less than 50 kilowatts in order to provide better service to foreign listeners while conversely other rules governing stations serving our own people within the continental limits of the United States are prohibited from using power in excess of 50 kilowatts; and

Whereas the Federal Communications Commission in its report has reached the conclusion that because of the inadequacy of data on the social and economic aspects of high-power operation in the standard broadcast band (550 to 1,600 kilocycles) no provision should be made to permit the operation of standard broadcast stations with power in excess of 50 kilowatts: Therefore be it

Resolved, That it is the sense of the House of Representatives of the Congress of the United States of America that the Federal Communications Commission should take such steps as may be necessary to provide an adequate method to obtain data and other factual information and material necessary to determine the social and economic effects of power in excess of 50 kilowatts and that in so doing the Federal Communications Commission shall not be restrained from licensing one or more than one station or stations to operate on power of more than 50 kilowatts for such experimental operation as may be thus necessary.

Neutrality

EXTENSION OF REMARKS

OF

HON. CLAUDE V. PARSONS

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Thursday, July 6, 1939

EDITORIAL FROM THE WASHINGTON EVENING STAR OF JULY 5, 1939

Mr. PARSONS. Mr. Speaker, under leave to extend my remarks in the RECORD, I include therein the following editorial which appeared in the Washington Evening Star of July 5, 1939:

[From the Washington Evening Star of July 5, 1939]

ENCOURAGING AGGRESSION

Neutrality action that has the effect of lending encouragement to aggressor nations is fraught with danger to all the world—and what is dangerous to the world is dangerous to America, however isolated we may strive to keep ourselves from other nations. President Roosevelt, with this fact in mind, has significantly called attention to the gratification with which Nazi Germany and Fascist Italy have received news of the unexpected action of the House of Representatives in butchering Secretary Hull's sensible program for promoting peace. The eyes of the dictators were on the House when it slashed from the administration-favored Bloom bill the all-important section calling for repeal of the arms embargo provision of existing law and substituted for it a modified but still dangerous embargo plan. That the scene was one pleasant for war makers to contemplate is evidenced by the jubilant tone of the Nazi and Fascist press. Mr. Roosevelt says that reports received at the State Department confirm the fact that the action of the House in proposing a wartime embargo on guns, shells, and powder was welcomed by the dictator nations of Europe.

The President, at a press conference yesterday, quite properly deplored the mutilation of the Hull peace program by the House and insisted on adoption by this Congress of some sort of legislation having the objectives of that program—prevention of a world war and, failing that, the safeguarding of the United States from entanglement in such a conflict. He made it plain to the correspondents that he believes, with Secretary Hull and many other authorities, that the first step toward discouraging international troublemakers should be the scrapping of the present embargo law, application of which would adversely affect psychologically, if not from a material standpoint, the democracies of Europe, while causing little or no material inconvenience to the well-armed aggressor nations. That is why the Nazis and the Fascists smiled—probably unbelievably—when the House, purportedly representing the temper of the whole American people, tacked an embargo section on the Bloom bill. Now that the reactions of Germany and Italy to the House move have been observed, it behooves that body and the Senate to ponder carefully the full import of Nazi and Fascist glee.

Railroads on Parade—World's Fair Pageant of Transport History

EXTENSION OF REMARKS

OF

HON. EMANUEL CELLER

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Thursday, July 6, 1939

Mr. CELLER. Mr. Speaker, critics have hailed Railroads on Parade, feature attraction of the railroads' exhibit, as an outstanding event of the entire world's fair. "A great show," says John Anderson in the Journal and American. "A spectacle that packs the 'it' of Rosita and her dove dance, the thrills of the ski jumper at Sun Valley, and the educational values of Merrie England's Globe Theater," according to Robert Coleman in the Mirror. Variety calls it the "Barnum of industrial exhibits." The Sun says, "Most amazing show on the lot"; and Brooks Atkinson, "More fascinating than a girl show."

Railroads on Parade is a real stage presentation in story, music, and spectacle of America's conquest of a wilderness told in terms of transport. It is presented on a great outdoor stage or series of stages, 250 feet wide by 140 feet deep, which provides two standard-gage railway tracks for the "parade" of old-timers under their own power, with coaches, and for the modern locomotives that climax the show; broad highways for vehicular traffic, a performing stage for actors, chorus, and ballet, and a channel in rear for the review of early watercraft in life-size replicas.

Old-timers that "parade" include the British-built Stourbridge Lion, sent here in 1829, and the first locomotive to run on American soil; Best Friend of Charleston, first locomotive built in America; Tom Thumb, DeWitt Clinton, Atlantic, Galloway, Ross Winans, Thatcher Perkins, Pride of the Prairies, Genoa, and others.

In 16 scenes and in actual settings and costumes of the periods, actors, horses, locomotives, covered wagons, stagecoaches, oxen, and mules reenact the part transportation has played in the opening up of the American Continent. The performance flows to Kurt Weill's music from a 30-piece orchestra, with soloists and chorus, all located in a sound room. Sound effects specially devised for the performance

carry every note and word to every corner of the 4,000-capacity amphitheater. Isaac Van Grove is conductor.

The story begins at the New York water front, 1829, with ceremonies attending the opening of the Erie Canal. Then to Honesdale, Pa., scene of the Stourbridge Lion's debut. To Baltimore next, with the little Tom Thumb, 1829, come to replace its horse-drawn railway; followed by other old-timers, all "in person" and under their own power. An interlude follows, with Lincoln on his way to his inauguration, his prophecy of a transcontinental line and the scene of its fulfillment—the famous golden spike scene at Promontory Point. There are scenes to show early railroad travel in contrast with the comfort and luxury of modern travel. A bridal party scene in the seventies in a gay dance number and interludes of ballet. There are freight-train scenes and dramatic scenes depicting everyday railroad life.

Two giant locomotives that roll on from each wing for the finale provide a thrilling climax to the show.

Edward Hungerford is creator and producer; Charles Alan, pageant director. Harry Horner designed the costumes and stage sets.

Thomas Jefferson Renounces Third Term

EXTENSION OF REMARKS

OF

HON. DANIEL A. REED

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Thursday, July 6, 1939

EDITORIAL BY RALEIGH T. GREEN

Mr. REED of New York. Mr. Speaker, under permission to extend my remarks in the RECORD, I include an editorial by Mr. Raleigh T. Green, editor of the Culpeper (Va.) Exponent, for the information of my colleagues on both sides of the aisle and for the country generally:

[From the Culpeper (Va.) Exponent]

PRO BONO—SOME OBSERVATIONS

A trial balloon? That is the question that occurs to this writer when we note that four members of President Roosevelt's Cabinet have within the past week or so issued unequivocal declarations of their conviction that it is to the best interests of the country that Franklin D. Roosevelt be elected to a third term in the Presidency.

These four Cabinet members are Harold L. Ickes, of the Interior Department; Harry L. Hopkins, of the Commerce Department; Frances L. Perkins, the woman Secretary of Labor; and Attorney General Frank Murphy. Stephen T. Early, Mr. Roosevelt's most confidential private secretary, in a recent magazine article, touches upon the subject by declaring that in the 1940 Presidential campaign Mr. Roosevelt would again be prey to the whispering propaganda aimed at him in 1932 and 1936.

In the meantime the President maintains an unbroken silence upon the all-absorbing topic. No one, in spite of numerous efforts, has as yet been able to draw from him any semblance of a concrete statement as to his feelings and intentions.

A counterpart to this sphinxlike silence upon the part of Mr. Roosevelt is to be found in the early political records of our country.

Thomas Jefferson, the third President, was, undoubtedly, in the infant days of our Republic, opposed to a third term in the Presidency. He wrote numerous letters to that effect. From Paris, before he returned to become the first Secretary of State, under George Washington, his letters to various correspondents carried expressions of strong advocacy of a constitutional inhibition against a third term. Today the antithird term people point to Jefferson's position as a complete confirmation of their attitude of opposition to a third term.

Yet, delving back through the pages of history, we find Jefferson at the beginning of the 1808 Presidential campaign, when approaching the close of his second term in the Presidency, was persistently silent upon the subject, in spite of the fact that it was being widely discussed and acted upon by those who were favorable to a third term for Jefferson.

In November 1806 the Legislature of Vermont, with Jefferson's term not expiring until March 4, 1809, by formal resolution, called on Mr. Jefferson to be a candidate for a third term. In December 1806 the Legislature of Georgia joined in the request, to be followed in January 1807 by Maryland. Rhode Island joined the procession in February, followed by New York and Pennsylvania in March and New Jersey in December 1807. North Carolina joined later. Virginia was conspicuous by her absence.

The above States, advocating a third term, possessed an electoral vote of 86—just 3 short of the 89 necessary to elect.

The Republican States—Jefferson was the leader of the Republican Party—of Virginia, South Carolina, Ohio, Kentucky, and Tennessee, with 50 electoral votes, held aloof, as did, naturally, the Federalist States of New Hampshire, Massachusetts, Connecticut, Delaware, and Maryland, with 40 electoral votes.

It is probable that Jefferson was embarrassed and perturbed by the conflicting Presidential aspirations of his two proteges—James Madison and James Monroe. These two, in their rivalry for Presidential honors, almost became openly antagonistic. James Madison was elected, serving for 8 years. He was succeeded by James Monroe, who likewise enjoyed two terms.

Thus it was that the "Virginia Trinity"—Jefferson, Madison, and Monroe—filled the Presidential office for 24 consecutive years.

This situation confronted Mr. Jefferson when, on December 10, 1807, he replied to the invitations of the third termers as follows:

"That I should lay down my charge at a proper period is as much a duty as to have borne it faithfully. If some termination to the services of the Chief Magistrate be not fixed by the Constitution, or supplied by practice, his office, nominally for years, will in fact become for life; and history shows how easily that degenerates into an inheritance. Believing that a representative government responsible at short periods of election is that which produces the greatest sum of happiness to mankind, I feel it a duty to do no act which shall essentially impair that principle; and I should unwillingly be the first person who, disregarding the sound precedent set by an illustrious predecessor, should furnish the first example of prolongation beyond the second term of office."

Hence, we see the manner in which Thomas Jefferson punctured his trial balloon, as his enemies declared it to be.

Mr. Jefferson, in the above letter, speaks of the "sound precedent set by an illustrious predecessor (Washington)."

While on the subject of George Washington's ideas about a third term in the Presidency, let us put upon the witness stand an illustrious American, John Adams, of Massachusetts, who succeeded Washington in the Presidency after having served under him as Vice President for 8 years.

Adams, in July 1813, writing to Thomas Jefferson, said:

"Your administration will be quoted by philosophers as a model of profound wisdom; by politicians as weak, superficial, and short-sighted. Mine, like Pope's woman, will have no character at all." (Adams served only one term, being defeated by Thomas Jefferson in 1800.)

"The impious idolatry of Washington destroyed all character. His legacy of ministers was not the worst of the tragedy; though by his own express confession to me, and by Pickering's confession to the world, in his letter to Sullivan, two of them, at least, were fastened upon him by necessity, because he could get no other. The truth is, Hamilton's influence over him was so well known that no man fit for the office of State or War would accept either. He was driven to the necessity of appointing such as would accept.

"This necessity was, in my opinion, the real cause of his retirement from office; for you may depend upon it, that retirement was not voluntary."

The wonder is that someone of the bright brain trusters of the New Deal aggregation have not before this availed themselves of John Adams' testimony as to the alleged real feelings and desire of George Washington.

What will President Roosevelt do to the trial balloon sent up by his cabineteers?

Will he puncture it, as did Thomas Jefferson the balloon of 1806–7? Will he be motivated to such action by the knowledge that his great, great grandfather, Isaac Roosevelt, voted in favor of constitutional prohibition against a third term while he was a member of the New York Constitutional Convention, which ratified the Federal Constitution of 1787?

We shall see.

Defense of Freedom

REMARKS

OF

HON. RALPH E. CHURCH

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Thursday, July 6, 1939

Mr. CHURCH. Mr. Speaker, under unanimous consent to revise and extend my remarks in the RECORD, I include a speech delivered by Col. Robert McCormick, publisher of the Chicago Tribune, at the Fourth of July celebration of the Du Page County Centennial Association in Maple Grove Forest Preserve, west of Downers Grove, Ill.

Colonel McCormick is a nationally recognized champion and defender of the liberty and freedom of America. His

speech, entitled "Defense of Freedom," constitutes an appeal for the defense of true Americanism and is as follows:

DEFENSE OF FREEDOM

As we celebrate the one hundredth year of Du Page County and the one hundred and sixty-third anniversary of the Declaration of Independence, let us remember that our forebears came to this continent refugees, escaping religious persecution and political oppression; that they were followed by swarms of officers and standing armies; were taxed without their consent—denied in many cases the benefit of trial by jury—and punished by prejudiced officials in tribunals unknown to their common law.

Eventually they rose in revolt, drove out the royal governors, organized an army, and ejected the redcoats from Boston.

It was while awaiting a new invasion that delegates from the several colonies met at Philadelphia and resolved that the colonies had become free and independent States.

ACTION TAKEN NONE TOO SOON

This bold and concerted action was taken none too soon. The American Army was defeated on Long Island, destroyed at Fort Washington, and its remnants driven across New Jersey. They were rallied by the heroic Washington on Christmas Day to the victories of Trenton and Princeton, and found refuge on the impregnable heights of Morristown.

Further catastrophes followed. Arnold was driven from Quebec, Washington was defeated at Brandywine and Germantown but afterward the Continental Army was forged to steel in the horrors of Valley Forge.

Now the tide of battle changed. Burgoyne was defeated by Morgan and Arnold at Saratoga, and surrendered to General Gates under terms that blackened the latter's character forever. Clinton was forced to retreat from Philadelphia to New York, escaping destruction only through the treason of Gen. Charles Lee.

Defeated in the field, the enemy resorted to treachery. Arnold, the hero of Saratoga, was tempted to betray the key position of our armies at West Point. Fortunately, fortune betrayed the betrayers. Arnold fled for his life, but the tempter, André, was caught and hanged.

TRAITORS USE PATRIOTIC CLOAK

It is well to remember that this betrayal was represented by its perpetrators as an act of patriotism to reunite the Colonies with the homeland; to repeat on this continent the action of General Monk in calling back King Charles II to replace the Commonwealth of England.

While the conspiracy of André and Arnold failed miserably, the idea has never entirely died. The true interests of this Republic have been subordinated time and time again to those of the kingdom from which it separated itself by the Revolutionary War.

In the year 1845 the Ashburton treaty was, in the terms of its father, "floated through the United States Senate on a sea of champagne."

At a more recent date the Hay-Pauncefote treaty sought to divest this country of sovereignty over the Panama Canal, but this time the Senate would not accept the betrayal.

The open-door policy in China and all of the other treaties concerning that side of the world are mere instruments to reduce this country to military and diplomatic vassalage.

IN MIDST OF NEW CONSPIRACY

I was a witness to the conspiracy which would have placed the American Army in France under foreign command, so that this country would have no standing at the Peace Conference. The Army resisted this usurpation, but the national interests were totally ignored at Versailles and the stage was set for another European war.

And now we are in the middle of a conspiracy to throw this country into that war, and the conspirators are in partnership with a conspiracy far greater and far more dangerous to our national welfare—the conspiracy to scrap the Constitution of the United States and supplant it with the terrorism and communism of Russia.

After our forefathers had consummated the Declaration of Independence by the capture of Cornwallis' army at Yorktown, they established the Constitution, so well described by Lincoln 64 years ago today, as the "Government of the people, by the people, for the people," and by the statesman, William Gladstone, as "the most wonderful work ever struck off at a given time by the brain and purpose of man."

So perfect was this instrument that it was accepted as a model by all of the States—first the Original Thirteen States and in turn the other 35, the last being the State of Arizona in 1912.

FORTY-NINE CONSTITUTIONS DIFFER LITTLE

These 49 constitutions are practically identical, differing only in minor matters and in detail. While the laws of our States vary widely [the States which were originally French or Spanish retaining much of their old law], the fundamental rights of citizens are found in the constitutions of all of them.

It was for more than a hundred years the inspiration of all the world. In its image representative institutions were set up almost everywhere, and the rights of men for the first time rose above the rights and idiosyncracies of rulers.

So clearly right did our form of government appear, so general was its acceptance, that the teachings of its great founders, of Patrick Henry, George Mason, Samuel Adams, and Thomas Jefferson, fell into disuse as newer generations sought to explore the sciences and bring them, as well as the free continent, to the service of mankind.

FAIL TO TEACH NEWCOMERS

Nor were these teachings taught to the citizens of Europe who were freely invited to our shores, under the belief that they would recognize the excellence of our institutions and join with us in their perpetuation. This hope has been realized for the greater part, but not in entirety. There have been those who, after leaving the poverty and oppression by the aristocracy in their old homes, have looked upon the earlier settlers who had achieved prosperity, as a new world aristocracy.

Some of these newcomers became victims of the preachings of Karl Marx and his philosophy—as baneful as that of Belial—and were led to such crimes of violence, as the bombing of the Haymarket in Chicago in 1886 and the bombing of the Preparedness Parade in San Francisco in 1916. Shocking as were these crimes, they were, in size, mere police matters.

It was not until the ignorant people of Russia had been led to their revolution and massacres, that organized attempts began to overthrow the Government of the United States.

COMMUNISM THREATENS NATION

Communism was making all Europe a battleground. In Italy and in Germany it was only resisted by the dangerous inoculation of fascism—whereby representative institutions and the rights of individuals have been destroyed—a condition terrible to our thought; but compare it with communism, where, in addition to loss of liberty, millions have been massacred and other millions exiled to starvation and freezing in the Siberian Arctic; millions massacred—including every doctor, every lawyer, every engineer, every farmer who owned a horse or a cow.

It is communism. That is the conspiracy which we have today, working with the other conspiracy to engage us in European wars, so that our Constitution may be overthrown, our liberties destroyed, and our people enslaved and massacred.

Communism made its first attempt to overthrow our Republic in 1919.

"REDS" CALL CHICAGOLAND STRIKE

In accordance with its well-laid plan, the Russian general staff called a strike in the steel mills south of Chicago, calculating that it could use the ensuing disorders to block the railroad network passing by the southern end of Lake Michigan, disrupt the transportation system of the country, force factories to close, throw workers out of employment, and cause misery and riots which could be turned into a revolution.

This first effort was so firmly and tactfully suppressed by Gen. Leonard Wood, with whose staff I was serving at the time, as to cause little alarm. Other crimes committed in connection with this disorder again did not exceed police scope, nor cause general apprehension.

The conspiracy went underground again. Little is known of its progress for 15 years, but it is history that the La Follettes made their pilgrimage to Moscow in 1923, met the leaders of the Russian terrorism, and learned from them the technique of revolution.

Ten years later Maxim Litvinoff came to this country, held secret meetings with political leaders and in the White House, and obtained diplomatic recognition of his bloodthirsty government.

SECOND OUTBREAKS IN WISCONSIN

The second revolutionary outbreaks were staged in Wisconsin, where the soil had been carefully prepared; where the Russian propaganda of envy, hatred, and malice had become the language of the self-styled Progressives. Mobs were supported by the authorities; witnesses to political murders in an adjoining State were given asylum and saved from extradition; industries were shut down and driven from the State, and the revolutionists exulted, as the disruption of industry, under the pretense of labor controversies, was their plan.

Two years later, when the governorships of several States, embracing the command of the military, had fallen into the hands of traitors, the long-maturing plans to overthrow our Republic were put into Nation-wide effect.

The methods which had worked so successfully in Russia, and which had led to fascism in Italy and Germany, were called forth in a series of undeclared civil wars.

BESIEGE FACTORIES AND CITIES

Organized bands of Communists declared strikes in factories where they worked, or where they did not work, closed them, blockaded them, occupied them, throwing the law-abiding and industrious workmen out of employment. Trained armies of Communists marched across State lines, occupied and besieged whole cities, and were frequently supported by the armed forces of the traitor Governors.

The United States mails were placed at the disposal of the private armies and withheld from American citizens.

It is one of the greatest phenomena of history that the American people, unorganized against a thoroughly organized and determined foe, betrayed by their own Governors and their own Government, remained steadfast, resisted the revolution, and successfully defeated their betrayers in the election of 1938.

It is because of this defeat that the Communists are now conspiring to put us into a European war, so that war powers may accomplish what the police powers are not strong enough to do.

CELEBRATE PARTIAL VICTORY

So, here we are, meeting on the Fourth of July, celebrating the anniversary of the Declaration of Independence, celebrating the anniversary of Lincoln's Gettysburg speech, celebrating the one-hundredth anniversary of Du Page County, and celebrating our partial success in resisting the communistic civil war.

As I look out among you, do I not see refugees? Have not many of you come to live in these suburban towns to avoid political conditions you have not been able to overcome? Have you not come to put your children in schools you can control? To take your children away from associations which contaminate, that you might go to work without fear that criminals will prey upon your women and children while you are away, that they will be beyond the fury of mobs infuriated by rabid speech and led by trained revolutionists? You know you have.

Does it occur to you that you are living in a fool's paradise? That the Communists are craftily leaving you in your peaceful semipastoral lives, while they forge a political and criminal machine strong enough to destroy you?

SALVATION LIES IN RESISTANCE

And have you been suffered to depart in peace? You have not. Escaped gangsters from St. Charles already roam this countryside and terrorize our people. Professional criminals thrust gambling machines into our midst, protected in a nearby county by a corrupt judge. Violence and assassination have begun to show their heads. Swarms of officers are ordering what we shall grow and what we shall not grow on our farms. Tribunals unknown to our common law threaten us with prison without trial by jury.

My friends, you can no more escape from criminality, from oppression, from tyranny than could your forebears. It will follow you and force war upon you. Your only salvation lies in effective resistance. Let us begin that resistance today by reiterating the Declaration of Independence. Let us dedicate ourselves again to our Constitution. Let us organize for defense of our freedom and our firesides, or we will fail where all of our predecessors have succeeded—and the government of the people, by the people, for the people will perish from this earth.

United States and International Problems

EXTENSION OF REMARKS

OF

HON. LISTER HILL

OF ALABAMA

IN THE SENATE OF THE UNITED STATES

Friday, July 7 (legislative day of Thursday, July 6), 1939

ADDRESS BY HON. LEWIS B. SCHWELLENBACH, OF WASHINGTON

Mr. HILL. Mr. President, last evening the Senator from Washington [Mr. SCHWELLENBACH] delivered a very able and challenging address before the Institute of Public Affairs at the University of Virginia. I ask unanimous consent to insert the address in the RECORD.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

The history of a quarter of a century ago is repeating itself. In fact, the conditions in this early July are more ominous than were those of early July 1914. Then the dangers were fairly well localized; today they spread over the face of the entire world. For the first time in its history England has adopted a policy of peacetime conscription. The British Navy is being mobilized. The French behind their Maginot line and the Germans behind their Siegfried line are tensely waiting for the first blow to be struck. Poland has a million men under arms preparing for conflict. The Mediterranean and the Baltic are alive with rival navies. A final dress rehearsal for war is under way.

This week in the Far East marks the second anniversary of the undeclared war of that area. The lack of the declaration of war has not subtracted from the fierceness of the conflict, nor the inhumanness of the conquerors. The Japanese war lords, seemingly not satisfied with aggression against China, want at the same time to stir up controversy with England and Russia.

Even our own continent is not free from war. It is true it is not a war of arms. It is a war of trade and ideologies. The republics to the south of us are being bombarded in a most persistent effort to tie them in with the powers of central Europe. Lacking monetary reserves, Germany and Italy strenuously attempt to deprive us of our trade advantages in South America through the reversion to the old barter system.

Since July 1914, we have learned certain lessons—first, we learned of the almost insurmountable difficulty confronting this Nation in its efforts to stay out of and remain aloof from world conflict; second, we learned of some of the mechanisms which in 1915 and 1916 added to and augmented that difficulty; and, third, we learned of the futility of our active participation in European conflict.

We need only to go back to the days prior to our entrance into the war to understand the vividness and importance of the first lesson. We all remember President Wilson's original warning that our people should be neutral not only in action but in thought. There may be differences of opinion concerning Wilson's course of conduct at that time. Fair-minded people do not differ concerning the sincerity of his desire to avoid a course which would lead us into war. The events which culminated in the declaration of war offered almost conclusive proof of the impossibility of maintaining true neutrality under such circumstances.

Our Government was outraged and our people annoyed by the Allies' refusal to obey established rules of international law in their treatment of our merchant vessels. For a time, at least, there was every indication that we might be forced to cast our lot against those nations with which we were later allied.

Then the submarine attacks of the Central Powers not only outraged our Government but shocked our whole people. With increases in the brazenness and effectiveness of the submarine campaign, American popular opinion not only came to support but to demand our participation against Germany and her allies.

In considering our course of action today, that lesson must not and will not be overlooked; this because it will be so much more difficult for us to avoid participation now than it was then. There are many reasons why this is true. First, the United States since 1914 has so developed into a producer of surpluses that the maintenance of foreign trade is much more important than it was in 1914. The prosperity of so many more millions of our people depends upon foreign trade than it did in 1914.

Second, the Axis Powers are so much more dependent upon the importation of raw materials than were the Central Powers in 1914. This will lead them to a policy of desperation much more quickly than it did the last time. Undoubtedly scientific advancements during the last two decades have added to the efficiency and effectiveness of the more frightful instrumentalities of war. Undoubtedly they will be resorted to much sooner than they were before because of this very desperateness.

Third, our own facilities for transmitting information to our whole people have so greatly developed the last 25 years. Our news-gathering agencies have made much progress. The instantaneous transmission of news photos from any part of the world and the advent of the radio make inevitable the development of public opinion with a speed which was not dreamed of during the last war. I had this brought to my attention most strikingly last summer. I was in Europe during July and August. I arrived in Washington the day of the meeting at Munich. The striking contrast between the knowledge that our people had and the interest they had as compared with the people in Europe is impossible to describe. Any taxicab driver in the National Capital knew more about what was going on in Europe than any citizen in England, France, Germany, or Italy, outside of those who were actually connected with the foreign offices of the various governments. I said then that we were closer to the war which didn't happen in September 1938 than they were to the last war as late as December 1916. Frankly, I doubted my personal survey of the situation until I read in the papers a statement made by Cardinal George Mundelein, who returned from Europe a few weeks after I had, who made the statement when he got to Chicago that it seemed good to get back to the United States, where people knew what was going on in Europe.

The importance of this phase of the question cannot be overlooked without totally deceiving ourselves. The Constitution gives to the President almost exclusive control of our international relationships. The Constitution gives to the Congress the exclusive power to declare war. Our history proves that no President and no Congress has ever led the American people into war. To a greater extent than in any other field, American popular opinion makes the final decision as between war and peace.

The second reason is concerned with the mechanisms which led us down the path of the last war. It was the recognition of the importance of these mechanisms which brought about the adoption of our present so-called neutrality legislation. I use the term "so-called neutrality legislation" in no sense of disparagement toward it. It would be difficult for me to disparage the legislation, because I voted for it three times. Nevertheless, I believe it has been unfortunate that it has been called neutrality legislation; unfortunate for two reasons—first, long-developed international law has given certain meanings to the word "neutrality." Under international law neutrals had certain rights, certain duties, and certain privileges. There is and has been no effort to maintain that sort of relationship under our legislation of the past 4 years. Second, the word "neutrality" in itself implies an effort to try to treat both belligerents precisely the same. Our present legislation does not contemplate such an attitude. No matter what might be done concerning the arms embargo or cash and carry, or any provision of the present act or proposed revisions of it, we could not treat both sides in precisely the same way. The basis of the legislation is that expansion of our munitions industry, the granting of private loans to belligerents, the shipments of supplies—both munitions and other supplies—the sailing of merchant vessels to war zones, the arming of merchant vessels, the policy of protection of our nationals while sailing in war zones are all the mechanisms which dragged us into the last war. The policy of the so-called neutrality legislation is to prevent their repetition, regardless of which side might be hurt or which side might be helped.

The third lesson which we learned the last time was the futility of our efforts so far as settlement of European problems are concerned. On this point I believe there is little difference of opinion.

Probably we expected too much. I am not one who supports the theory that we were actuated by selfish motives nor led by self-aggrandizing leadership. I think that almost unanimously the American people believed they could and would effect such a solution of European problems as would bring permanent peace there. What happened at Versailles, what happened to and in the League of Nations, and what has happened in Europe since are largely beside the point. They did happen and now, 25 years later, the nations of Europe are at each other's throats the same as they have been dozens of times during the course of European history. What we did in Europe in 1917 and 1918 probably didn't delay the next European war by a single day. In fact, there are many people who believe that had we not participated, the last war would have resulted in a stalemate and a more lasting peace than the one which was written. That, too, is a debatable question, the debating of which is hardly worth while.

If our investment in a new European war could be a smaller one, we might be justified in sitting in on the game. We now know, however, that for us to take part in such a game requires the putting up of our entire roll. To buy our chips we would have to pay with the lives of our young men and with the broken minds and bodies of thousands who might return, staggering increases in our debt, and with economic maladjustment which probably would ultimately destroy not only our economic system but also our democratic form of government. Faced with those certainties and those probabilities, the American people must determine that regardless of the provocations and regardless of the consequences, we will, under no circumstances, participate if war comes to Europe. The winning of a victory in such a war would in itself result in our own destruction. Men learned long ago that such victories were not justified.

It seems to me that today the American people do have and should have two hopes—first, that a world-wide war conflagration shall be prevented; second, that if one comes, we shall be out of it. In the consideration of our present-day foreign policies, our first problem arises in an effort to reconcile the two. In other words, our problem is to determine how far can we go in preventing the world war without involving ourselves to such an extent that we cannot escape participation if one comes? It is around this question that all the present controversy rages.

I have no sympathy with anyone on either side of this question who characterizes or even suspects those with whom he disagrees of being desirous of involving us in a European war. I have utter disgust for those on either side who, during this troublesome time, attempt to so characterize those with whom they disagree. I have personal and intimate contact with both the executive and legislative branches of our Government and I am convinced that there is no such intention on the part of anyone. That includes those upon the one side who believe we should name and denounce the aggressors and lend open aid to those who oppose them. At the other end of the scale, it includes those who are strict isolationists and who believe that we should refuse to recognize that we are a part of the world at all and that we should fold up in our shells and let the rest of the world go by. That applies not only to those within the Government but to those interested persons outside the Government.

For a period of several weeks the Senate Committee on Foreign Relations heard witnesses who presented the problem from every point of view. Certainly, we had exhibited to us the widest divergence of opinion; and yet it was my considered belief at the conclusion of the hearings that each witness, no matter what may have been his objective or viewpoint, was actuated only by an unselfish desire for the maintenance of peace.

I do not propose in this discussion to present a detailed argument concerning the many controversial issues involved in the present neutrality controversy. You probably will have full opportunity to read them in the press within the next few weeks. The important thing to understand is that the conflict of opinion comes exclusively over differences of opinion as to how far we can go in trying to prevent a war without entangling ourselves if we should fail in those efforts.

Translated into terms of the proposed legislation, the President and Secretary of State believe that the removal of the embargo upon arms, ammunition, and the implements of war, and the placing of them in the same classification under a cash-and-carry system as oil, steel, and other products useful for the prosecution of war, would deter the axis powers and prevent the outbreak of war. Those who oppose this policy see in the lifting of the arms embargo such a danger in the development of our munitions industry in the event war should occur that they are unwilling that we should take this measure of prevention.

At this point, I want to point out one aspect of the situation which has not been generally considered. That is, the possibility of congressional deadlock which would defeat any legislation. These sections of the Neutrality Act which have to do with cash and carry lapsed on the first of May. I sincerely hope that those opposed to the lifting of the arms embargo will not create a situation which will prevent the reenactment of those sections of the act which would give us the protection afforded by the cash-and-carry system.

I hope I have made it clear by this time that I don't feel there is any royal road which we may take to avoid our becoming involved in a world-wide conflict. There are too many doors which will lead us to it. We have become and are too much a part of the world to ever again wholly isolate ourselves. The fact is that, in some form or another, we have participated in every European war since the beginning of our history. The obstacles along the road to isolation are much more pronounced than they even have been in the past. I see positive danger in placing too much reliance on any mechanical method for staying out of war. We must not lull ourselves into a sense of security through any legislative panacea as a protection against war. We can take advantage of lessons of the past in an attempt to construct barriers against our participation. We can and must guard against the danger rocks upon which we floundered in the past. We can and must convince the other nations of the world that our preparation is such that they won't dare to flaunt us brazenly as they have in the past. We can and must so perfect our so-called neutrality legislation as to avoid the specific dangers which were instrumental in our entrance into the last war. What we cannot do and must not do is to place such reliance upon such legislation as to cause us to be careless in our thoughts and actions.

Frankly, it is sometimes pathetic to read the letters that come to our offices indicating the blind faith that many of our people have in certain legislative guaranties of peace and safety. A couple of months ago I discussed this subject over a Nation-wide radio broadcast. The next week saw hundreds of letters coming into my office from every part of the country. In each the writer agreed with my thesis of the necessity of staying out of a European war. In almost every instance the writer had some definite, specific proposal which in his or her opinion would guarantee the attainment of that objective.

I know that probably from the business point of view it would be desirable to have all the American people content in the sense of security that we were protected against war. Temporarily, we might be happy if we felt sure that we wouldn't get into war. The inevitable result of such a sense of false security would lead to carelessness in our attitude toward all other aspects of our international problems from which inescapable dangers would be created.

There is another aspect of this problem which we must discuss. It involves the situation in the Far East. It has direct bearing upon the first aspect of our problem. One need only to review the events of the past 2 years to reach this conclusion. Certainly the events of the last 2 weeks have cinched the conclusion. No person with his eyes open can escape believing that there is a direct relationship between the situation in China and the situation on the continent of Europe. It may be that the Rome-Berlin axis has not been extended in military form to Tokyo; no well-informed person will deny that the Tokyo end of the alliance does directly cooperate with Rome and Berlin.

It is no coincidence that every time Mr. Hitler has decided to seize more territory in Europe the attention of those who might oppose him has been distracted by annoyances from Japan. What other explanation can be given to the Tientsin incidents of the past few weeks and of the outbreaks between Japan and Russia upon the Mongolian border? Japan certainly doesn't today desire to add to its opposition. Japan's armies and its resources are fully occupied by the Chinese controversy. Yet, deliberately, it chooses, from time to time, to provoke unnecessary conflicts with England, France, and Russia. Such conflicts uniformly come simultaneously with threats of further acquisition of territory by Germany and Italy. No more decisive steps could be taken by a nation desiring to prevent war in Europe than those which would prevent Japan from rendering indirect assistance toward furthering of a war in Europe.

Yet we, more than any other nation in the world, are directly assisting in the continuation of Japan's activities in China. Were it not for the assistance of the United States, Japan's Chinese campaign would probably have collapsed many months ago. Japan is a nation without the necessary materials of war. The whole purpose of her Chinese conquest is to acquire territory from which she may secure resources for further extension of war. We speak of her as having Germany and Italy as her allies. The fact is that we are her most important ally. Japan has no oil with which to operate her airplanes, her tanks, her trucks, her automobiles, or even her battleships. We furnish 65.57 percent of that which she secures from the outside world. She must have scrap iron and steel with which to manufacture her munitions. We furnish 30.39 percent of that. She must have copper for her munitions. We furnish 90.98 percent of that. She must have other metals and alloys, and we furnish 99.33 percent of those. She must have metal-working machinery. Our contribution is 67.9 percent of that. We furnish 64.67 percent of the automobiles and parts which she is using in China. We furnish 76.92 percent of the aircraft and parts with which she bombs the hospitals, schools, and missions in which the Chinese people seek shelter. There never has been in the history of the world—civilized or uncivilized—a more ruthless and frightful campaign of conquest than that which Japan has been waging in China during the last 2 years.

We have been told that the next war will be a war against populations and not between armies. If this is true, Japan is certainly furnishing a hideous sample of what we may expect. The murder of the old and young noncombatants, the destruction of schools and places of worship, the humiliation and ravishment of China's womanhood all paint for us a picture of lustful aggression gone rampant. The experts tell us that Japan has in adequate quantity only 2 of the 26 materials necessary to carry on modern warfare. Of the most important of the other 24, I have given you the figures as to the extent of our participation. If the writers of history in the future actually know how warfare was conducted in 1939 through the use of necessary materials, they will write down a description of China's conquest not by the Japanese but by a

Japanese-American alliance, the Japs taking the conquered land and the Americans taking the profits from the sale of our raw materials.

We criticize the Japanese for not making an open declaration of war on China. Perhaps we should pause and wonder whether we are more than slightly less guilty.

To make this situation even more humiliating, it is in direct violation of treaty obligations upon our part toward China. We criticize Germany and Italy for their attitude toward treaties. We criticize England and France for their attitude toward Ethiopia and Czechoslovakia. In the proposals before the Congress that we should name the aggressor nation, the distinction which we are urged to accept is upon the basis of treaty violations. Yet we are just as effectively violating a treaty as any of these nations ever have. It is true we send no enlisted American troops. We send only the materials for use by Japanese troops. We provide no drivers of trucks or tanks or pilots for airplanes. We just furnish the gasoline which propels these trucks and tanks and airplanes. We don't even take the chances that the Japanese take. All we do is to take the profits that we can make.

What treaty are we violating? In 1921, in an endeavor to reduce naval expenditures among the great powers, the Washington Conference was called. It had the leadership of the then very able Secretary of State and now revered Chief Justice, Mr. Charles Evans Hughes. Its chief purpose, in the beginning, was the limitation of naval armaments. The most important accomplishment of the conference, however, was the adoption and signing of the Nine Power Pact. The purpose of this Nine Power Pact is stated in the treaty as follows:

"To adopt a policy designed to stabilize conditions in the Far East, to safeguard the rights and interests of China, and to promote intercourse between China and the other powers upon the basis of equality of opportunity."

This was not the first contact our Nation had had with China. For 125 years we have been sending over missionaries, to open schools, colleges, hospitals, and churches. It might be said that that would create no obligation upon our part. So far as the Chinese were concerned, it did create an obligation. The trust which the Chinese people had in American missionaries, doctors, nurses, and teachers was transferred to the American people and the American Nation as a whole. In 1899, we intervened in China and insisted upon the open-door policy. We insisted that our rights in China be recognized and that no other nation could create a sphere of influence there. After the Boxer Rebellion in 1900, we again bound China to us by refusing our indemnities.

Such was the feeling of the Chinese people toward our country that in 1911, when the new government was set up, ours was taken as the example and model. We encouraged such an attitude upon the part of the Chinese people. During the World War, when the rest of the world was busily engaged, Japan made an effort, through her 21 demands, to destroy the territorial integrity of China. In that she was blocked by Woodrow Wilson. In return for this China readily complied with President Wilson's request and declared war upon the Central Powers shortly after we entered the world conflict. When that war ended, however, China profited not at all. The net result, so far as China was concerned, was that her old rival and enemy, Japan, was given all of the German rights in China, in addition to many other rights in Shantung, which was China's sacred Province. In retaliation of that and with disappointment with the way she had been treated by her allies, the Chinese people commenced their effective blockade against Japanese goods. It was an effective blockade. Its success struck vitally at the economic structure of Japan. It must be remembered that then Japan did not have her diversified foreign trade; her merchant marine had not been built to the strength that it now occupies. To Japan, Chinese trade was of vital importance. By the time of the Washington Conference on Armistice Day, 1921, the Chinese blockade had reached a state of well-nigh perfection. In that conference we asked Japan to agree to a naval program which meant economy for us and also lessened the danger to us in the Pacific. In consideration of Japan's agreement in the naval side of the conference we induced China to discontinue the blockade. In payment for this action on China's part, we wrote into article I of the Nine Power Pact the agreement "to respect the sovereignty, the independence, and the territorial and administrative integrity of China."

All nine of the nations agreed to it. So solemn was the declaration on our part that President Coolidge proclaimed:

"To the end that the same and every article and clause thereof may be observed and fulfilled with good faith by the United States and the citizens thereof."

China, relying entirely upon her trust in us, surrendered her most effective weapon. China believed her sovereignty and independence, administrative and territorial integrity would be respected by the nations of the world. Did she not have the strong arm of her American friend to uphold her? Yet today China suffers and her independence and her territorial and administrative integrity are being destroyed. We, for the filthy profits involved, are aiding, abetting, and cooperating in that destruction.

What right have we to point the finger of scorn at Germany, Italy, France, or England when they regard treaties as scraps of paper? Contemporary historians of these days are striking a saddened note describing this era as one of treaty breakers. Can anyone doubt that our oil and our copper and our scrap steel and iron are the most effective agents in this violation of a treaty that this era has yet seen?

So far as China and Japan are concerned, it isn't a matter of us getting into the war. We already are in the war. We are in the war in violation of a treaty which we signed in order to gain an advantage which we sought. The background of our relations with China should make that treaty the most sacred of any ever written.

The courts of equity place upon the individual who has gained the respect and confidence of another individual a much higher duty for the faithful performance of an agreement than upon one who is dealt with at arm's length. The same rule should apply to nations. So far as we are concerned, it should have particular application in regard to China.

We in Congress are in the midst of vigorous debate over what we should do in event war comes to Europe. We have no treaty obligations in Europe. We do have most definite and sacred treaty obligations in Asia. Yet we almost completely neglect consideration of them even though respect for them would probably materially lessen the chance of the European war we so much fear. In my opinion, every consideration of logic, justice, and responsibility requires that our first step should be to get out of the present war in which we are so effectively participating.

May I conclude with just one more thought: It appears that the next few years will be filled with danger. They should not be years during which any patriotic American will attempt to secure political or personal advantage by arousing prejudices, hatreds, and resentments among our own people. It will be a time for calm discussion. It will not be a time for recrimination. There is a wide divergence of opinion among our people as to the proper course of action which we should take. It is my belief that there is no difference of opinion on the question of the sincerity of the desire for peace. I don't believe we have any war mongers either in or out of public life. We must have full and complete discussion. That discussion should be calm and dispassionate. Tolerance of the opinion of other Americans must be observed if we are to hope for peace.

The President and Politics

EXTENSION OF REMARKS

OF

HON. JOSEPH F. GUFFEY

OF PENNSYLVANIA

IN THE SENATE OF THE UNITED STATES

Friday, July 7 (legislative day of Thursday, July 6), 1939

RADIO ADDRESS BY JAY FRANKLIN

Mr. GUFFEY. Mr. President, I ask unanimous consent to have inserted in the Appendix of the CONGRESSIONAL RECORD a radio address delivered by Jay Franklin on July 5, 1939, being a discussion of the President and Politics.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

In discussing the President and politics, I take it that you do not want me to twist the facts or suppress my honest beliefs in order to serve any partisan interest. So I shall follow Mr. Sullivan's example, and keep this discussion on a calm, noncontroversial level.

Mr. Sullivan has advanced an amusing theory. He says that Mr. Roosevelt could persuade the Republican opposition and the Tory Democrats to muster the patriotism to give the Executive the powers needed to protect our currency and promote our neutrality, if only he first stripped himself of all real political influence by foreswearing a third term. This is an interesting idea. I know of no case in history where the opposition voluntarily increased the power of an Executive after he had abandoned his own followers and surrendered the powers of his own political position. I do not believe that politicians who hesitate to serve their country because they wish to weaken the people's President, would rush forward to strengthen President Roosevelt the moment he cut his own political throat. I can just hear the Tory chorus—with Mark Sullivan's voice leading the gloomy song—"Ah! but does he really mean it?" if the President took Mr. Sullivan's advice and announced that he did not choose to run in 1940, when it is clear that he must run or plunge the Nation on the road to ruin.

Yet Mr. Sullivan's suggestion raises the very issue which Mr. Sullivan most deplores. When we first agreed on the subject of tonight's debate I had hoped to discuss the position of the Presidential office in our public life. That Mr. Sullivan has—quite properly—chosen to discuss this broad subject purely in terms of the third term for Roosevelt shows the great and growing vitality of the third-term movement. It is the irrepressible issue of our times and makes for a livelier discussion than the subject of whether Mr. Sullivan could have planted potatoes in 1934. I bet he would have blamed Roosevelt for the potato bugs in any case.

Many of you heard Senator GUFFEY, of Pennsylvania, speak over this network the night before last, calling for a third term for

Roosevelt in one of the most significant utterances in our recent political history. Mr. GUFFEY is not only a liberal and a lifelong Democrat, but he is also a very practical politician with a reputation for guessing right. When his voice is added to Senator George Norris, of Nebraska, Secretary Ickes, Senator Murray, of Montana, and other leading New Deal Democrats, it means that the political tide has started to sweep Mr. Roosevelt toward reelection. For JOE GUFFEY was the man who foresaw the election of Woodrow Wilson as early as November 1910. He was the man who picked Franklin D. Roosevelt to win in February 1931, a year and a half before the New Deal election of 1932. When it comes to foreseeing the political future, I like to know what the practical politicians think is going to happen.

Now let's get back to the debate and leave the third term aside for the moment.

The Presidency of the United States is the only office which is filled by the vote of all the people. The President—whoever he may be—represents all the people and must consider their interests on a national basis. Even the best of Senators and Congressmen are engaged in promoting State or local interests, where they are not frankly engaged in the private business of getting Government jobs, contracts, and favors for their friends, their financial backers, and their loyal constituents. Did we not see the venerable figure of Senator BORAH, of Idaho, vote for a tremendous increase in the price of silver, when the Coeur d'Alene district of Idaho is rich in silver mines? Do we not behold Senators and Representatives from the rural regions who have voted to starve the city unemployed in the name of economy, turning around and appropriating nearly half a billion extra dollars of deficit for the benefit of farmers. Mind you, I am not condemning this—it is human nature—and I happen to feel that relief for the farmer and for the jobless industrial worker go hand in hand. To raise the domestic price of silver a few cents an ounce does not appear to me to be morally wrong or economically dangerous.

But the fact remains that the President is the only man who gets his mandate from all of the people, the only man who represents more than a congressional district, a State, or a political machine. As a result, the powers of the Presidency have grown considerably since the time of George Washington to match the growing needs of the Nation and the people's sense of national unity. Particularly since the closing of the frontier in the 1890's and the growth of gigantic trusts and monopolies narrowed the opportunities of the average man. * * * Particularly since the rise of industrial unemployment and of a group of bankers and manufacturers who honestly believe that they are—their businesses are—above the Constitution and immune from the election returns. * * * Particularly since then have the American people staked more and more on the creation of a powerful Presidential office which could protect their interests and promote the general welfare.

It is no accident that three of the six most powerful Presidents of our history have held office since 1900. In Theodore Roosevelt, Woodrow Wilson, and Franklin D. Roosevelt we have men who compare with Jefferson, Jackson, and Lincoln. This is no accident. The Presidency has grown in power, and the men who fill it have been forced to grow in moral stature and in political imagination or go under.

Now the so-called conservatives—the party of those who are always losing their wind, begging destiny for a breathing spell, and waiting for the twentieth century to blow over—the conservatives seek to meet the need for a powerful Presidency by denying it. Like the yokel who first saw a camel, they cry, "There ain't no such animule!" when they are confronted by a powerful President in there fighting for the people. They cry havoc at his policies and deny the existence of the crisis which they are creating in one and the same breath. All that the so-called conservatives have ever done is to pack the Supreme Court with Justices trained to declare the twentieth century unconstitutional and to try to repeal the American people. What they have done is to give us a Taft or a Harding, a Coolidge or a Hoover, some variant of the three wise monkeys of Asia, who see nothing, hear nothing, say nothing, do nothing, and, where possible, know nothing. While they have this "bump on a log" in the White House the power collapses, the stealing begins, the unsolved problems pile up, and, bingo, we have to rise in our wrath and turn the rascals out.

There is no sense in appealing to the Constitution, written or unwritten, as to whether Congress, rather than the President, should direct our national policies. Political power always goes to those who can use it. I have no quarrel with a Congress which seizes power from any President, if that Congress is itself prepared to use the power. I did not like to see the Senate manhandle Woodrow Wilson and smash the world's hope of a peaceful recovery from the Great War. But at least that Senate of 20 years ago knew what it wanted, and, having blasted Wilson's foreign policy, was prepared to put forward another policy of its own. Their program happened to be a bad one, as it turned out, and led to the crash of 1929, the Hoover depression, and the rise of the totalitarians in Europe and Asia; but at least the men who beat Wilson knew what they were doing and were eager to assume power for themselves.

Up to midnight on June 30, there was reason to believe that Congress might evolve a policy of its own. Then the Congress demonstrated its incapacity to use the powers which the so-called conservatives begrudged the people's President. Mr. Sullivan has mentioned money and neutrality as great issues which have been bedeviled by partisanship. And he is right. But while Mr. Sullivan did tell you that this Congress has allowed many of the protective features of the neutrality laws to lapse, he did not tell you that now, when we face a serious crisis in Europe, Congress has adjourned its patriotism in order to wrangle and bicker over the precise form of neutrality law it would like, to the delight of Hitler and Mussolini. Congress has been tuning up its fiddles at the moment when the world is waiting for the fire alarm. Congress had 6 months to act and did nothing. That does not look like a body to which we can safely entrust real power in times like these.

Then there is the monetary question. The plain, ugly, brutal fact is that a filibuster of Republicans and certain Democrats was deliberately engineered at the last moment, in order to prevent the passage of a monetary law, in the hope of throwing our financial foreign policies into confusion and weakness. Only this afternoon, 5 days after the dead line, the Senate adopted the money bill by a close vote. On this, too, Congress had had 6 months to act and did nothing till after the twelfth hour. That is not the conduct of a body to which we can safely entrust real power in times like these.

Then there is the relief bill. Mr. Sullivan probably does not agree with me that relief is vitally important. I was taught to believe that the first duty of man to his neighbor is to feed the hungry, clothe the naked, and help the poor and the weak. History tells me that no government and no social order which deliberately starves its members can stand. By a slick congressional squeeze play the relief bill was held up till late on June 30, when it had to be passed without consideration or debate, in order to help the Tories smash the Federal theater and subject a million American families to possible starvation. I do not propose to discuss the present relief problem. I simply wish to point out that the whole thing was a dirty piece of political jobbery designed to kick men who were down, in order to weaken their faith in their President. One thing more, Congress is responsible for the government of the District of Columbia, where we suffer from taxation without representation. Yet this Congress let the fiscal year come to an end without passing the District budget or discharging its plain constitutional duty. On this, as on other more important issues, congressional government has collapsed. Congress had 6 months to act and did nothing. This is not the conduct of a body to which we can safely entrust power in times like these.

That leaves only the Presidency. And Roosevelt is our President. He cannot avoid the responsibility even if he would. He is our man, the representative of all the people, and only by running again can he keep faith with us and with our hopes. In an earlier broadcast on this issue, Mr. Sullivan made fun of the idea that President Roosevelt represents our hopes, our fears, and our interests. He said that that sort of Roosevelt was only a dream, and he asked, "Have you ever seen a dream walking?" Does Mr. Sullivan doubt the power of dreams to move mankind? Does he not know that dreams are what men live by and die for? Does he seriously believe that society consists entirely of pay rolls, meal tickets, and car loadings, when he himself advocates "obedience to the unenforceable"? I recommend that he reread the Book which tells us that "man liveth not by bread alone."

Assemblage of the African Methodist Episcopal Church

EXTENSION OF REMARKS

OF

HON. JOHN G. TOWNSEND, JR.

OF DELAWARE

IN THE SENATE OF THE UNITED STATES

Friday, July 7 (legislative day of Thursday, July 6), 1939

ADDRESS BY HON. ROBERT A. TAFT, OF OHIO, JUNE 22, 1939

Mr. TOWNSEND. Mr. President, I ask leave to have inserted in the RECORD the text of an address delivered on June 22, 1939, by the distinguished Senator from Ohio [Mr. TAFT] before the Bishops' Connectional Councils and the Congress of Young People of the African Methodist Episcopal Church at Convention Hall, Philadelphia, Pa.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

Bishops of the African Methodist Episcopal Church and members of that great church, I am greatly honored to be invited to address this gathering, containing as it does so many of the leaders to whom the colored people of America look for guidance and progress.

It is of great significance in the history of the country that this assembly meets in the city of Philadelphia, where, 152 years ago, there were two remarkable gatherings. One of these was the Convention which created the Constitution of the United States, the now famous Constitutional Convention of 1787. The other was a less well known gathering but of equal significance on such an occasion as we now celebrate. It was the first meeting of the

Free African Society, out of which came the African Methodist Episcopal Church. It was in this period, when the Declaration of Independence had declared that all men are created equal, and its principles had been established on the bloody field of war, that there arose your distinguished founder, Richard Allen, willing to demand his manhood rights in American life and to organize for their attainment. The Boston Massacre of 1770, in which Crispus Attucks, a colored citizen, who was among the first to shed his blood for American liberty, had been celebrated prior to these assemblies. Three thousand Negroes had fought in the American Armies of the Revolution for our freedom. The sentiments aroused by these events had their influence not only upon the entire American people but also upon our colored citizens. This was especially the case here in Philadelphia, where the colored people began to assert themselves in independent movements.

It was in February 1786 that your distinguished leader, Richard Allen, whose monumental work is still perpetuated in this city, came to Philadelphia. He entered upon the work of organizing our colored citizens in religious and social activities. He was their leader, teacher, and preacher. In November 1787 there occurred the famous event, well known to all of you, which led Richard Allen and Absalom Jones to leave St. George's Methodist Episcopal Church, and to organize the Free African Society, finally established on April 12, 1787. It was the first step of the Negro people in the United States toward an organized social life, and the first evidence which history affords of economic and social cooperation among the colored people of the western world. The first meetings of the society were held at the house of Richard Allen. From this period until 1794 the society continued its existence, but all during this period Richard Allen was planning for a large organization. Allen's determination was consummated when he purchased a lot at Sixth and Lombard Streets, and on July 29, 1794, a building was dedicated on this site by Bishop Asbury, famous itinerant leader of the Methodist Episcopal Church. This very building is in existence today, with a flourishing congregation, and is known as the Bethel African Methodist Episcopal Church.

Just as the Constitution was the first incorporation of the liberties of all the American people in printed form, so the incorporation of Bethel African Methodist Episcopal Church on September 12, 1796, was the first incorporation of your own desire for religious freedom under the flag of our great Republic. It is also of interest to observe that the men and women who formed these two organizations, the Free African Society and the African Methodist Episcopal Church were American citizens. Some of them had been slaves, but they had freed themselves by their own efforts, or had been freed by benevolent masters. They were property owners, citizens, and voters in these early days of the Republic. The efforts of these first leaders, therefore, extended not only to religion, but to the broader interests of the colored people of America. It was not strange that the founders of your organization should have extended their efforts in this early period to the organization of schools, to a benevolent society for the caring of the sick and the burying of the dead, and to participation as citizens in our American life. It is a privilege for me to be present at this great event which brings you back to Philadelphia to gather inspiration at the tomb of your founder, whose body lies buried in the Bethel African Methodist Church, but whose spirit marches on throughout the world in the work of the great church which he founded.

It is a pleasure also to congratulate the Bishops' Council of the African Methodist Episcopal Church upon their assembly on this occasion. I understand that your bishops have assembled in gatherings of this type continuously down through the years. Bishop Morris Brown, your second bishop, had associated with Bishop Richard Allen, your first bishop, in the holding of conferences. Bishops Morris Brown, Quinn, and Waters had also associated in this work without any provision for separate districts. In 1852, for the first time, your bishops assembled in a formal council, and divided their church into districts. The first district, embracing the Philadelphia and New York conferences, was assigned to Bishop Daniel A. Payne, the founder of Wilberforce University, which is so well known and held in estimation by me in my home State of Ohio. The second district, embracing the Baltimore and New York conferences, was placed under Bishop Willis Nazery; and the third district, embracing the Indiana and Ohio conferences, was placed under Bishop William Paul Quinn. Thus the church was organized in this early period by the bishops in council. I congratulate you that you have thus kept faith through the years to this present moment, and that your great church has shown a constant development under the leadership of such distinguished men as have characterized the bishops of your church.

It is, indeed, appropriate that you should meet here today to honor and revere this heritage of your past. From the small body organized in 1787 as the society, and during the administration of George Washington as the African Methodist Episcopal Church, through the general conference of 1816, held in this city, when Richard Allen was elected your first bishop, your church has grown with leaps and bounds. It was first confined in 1816 to parts of Pennsylvania, New Jersey, Delaware, and Maryland. It spread into New York, Ohio, Massachusetts, and the Republic of Haiti during the next 20 years. By 1856, when the Republican Party placed Abraham Lincoln in nomination for the Presidency of the United States, it had established itself in Illinois, Indiana, Missouri, Louisiana, Kentucky, and the lower parts of Canada.

Since its ministers were not permitted to establish churches legally in the slave States, it was compelled to confine itself in large measure to the Northern States. But when freedom came your church turned its attention to the South, and churches were organized in 1866 in South Carolina, Georgia, Florida, Tennessee, Texas, and Alabama. By 1896 the African Methodist Episcopal Church had entered every Southern State, and its missions were established in Liberia, Bermuda, and South America. Twenty years later its missions were planted in Jamaica, South Africa, and Nova Scotia. Schools and colleges were founded in nearly every State, beginning with Wilberforce University. A newspaper was established, the Christian Recorder, in 1852, and is today the oldest continuous periodical in the United States. The last United States religious census shows that there were 6,708 of your churches, 7,000 ministers, and 545,814 members. This membership, I am told, has steadily increased during the past decade, so that its members are far beyond those which have been reported by the United States census of religious bodies. While the African Methodist Episcopal Church has more than 10 percent of the total number of Negroes in its membership, actually its influence is many times this percentage, because the ministers and religious workers are among the leaders, the molders of opinion, and the active citizens in their individual communities as well as in the Nation.

The progress of the colored race since Abraham Lincoln issued the Emancipation Proclamation in 1863 is due in large part to the leadership of these ministers and religious workers, inspired by the example of the founders of the church. That progress is unique in the history of the world, for in 76 years your race has risen from slavery to a position of influence in every profession and walk of life. You have developed leaders not only in the religious field but in the professions, in law, in medicine, in science, and in education. If progress has been less evident in the field of business, it has been largely due to an economic discrimination which has been difficult to overcome, although the general opinion is that the colored people have not availed themselves as they might of the opportunity to establish stores and other business organizations to provide the needs of their own people.

The significant thing about this progress is that it has been made through the work of your own leaders. There has been help from many well-intentioned white people, and that help has undoubtedly been of value. But without the ability and foresight and leadership of your own people, that help would have been of no avail.

We see a good deal of Government help today, typically in the hand-outs of relief and W. P. A. from the Federal Government. Such help may be necessary, but it is likewise demoralizing. It is vitally essential that you escape from it as soon as possible, and that the Government lay a sound basis of economic prosperity on which the further progress of the colored people may be based. No progress can be made on a W. P. A. wage basis, because its cost is so great to the Nation that it will never do more than provide a bare subsistence. In fact, if it continues long, and more and more of the colored people are reduced to this status, it perhaps will not restore slavery, but it will create a condition very close to serfdom, in which there is no hope and no future. Any race which relies on the help of others, whether it be the government or private individuals, demoralizes itself by teaching its members to lean on others. Your progress has been based on the magnificent efforts of your own leaders, many of them in the Methodist Episcopal Church.

I do not mean to say that you should not look to government for action, but that action should not be a dole, but the protection of your constitutional rights to which you are entitled. If you can be assured the unqualified enforcement of the thirteenth, fourteenth, and fifteenth amendments, you have the basis on which further progress can be made the moment a reasonable prosperity is restored in the United States. That is the ground on which you are entitled to an antilynching law to protect in practice rights guaranteed in theory by the Constitution.

No one can be more interested than you in the maintenance of the constitutional protection of minority groups, and the existence of independent courts to uphold the rights of the minorities. We have seen in Russia and Germany what happens to minorities under a totalitarian state. The more a people are regimented, the more the government decides what jobs people shall have and what their rewards shall be, the worse is the condition of the minority. You can be quite certain that if we ever get to socialism in the United States a race which represents only 10 percent of the total population is going to get the worst jobs in the most undesirable industries.

Fortunately, the people of the United States are turning more and more away from totalitarianism and regimentation and socialism. They are determined to work out their salvation along the lines of our Constitution, of individual initiative, and of free commerce. I am hopeful that that determination may lead to economic prosperity. Any considerable unemployment in the United States is particularly hard upon the colored people, and checks a great deal of the intellectual progress, which, after all, must be based on a reasonable economic condition. There is undoubtedly much economic discrimination against the colored people in this country, but progress has been made, and more progress can be made, in seeing that colored people are employed in more and more lines of business activity and more and more fields of government activity. Even in the service of the Government today there is a substantial discrimination which should be removed.

But the colored people have shown that they can develop leadership and progress through their own efforts. The African Methodist Episcopal Church has itself given the answer to the question whether the Negro has a capacity for organization and for leadership. Christian manhood and a spirit of independent thinking and action are its great contributions. As the progress of the colored people continues, the spirit of your great leader, Richard

Allen, will be found to inspire the bishops of today, who will lead on in the struggle for greater freedom and a larger security for all men and women, without regard to their color or the rank of life to which they were born.

Socialized Medicine

EXTENSION OF REMARKS

OF

HON. JOSIAH W. BAILEY

OF NORTH CAROLINA

IN THE SENATE OF THE UNITED STATES

Friday, July 7 (legislative day of Thursday, July 6), 1939

ADDRESS BY DR. R. S. CRISPELL

Mr. BAILEY. Mr. President, I ask leave to have printed in the Appendix of the RECORD a discussion of socialized medicine by Dr. R. S. Crispell, of Duke University.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

SOCIALIZED MEDICINE

(A discussion by Dr. R. S. Crispell, of Duke University)

Socialized medicine and the related topics of medical economics, the cost of medical care, State medicine, and the relations in general of the medical profession and the public are highly complex and controversial. The more questions and problems that are raised, the more appear. Misinterpretations are easy and solutions difficult.

Socialized medicine cannot be defined. Perhaps the nearest we can come in attempting to do so is to say that it is anything that is different from the present individualistic, competitive practice of medicine; anything involving any more extramedical cooperation and organization than we have at present.

The question is to the fore at the present time—somewhat to the confusion of all concerned—especially the doctors. The New Deal has tackled our economic structure and has created a great ado about the one-third who are ill-fed, ill-housed, ill-clothed. Now it has dragged in the ill-medically cared for—and intimates that they constitute not one-third but one-half of our population.

The juggling with our "general" economy—on a national scale—setting up surveys and proposals and organizations involving billions of dollars, has left everybody, including the doctors, stunned and confused. Everyone was aware that the general national economy faltered, became depressed, and threatened to break down. And medical economy was involved. But doctors did not—and do not—realize and do not grant that medical economy threatened to do likewise. As a matter of fact, the doctors thought that things were going along fairly well and about as usual, with signs of slow but steady progress until the New Deal, forcing things from the medical point of view, started to make a social issue of medicine.

Historically, there are three learned professions. (At present there are many more.) But medicine, law, and theology all go back to ancient times and have stood together. Hitherto in our rugged individualism, times past—and forever, according to some—we have gone to the lawyer for legal advice and practice; and we have expected to come away lucky if we came away with our shirt. It was supposed to be good for the soul of the clergyman if we paid him little or nothing. If we paid our doctor in our first burst of gratitude upon recovery, it was all right to both parties concerned. If we waited, our second thoughts often were that we really did not deserve to be sick, and therefore the doctor did not deserve to be paid. Years of this have reconciled the doctor to this.

But now all is different. Medical care has been placed by the New Deal on a par with food, clothing, and shelter. The question of legal and theolcgical practices and economics have not been raised. Apparently they are not so essential—perhaps a bit of a luxury. The physician has certainly outdistanced his colleagues the lawyer and the clergyman. He holds the spotlight. All of this is very flattering to the medical man in a way, but more discouraging, in that he prefers to work quietly and to be the master of his own house. But change has come to the doctor in this changing world. The issues have been raised. There is no use to deny them or to rail against them. The best thing to do now is to air the problems concerned and to see what can best be done about them. The medical profession conforms to and is affected by the social system of which it is a part. History teaches that the position of the physician in society is never determined by the physician himself, but by the society he is serving. Changes, progress, and developments can be opposed, retarded, but not stopped. One can easily be swamped with problems and with statistics, but time is limited, so that we shall confine ourselves to some propositions, attempting to restrain bias and final conclusions as to solutions.

Perhaps we can get a start by somewhat arbitrarily and artificially and with a little difficulty dividing medicine into a professional side and an economic side. The professional side would include the art and science of medicine and the traditions and ethics. These have accumulated gradually over a period of centuries, with remarkable developments in the science of medicine in the last 30 or 40 years. The economic side of medicine would include the profit from practice to the doctor and the cost to the patient or public. Much to our surprise, since we did not look upon him in that way, in the New Deal terminology the patient has become a consumer.

It is the conservative medical contention that things were going along fairly satisfactorily to doctor, patient, and public, and that, while conditions were not ideal, progress had been made in the past and there were promises by a natural evolutionary process for more in the future under the old-established way of doing things—denoted laissez-faire by the new dealers. Medicine and medical practitioners by aptitude and training are individualistic and conservative. This is well. No one wants a doctor who is jumping at a hundred and one panaceas and cures, be they medical or social. And patients prefer an individual practitioner with a personal relationship. In some ways it seems dangerous to tamper with a highly complex and technical organization and system that is working reasonably well.

But enter the consumer! The medical profession maintains that it has controlled and can continue to control satisfactorily all the relationships between doctor and patient, both professional and economic. And the ultraconservative and probably the majority medical opinion is that the doctor and the doctor alone can and should continue to do so.

But the consumer now enters medical as he has the "general" economy. An interesting side line on viewing the patient as a consumer is the proposition never before raised to any extent in the medical mind under the old dispensation if the patient is a consumer and if he pays for everything else he consumes—food, shelter, clothing, etc.—then why should not he pay for all the medical care he consumes? Hitherto, following medical ethics and traditions, a good proportion of medical time and energy was cheerfully given without thoughts of pay—to the tune of a million and a half dollars a day of charity work, it has been figured. If medicine is going to be reduced to a matter of dollars and cents, let's bring in these figures, say the doctors.

The agitation, disturbance, or controversy, or whatever you want to call it, really goes back to the golden era before the crash of 1929 and the economic depression—to 1927, as a matter of fact—with the formation of the Committee for a Study of the Cost of Medical Care. This committee, with over a million dollars at its disposal to spend, with lay people in direction and in the majority, although there was a medical minority, studied, surveyed, and published for 5 years, culminating in a final report published in December of 1932. The fat was in the fire, although you may remember at that time and for some months thereafter most people were so concerned with general economics that they had little time to pay attention to medical economics. But the doctors started to burn. Most of them on the committee even refused to concur in the majority report and instead submitted an opposing minority one.

We shall try not to mow you down with the statistics, propositions, and issues that have been bandied about since this survey started over 11 years ago, but here are some of them:

The total cost of medical care is not exorbitant, but both the cost and the care are badly distributed and there are inefficiencies. It was found that, including every possible thing—not only the cost of doctors and nurses and hospitals and drugs, but also patent medicines, chiropractors, and other nonmedical practices and practitioners—4 percent of the national income was spent in 1929 on this all-inclusive medical care (national income, $90,000,000,000; all-inclusive cost of medical care $3,500,000,000) * * * about $30 per capita per year. (It must be remembered that since 1929 the annual national income has gone down one-third to around $60,000,000,000. There are no statistics as to the percentage or as to the total cost of medical care subsequently.)

If you will allow me to reduce everything to approximate round figures, and if you will remember the figure of three and one-half billions of dollars in 1929, it may save the mental confusion that is apt to arise in spite of living over 5 years under the New Deal. The total cost of medical care, around three and one-half billions, was just a little over the expenditures, respectively, for recreation, education, and for the combined costs for tobacco, confections, ice cream, and soft drinks, and about one-half of the money spent in 1929 for automobiles (1937 statistics indicate a $5,000,000,000 national expenditure for alcoholic beverages). About three and one-half billions represented in 1929 the capital investment in the over 7,000 hospitals of the country with their about 1,000,000 hospital beds and with a capital improvement at the rate of about $200,000,000 a year. Total capital invested, hospitals, physicians' equipment, etc., $5,850,000.

In the aggregate there is a business side to medicine, and the statistics brought out by this original and subsequent surveys mount up enormously. About 1,100,000 people were engaged in dispensing medical services and allied endeavors—including about 150,000 doctors, about 125,000 in private practice, and about 25,000 among the personnel in medical institutions and organizations.

Also swelling the total of over 550,000 engaged in the private dispensing of medical care are 56,000 dentists, 118,000 graduate nurses, 150,000 practical nurses, 47,000 midwives, 4,900 chiropodists, 20,000 optometrists, 7,700 osteopaths, 16,000 chiropractors, 2,500 naturopaths, 10,000 religious healers. And, in addition to the 25,000 doctors swelling the personnel in medical institutions and organizations to over 530,000, are 5,600 dentists, 77,000 graduate nurses, 80,000 student nurses, 18,800 public-health and industrial nurses, 132,000 pharmacists, 196,000 lay personnel in hospitals, clinics, and public-health agencies. About 30 percent of the total cost of medical care went to the doctors—the neat sum of around $1,000,000,000—but then—and now—it was found and accepted that doctors, on the whole and by and large, are poorly paid rather than overpaid—taking into consideration the long, expensive medical education, demanding about 10 years of training following high school, and involving an expenditure of ten to twenty thousand dollars, followed by an exacting and trying and responsible occupation thereafter, with day and night work, and with a 60-hour week an unobtainable and unrealizable goal, much less a 40-hour week one.

The income of a medical practitioner can be divided into a gross one, and this less the 40 percent that it is figured that is necessary for professional expenses into a net income. In 1929 incomes were distributed very unevenly, with actual incomes inadequate for a large number of practitioners, while they were more than adequate for some others. But less than 3 percent of the profession made over $10,000 a year, and for each of these there were three who made less than $2,500. The average net income was $5,300, the median net $3,800. One-third of all private general practitioners netted less than $2,500.

The New Deal incorporated the cost of medical care in the agitation about social security, so that by 1935 there appeared a Federal interdepartmental committee and council to coordinate health and welfare activities. A national-health survey was started by the United States Public Health Service. This led to a National Health Conference in July of this year, 1938, and the smoke of this great battle has not as yet entirely blown away. Perhaps you have read about it, as well as the proposals toward a national-health program submitted to President Roosevelt in February of this year, 1938. Many of the complicated figures, statistics, and propositions of the original reports of the committee on the cost of medical care were utilized, but added to and embellished so that they are dwarfed and difficult to find in the New Deal grandiosity of millions and billions.

The new agitation recognizes the great accomplishments of preventive medicine in the United States but draws a distinction between public prevention (public health as hitherto constituted) and private prevention, that is, with individuals and with individual illnesses hitherto dealt with mainly in private practice rather than in public health.

Incidentally, in order to limit this limitless subject somewhere, we are not going to discuss public health. Not only Roosevelt but everyone else accepts Disraeli's dictum that "Public health is the foundation upon which rests the happiness of the people and the welfare of the state"; and the corollary, "Medical care is necessary for the maintenance of the health of the people and should be provided to all who need it." There is general agreement, lay and medical, as to the field of public health and as to the neglect of public health, and as to the necessity of building up and expanding public health and expending more money on it. In 1929, out of a total per capita expenditure of $30—as the cost of all medical care—less than $1 was spent for public health locally by the State and by the Federal Governments combined. The local expenditures were sometimes, and still are, only a few cents. Piteously inadequate. In 1929 the per capita expenditure in the United States for medicines was $5.49, and over one-half of this was for patent medicines and self-medication, mostly wasted the profession is inclined to think.

The new national health survey program and conference has become quite excited over the present status and needs in maternity, infancy, and childhood welfare and health. They point out the triumphs in the control of communicable diseases (at least of those for which medical science has found a specific cause or control) and the decrease in the death rate from 19 per thousand in 1900 to 11 per thousand in 1935 (brought about under the old dispensation, the doctors cannot help from pointing out). But the truth that the life expectancy of a person of 50 is not much different than it was 40 years ago is emphasized, more sentimentally than scientifically, according to the medical way of thinking, since this brings up the subject of degenerative diseases (arteriosclerosis, etc.)—those of later life—for which medicine has evolved no specific treatment or control. Special attention is also paid to the problems of pneumonia, venereal disease, and malaria, and there is no denying that there could be more and better social endeavors toward their prevention and diagnosis. But treatment has been, is, and perhaps in the future should be more a matter of individual practice.

There is no medical reason to believe that any more socialized or State attack on the problems of cancer would accomplish any more than is being done at present, except spend still more vast sums of money. There has already been a socialization of medicine. Both the doctors and the public have grown accustomed to socialized activities in public-health work, in the Army, especially during the World War, in industry, and in the health work in the school system.

We have and we need further social organization in handling the large problems concerning the control of communicable diseases, tuberculosis, orthopedic conditions, and mental and nervous disorders. Doctors have whole-heartedly initiated and supported State and social programs and institutions dealing with these problems.

No intelligent thinking doctor is unmindful of his public obligations. He remembers that he practices medicine not by divine right but by licensure through the legislature and ultimately because of a mandate of the public. And he realizes that he and his practice are subject to a critical review. Except for the die-hard conservatives, all doctors admit there is need for greater cooperation, organization, and planning in dispensing medical care and services. No one doctor can master the modern field of medicine and no doctor can practice modern medicine alone. He needs equipment, hospitals, laboratories, the help of other doctors.

The doctors are the first to agree that there have been some evils in too great specialization in medicine. But these evils have developed because of some conditions not altogether under medical or any other control and partly due to the fault of the laity. There is an honest endeavor underway in medical circles to restore the number, prestige, and dignity of the general practitioners—the beloved and lamented family doctor of old—and to give him an income fitting his worth and comparable to that of the specialists.

But doctors are universally against State medicine, if the distinction between social medicine and State medicine can be drawn and seen. Hitherto mention has been made only concerning social medicine. State medicine means taking over all, or practically all, the practice of medicine and medical care as a State or governmental function, with doctors salaried employees of the governments. Everyone knows this would involve a disastrous loss of individual initiative and resourcefulness, a tangle of red tape; in short, a bureaucracy that would be unsatisfactory to all concerned, doctors and public. The doctor demands, especially in a medical emergency, a free hand. He objects to reports, limitations, any dictation, especially lay control.

There are few people, lay or medical, who advocate State medicine. The most evangelical sociologist does not venture to say as to what medicine should be practiced, as to the content of medicine, as it were, but claims only the right to speak as to how, under what conditions, medicine should be practiced. In other words, all agree that the professional side of medicine should remain entirely in the hands of doctors, the admission and training in medical schools, the standards of practice, any censorship or disciplining of practitioners, etc. All agree that medicine has done this very well—has cleaned up its house and kept it remarkably clean and without scandal. There is no reason to believe that this will not continue in the future, and perhaps even better and more efficiently. But it is in the economic side of medicine that others maintain they have a right to concern themselves, since they are interested parties, and they say that medicine has not made the phenomenal progress as an economic activity that it has as a professional one. Another red flag to the medical profession is any kind of group, contract, or corporate practice that smacks of lay control or commercialism. The medial insistence on no advertising may seem droll to a business or newspaperman, but the benefits of medical ethics as to no patents or secrecy about any new medical discoveries are obvious.

It is true that there is a sufficient number of physicians in the country, but that they could be better distributed. Doctors, especially the younger ones, tend to remain or gather in urban centers where professional and economic opportunities are greater and hospitals are available, and they tend to avoid rural communities with their hardships for the doctor. There is 1 doctor to every 571 people in California, 1 to every 1,431 in South Carolina. But conditions in this regard seem either to be self-correcting or medically correctable—and they are not alarming. The cure for this seems to be that practice in the underprivileged areas must be more attractive from both the professional and the economic points of view before the young physicians can be expected to settle in these areas.

True, 1,300 of the 3,300 counties in the United States are without hospitals and more hospitals are needed—perhaps the 500 new ones advocated by the new national health program. However, hospital facilities are not identical with county boundaries. Perhaps the country as a whole has a deficiency of about 400,000 hospital beds and that the ones we now have are maldistributed. It is true that there is 1 hospital bed for every 154 people in Wisconsin and only 1 for every 749 in South Carolina.

There is a great lag between the amount of medical knowledge we have and the amount we apply at present. There are economic barriers between those in need of service and those prepared and equipped to furnish service. Perhaps 20 percent—totaling 40 percent of our population—is marginal, with an income of $1,000 or less per year per family. If this be so, these people denoted the medically needy can pay nothing or so little and with such sacrifice for any medical care, that some provisions will have to be made for these unfortunates and indigents, to receive medical care—and not as charity but as their due. The American medical profession will be found sympathetic and helpful in formulating any reasonable solution of these pressing problems.

But the personal relationship between doctor and patient must be kept inviolable, and in considering the problems certain factors of human nature and human psychology must be considered. First, one can be most successfully treated by a physician on one's own

choice in whom one has confidence. Second, one is apt to criticize, undervaluate, and reject free medical attention. Witness the attitudes toward the Medical Department of the Army, in the Veterans' Bureau, in the industrial, or any other organizations where medical care is dispensed free, sometimes even in free hospital clinics. Many people would abuse the right to consult a doctor without having to pay some financial penalty to do so. Doctors are human. They would react to this abuse, and if they became overworked (and to the lack of a profit incentive if they were salaried) by becoming superficial, careless, casual. A sick man will travel far and at a great sacrifice, ignoring the doctor at hand, if he thinks there is another one who can help or cure him more quickly and more successfully. With the most extreme system of social or State medicine proposed, the private practice of medicine would not be abolished and we should see in existence two parallel, if not two clashing, systems under State medicine. The established practitioners and specialists might welcome State medicine if it would free their conscience and release the load of charity patients they now look after. They would refer them to the State doctor, and devote all of their time and energy to their presumptively lucrative practice.

And cold, realistic, biologic facts might enter the argument. By the most utopian schemes death will not be abolished. Death seems to be a biologic, if not a theologic, necessity. There will always be a number of diseases, especially degenerative ones, that will be unavoidable and incurable.

Some day some cold eugenist is coming along and he is going to increase the horror of the surveyors who found that there is sometimes inadequate medical attention for the 1,100,000 births occuring annually in families which are on relief or in which the income is less than $1,000 a year by asking why so many babies are allowed to be born and in such disproportionate numbers to this class. And if the one questioned is not thereby overcome, the eugenist will follow this up by asking if it is not dysgenic to lower too much the infant mortality of the premature, debilitated, etc., infants, since they are notoriously so subject to all sorts of future disorders and incapacities.

In all the new proposals there is no mention of eugenics, birth control, and sterilization—of heredity or of human folly as factors in disease. Sickness as a cause of poverty and dependency is stressed, but the, at least, equally true facts that poverty and dependency cause sickness are understressed. Perhaps poverty and dependency can be abolished more easily and sooner than sickness. Any great expansion of medical facilities will demand some sort of insurance schemes involving vast sums of money or markedly increased taxation—or both. With the sums involved, philanthropy, private and professional and industrial, cannot be counted on as previously.

Hospital insurance, as a private rather than as a public enterprise, met a little medical opposition because of the fear of the possibilities of lay control and meddling. But hospital insurance has been started and is expanding rapidly and it has won the almost universal approval of medicine, private and organized.

But hospital insurance does not provide for professional fees. The economically privileged people who need it least do receive the most medical care. And the underprivileged or medically needy who are in need of medical care most receive the least. Yet this latter group—one-third to one-half of the population—cannot afford much, if any, health insurance of any kind. What is the solution to this? Various schemes have been recommended and some have been tried out, and further ones should be, with medical approval. But it remains a great question.

If experimentations and developments start from below in the local communities, rather than being imposed from above, nationally local medical centers have been recommended and advocated, and also local health council with the medical profession in the majority and since they are best qualified to know the problems, in control, but with some public-spirited laymen as members who would acquire an intelligent interest and knowledge of the medical situation to advise, especially economically.

Like individuals, a community which will help itself, if it is at all possible to do so, will do better and will deserve better. As a rule, a community receives the medical care that it deserves.

Let us scrutinize this social compact before we sign it.

Our new Federal public health program proposes to take over or to subsidize about two-thirds of the total cost of medical care, involving an expenditure of over $2,000,000,000 a year. Two hundred million dollars for an expansion of public health and maternal and child-health services, $165,000,000 a year for additional specialized services for children, especially crippled children, $146,500,000 for additional hospitals and hospital beds, $400,000,000 annually to provide medical care for the medically needy, etc., half to be paid by the Federal, the other half by the State and local governments.

In addition, of more interest to the businessman and employer than to the medical man, a system of sickness insurance similar to unemployment and old-age insurance has been recommended. Other schemes to finance the gigantically expanded costs for medical care and social welfare involve other proposals to do so by means of insurance or taxation, or both. This would cost over $2,000,000,000 and this combined new expenditures of four or five billion dollars in addition to our Federal Budget soaring around $10,000,000,000 a year. Nice sums if you can get them.

It is proposed to submit this new health and welfare legislation to the next Congress. The medical profession asks that we go slowly and give due thought and consideration to this not only in its relation to the profession but also to the national economy, and that we achieve our ends by evolution rather than by revolution.

The Licensed Radio

EXTENSION OF REMARKS

OF

HON. CHAN GURNEY

OF SOUTH DAKOTA

IN THE SENATE OF THE UNITED STATES

Friday, July 7 (legislative day of Thursday, July 6), 1939

ARTICLE BY WESTBROOK PEGLER

Mr. GURNEY. Mr. President, I ask permission to have printed in the RECORD an article by Westbrook Pegler on the subject of the Licensed Radio.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

[From the Washington Post]

THE LICENSED RADIO

(By Westbrook Pegler)

It looks as though the perfidious press will have to take over the fight to establish freedom of the radio, which the President, Mr. Farley, and Mr. Ickes so often extol as an agency of pure expression. The radio companies live by license from a political bureau of the New Deal which has the power to harass, intimidate, and, ultimately, ruin them. They are, as a group, a dangerous rival of the newspapers, which have had to share with radio the advertising revenue which once was particularly all theirs. The press, therefore, has a selfish motive for wishing the worst of luck, but, ironically, finds itself compelled to assist its commercial rival in a feeble struggle against coercion and censorship lest a controlled radio be used as a propaganda arm to destroy the freedom of the press.

Although Mr. Roosevelt has said that in some communities untruth and exaggerated halftruth may be overtaken only by radio and Mr. Farley has declared that only by air may he present a case to the people unedited, radio finds itself afraid to urge its own case over its own medium. If radio did so it would necessarily attack the political agency of the New Deal which controls its conduct and issues the licenses by which it operates.

POLITICAL CONTROL OF RADIO STRESSED

If it did that, it would displease its political bosses and risk painful or disastrous reprisals. Therefore, radio relies on the newspapers to present its case to the public, and it has been the press which has emphasized the hidden significance of the ruling of the Communications Commission which requires that international broadcasts must promote international good will, understanding, and cooperation. This ruling might be invoked to rule off the President and Mr. Ickes themselves—doubtless an unforeseen possibility—but if the same principle were applied to domestic broadcasts, the broadcasters would be obliged to promote internal good will, understanding, and cooperation according to the Commission's interpretation.

Surely the Commission would not regard criticism of the New Deal or itself, as a contribution to internal good will, understanding, and cooperation. In fact, in the press such criticism has been fiercely resented, and, for punishment, the New Deal has repeatedly praised the radio to the detriment of the papers but without explaining the uncertain and the risky state in which radio lives under political control.

CANNED SPEECHES GIVEN TO STATIONS

The President recently said that the people have a right to expect their Government to keep them supplied with sober facts, but left unsaid the fact that the New Deal has been sending out pancakes, or radio records, with a sly but firm intimation that these pancakes had better be given on the air. They are accompanied by a request for accurate information as to when they were played, and, although this might express an innocent curiosity, it might also conceal an intention to check up and discipline stations which found the pancakes inappropriate. As to whether they contain sober facts there must be some dispute, but it may safely be assumed that the Government departments are putting out no sober facts which criticize the administration adversely.

There is a difficulty in the fact that the air belongs to the Nation, so to speak, and therefore must be subject to Government regulation. That much is not disputed, but it does not mean that the air belongs to the New Deal any more than it belongs to the Republican Party. But in using the radio for New Deal propaganda the administration puts itself in the position of a trustee who uses his authority to promote his own interests and impair the interests of the trust. For certainly if radio is allowed to live under frank or implied coercion it loses that purity which the President found so admirable—indeed, its chief virtue.

LIVES UNDER THREAT OF PARTISAN DISCIPLINE

But radio itself lives in a state of fear and political jitters. Individuals in the business may pretend to admire the Commission and its methods, but they are open to the obvious suspicion

that they are playing ball with the New Deal for the advantage which it will bring them in the form of valuable official favor.

Others realize that the industry lives under a threat of partisan political discipline and looks to their economic enemy, the press, for help in a fight for independence, afraid, however, to speak for publication or appear anywhere in the picture except as confidential informants on matters which radio dares not appeal to the public over its own medium.

Forest Service Is Popular

EXTENSION OF REMARKS

OF

HON. THOMAS A. JENKINS

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Monday, July 10, 1939

Mr. JENKINS of Ohio. Mr. Speaker, there is no more popular department in the Government than the Forest Service. This is partly because of its competent personnel and partly because it deals with nature and nature's products. Its activities are interesting to all classes of people.

The Forest Service has a personnel of about 4,700 regular employees and an equal number of seasonal employees who work in the summer months.

The Forest Service operates under the Department of Agriculture. Mr. F. A. Silcox is the Chief of the Service, Mr. C. M. Granger is the Chief of the National Forest Divisions, Mr. Earl W. Tinker is the Chief of the State and Private Forest Divisions, Mr. C. L. Forsling is the Chief of the Forest Research Division, Mr. Earl W. Loveridge is the Chief of Administrative Management and Information Divisions, and Mr. L. F. Kneipp is the Chief of the Acquisition Divisions.

The active personnel in the field is handled through regional foresters, who have under their direction forest supervisors and district rangers. Those in charge of these various departments must be men of very special qualifications.

The activities of the Forest Service are widely scattered. The Service has under its jurisdiction about 175,000,000 acres of forest land. The largest single forest unit is known as the Superior Forest, located in Minnesota, and contains approximately 2,000,000 acres.

The land for forestry development is purchased through a congressional committee known as the National Forest Reservation Commission. The membership on this Commission consists of the Secretary of War, the Secretary of the Interior, and the Secretary of Agriculture, together with two Congressmen and two Senators. The Congressmen on this Commission at this time are Hon. ROY O. WOODRUFF, of Michigan, and Hon. WALL DOXEY, of Mississippi. The Senators are Hon. WALTER F. GEORGE, of Georgia, and Hon. STYLES BRIDGES, of New Hampshire.

I wish to discuss briefly the land-purchase program of this Commission as it applies to the State of Ohio. In 1934 the Forest Service began to operate in Ohio. It set up five units, which are as follows: Symmes Creek unit, Little Scioto unit, Muskingum unit, McArthur unit, and Hocking Valley unit.

Each and all of these units are located in southeastern Ohio. There is no available forest land anywhere in Ohio except in a few of the counties of the southern and southeastern part of the State. The survey made by the Forest Service shows that there are 1,466,000 acres of land well adapted to the activities of the Forest Service but that 375,000 acres of the same are too valuable to be considered for purchase by the Forest Service. There is therefore about a million acres of available forest land in Ohio that can be purchased at an average of about $6 per acre. The Forest Service took options for a large portion of this available acreage but was only able to purchase 34,234 acres in the State.

It is conceded that there is no part of the United States better adapted for the growth of the finest hardwoods, such as walnut, hickory, white oak, and ash, than the southern Ohio territory.

In addition to its land purchases in Ohio, the Forest Service has established headquarters in Scioto County and also in Athens County and has maintained the same with a corps of capable men. They also located several C. C. C. camps in this territory. With this force the Service has been active and has cleaned up the territory already purchased and has planted many acres of trees. This organization has also constructed a beautiful lake in Lawrence County near the site of one of the famous old charcoal iron furnaces. The lake is given the name of Vesuvius Lake because of its location near old Vesuvius furnace. Vesuvius Lake will be one of the most beautiful lakes under the jurisdiction of the Forest Service. It is located in the hills and in the center of the 4,000-acre tract of woodland. It is located near large centers of population and no doubt will be the attraction that will bring tremendous crowds to its shores. It has a shore line of more than 8 miles. Attractive trails and driveways will be opened for the recreation and pleasure of the people. A million people live within 60 miles of this beautiful lake.

No State in the Union with one-half the population and business of the State of Ohio has within its borders so few places of recreation. Most of the area of Ohio consists of fine, valuable farm lands. Although Ohio ranks fifth or sixth in the value of its agricultural products, it is also one of the leading industrial States of the Union. It has neglected providing recreational centers for its people. The roads leading south into the resort sections of the Kentucky, West Virginia, and Tennessee Mountains carry more Ohio cars than cars of all other States combined. Likewise, Michigan, whose tourist patronage each year amounts to $300,000,000, mostly due to her recreational advantages, gets more of her patronage from Ohio than from any other State. Ohio must strive to hold this money at home. The hills of southern Ohio are as beautiful as the hills anywhere. There are an abundance of locations through southern Ohio where beautiful lakes and other recreational centers can be located. The Berkshires cannot surpass southern Ohio in beauty when the maples and the red gums take on their gorgeous hues when the fall breezes come with their bracing tang. The lakes of the flat countries of the North cannot compare in beauty to the lakes that can be constructed in the coves and glens among the wooded hills of southern Ohio.

Because of lack of funds the National Forest Reservation Commission was forced to reduce its land purchases. It appeared that the most effective way to reduce its purchases was to discontinue purchases in the sections where only small acreages had already been purchased. It could be logically argued that they might more appropriately discontinue purchases in sections where they already had large purchases. However, the Commission established a rule that no more purchases be made in units where less than 20 percent of the available land had already been purchased. This stopped further purchases in Ohio because in no one of the five units had 20 percent been purchased.

Having encouraged the Forest Service to come into Ohio and to make purchases therein, I naturally was much disappointed at the turn of events that would prevent any additional purchases. With others I immediately began to consider plans to remove this restriction. It was apparent that appropriations must be increased and that the merits of Ohio's cause must again be presented. The Bureau of the Budget of the present session of Congress recommended to Congress that only two millions be appropriated to the Forest Service for the purchase of land. This was less than had been appropriated for this Service for years. I have maintained steadily that this is one service where the money invested will furnish wholesome employment and will also create wealth. After considerable effort in both branches of Congress the appropriation was increased to $3,000,000. This is the total amount that the Land Acquisition Department of the Forest Service will be permitted to spend for its work in the next fiscal year.

The National Forest Reservation Commission, at its meeting on July 6, modified its 20-percent regulation and has given orders for a resurvey of the whole situation. People of Ohio appreciate the action of the Commission and the moral support of the Forest Service. Because of the superior merit of the claims of the State of Ohio, I confidentially believe that during the next year the Forest Service will again be in the market for the purchase of lands in the various Ohio units. It should purchase immediately all the land that it has under option and other lands upon which the options have expired. This will comprise about 100,000 acres which the Forest Service should purchase as soon as possible. With annual purchases in reasonable amounts for a few years, the Forest Service will have secured most of the available land in Ohio. It is not the intention of the Forest Service to purchase valuable land and to remove the same from the tax duplicate. Neither would it be the purpose of the people of the State to encourage the purchase of valuable land which can be used for the production of annual crops.

While the Forest Service gives consideration to the recreational advantages of the land which it purchases, still its principal function is to take this cheap land and make it valuable by placing thereon a growth of valuable timber. Its purpose also is to give wholesome employment to men and boys and at the same time create wealth through the growth of trees. Their plan provides that as the old timber is cut and manufactured into timber products and that when the forests themselves will be manufactured into timber and sold, that 25 percent of all such sales shall go to the counties in which the timber is produced. An additional 10 percent is also paid to the road authorities for the construction and maintenance of roads and trails. The roads and trails in the forests themselves are maintained by the Forest Service.

I feel that our efforts in again having the Forest Service resume its purchases and its activities in Ohio will eventually increase the value of Ohio lands by millions of dollars. Recreational facilities of these forest areas will also be of much greater importance in Ohio than in many other States where they already have an abundance of such facilities. These activities on the part of the Federal Forest Service will act as a stimulant to the conservation activities of the State of Ohio, which in the past few years have extended their activities considerably. Friendly cooperation of the Federal and State Forest and Conservation Departments will mean much to the people of Ohio by way of recreation and by way of increased value of land and forest products.

British Royal Visit to America Was War Mission

EXTENSION OF REMARKS

OF

HON. MARTIN L. SWEENEY

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Monday, July 10, 1939

EDITORIAL FROM THE NEW YORK ENQUIRER OF JUNE 19, 1939

Mr. SWEENEY. Mr. Speaker, under leave granted me to extend my remarks in the RECORD, I include a very timely and patriotic editorial from the New York Enquirer under date of June 19, 1939:

[From the New York Enquirer of June 19, 1939]

BRITISH ROYAL VISIT TO AMERICA WAS WAR MISSION

Just as their Britannic Majesties' visit to the United States, a visit in which religion was brought into play in a prominent manner, came to an end, a special British envoy set off from London in order to expedite the signing of an alliance between anti-God Russia and the British Empire, whose sovereign George VI, is supreme head of the Church of England, and in addition numbers among his other titles that of Defender of the Faith.

The royal traveling show, with its super-Barnum publicity, which John Bull staged upon American soil in the visit of King George and Queen Elizabeth, while it caused a great deal of amused curiosity to the American people, has for them a vitally serious aspect.

All this expensive, glorified, and free entertainment was not provided for the purpose of attesting John Bull's warm regard for the United States. It was actuated by a selfish and characteristically British motive—the luring of hundreds and hundreds of thousands of the cream of America's young men to pour out their heart's blood in defense of that empire which is now working so eagerly to ally itself with anti-God Russia, and in addition to induce Uncle Sam to squander his monetary and other economic resources for the salvation of the empire of George VI and Queen Elizabeth.

The visit of the British sovereigns to the United States of America was a war mission, pure and simple.

It was a mission designed to befool us once more into disloyalty to the solemn injunction of George Washington, the man upon whose hallowed tomb at Mount Vernon the treacherous hands of England's monarch placed a wreath of ostensible tribute, that we ever take care against being drawn into the wars and other contentions of Europe.

Our good friends the British boast that they are a discerning and well-informed people. The illusory interpretation placed by them upon the reception accorded George VI and his consort in the United States evinces that they have a great deal to learn concerning the American people.

It was curiosity and a desire to see a free show that promised a great deal of amusement, rather than an intense friendship and regard for either the royal actors or their manager, John Bull, which brought out the crowds of Americans who watched the unfolding of the great comic pageant. Had Emperor Haile Selassie of Ethiopia and his Empress made a similar tour, and had they been accorded half the super-Barnum publicity enjoyed by the British sovereigns, they would have drawn much bigger crowds of Americans.

The size of the gatherings that came to see the British sovereigns was exaggerated by press and radio in an outlandishly laughable fashion. In the refusal of Americans to attend the World's Fair when George VI and his consort visited it, we find a real test of America's sentiments with regard to the royal visitors and their empire. The paucity of the attendance at the World's Fair on the day of the royal presence there amounted to a boycott. Let us quote the New York Daily News:

"The most severe blow was the surprisingly slim crowd that turned out on the occasion of the royal visit Saturday.

"Plans had been made to take care of a crowd of 1,000,000—Grover Whalen's experts had confidently estimated such a record-shattering attendance—but a final count showed that only 196,116 persons entered the fair's portals.

"In fact the attendance was the second lowest for a Saturday since the opening figure of 606,504 when President Roosevelt dedicated the fair. The only other Saturday on which attendance fell below the royal visit figure was when it rained virtually all day."

For the United States there is an intimate and alarming connection between this royal visit and the departure of Special Envoy William Strang, British Foreign Office counselor and expert on Stalinland, from the capital of the British Empire for the capital of the "red" Empire. They are all-important parts of a gigantic conspiracy to bring about a British-French-Soviet-American alliance for war and world domination in the interest of British, French, and Soviet despotism. That is the plain truth of the matter.

While the "excruciatingly delightful royal couple," as one of the sob brethren of the American press phrased it, were acting their roles upon the American stage, the heaviest emphasis was laid on England's centuries-old contribution to civilization and how essential it was that this Republic should always cooperate to the maximum with the great democracy represented by the British Commonwealth of Nations—that is, the British Empire, whose sovereign is also supreme head of the Church of England and enjoys the august title of Defender of the Faith.

And this appeal was made at a time when George VI and his Empire were moving hell itself to bring about a British alliance with Czar Josef of the anti-God Russia.

Blasphemy is the only suitable characterization of the misuse to which religion was put in order to advance the objective of the British royal visit here in view of the eagerness of George VI and his empire to bind themselves in a solemn compact with the land of Stalin—the enemy of liberty, the enemy of peace, the enemy of civilization, the enemy of Heaven itself—and in view of the centuries-old criminal record of John Bull, who did his momentous work for civilization with a Bible in one hand and a dagger in the other.

These are fateful days for the United States of America. A lavishly financed and powerful propaganda, inspired and directed by John Bull (the sanctimonious champion of peace and liberty, civilization, and religion, who cannot too soon bring about an alliance between himself and the terrestrial viceroy of Satan, Josef Stalin), is at work in every quarter of this land to encompass for the American people the supreme tragedy of hoodwinking Uncle Sam into another bloody and costly war crusade in Europe on the side of British, French, and Russian "democracy."

The visit of the English sovereigns was a most important contribution to this colossal campaign of deception.

Under the very dome of our National Capitol the international conspiracy to add a myriad of American dead to those who are already sleeping their last sad sleep far away from their beloved

kinsfolk and beloved country, as a result of our first war crusade in the Old World, is receiving wholehearted encouragement and vital support.

This Republic has a superabundance of problems of its own to solve. But they are not being solved.

It is nothing short of treason that high-placed American officials who were elected to serve America, and America alone, are leading participants in an international plot which means disaster of the first magnitude for our country.

One of the most terrible fruits of the success of this conspiracy would be the certain annihilation of America's civil and religious liberty and the transformation of this glorious Republic into a Hitlerized despotism.

It is only too clear to the American people, therefore, that they are face to face with an emergency which demands their unremitting attention.

The New York Enquirer is not and never has been engaged in an anti-British campaign. It is and always has been engaged in a pro-American campaign to save America from British exploitation and aggression. And it will continue that campaign just as long as there is need for it.

Emmett Owen—The Man

EXTENSION OF REMARKS
OF
HON. MALCOLM C. TARVER
OF GEORGIA
IN THE HOUSE OF REPRESENTATIVES
Monday, July 10, 1939

Mr. TARVER. Mr. Speaker, in the Congressional Directory for this session there appears in the biographical section, where Members customarily record outstanding facts concerning themselves and their careers, oftentimes at great length, a statement of seven words, indicative of the modesty and simplicity of the man who wrote it:

EMMETT MARSHALL OWEN, Democrat, of Griffin, Ga.

Others have spoken, and will speak again, of the oratorical brilliance of our deceased colleague, of the honors paid him by his people during many years of public service, of the unswerving fidelity with which he met fully and capably every requirement of public trust; but EMMETT OWEN made official record only of his name, that he was a Democrat, and that he resided in Griffin, Ga. The same innate reticence about himself and his accomplishments is evidenced by his labor of 7 years on the Committee on Agriculture, striving, struggling, thinking, and talking in the interest of a better deal for the farmers of the country who have been and are now passing through a period of terrible trial, with never an effort on his part to make the headlines or even to let his constituents know the important, faithful, and useful part he was playing in the formulation of farm legislation.

There are Members of the Congress whose oratory on every conceivable subject scintillates in the CONGRESSIONAL RECORD who never accomplish anything except to advertise themselves. All of us know that legislation in the main is accomplished here in the committee rooms and that the advices of Members in whom their colleagues have confidence when they talk as man-to-man around the committee table have far more weight than impassioned orations on the floor which few hear or even read. EMMETT OWEN knew this; and, knowing it, he used his abilities, his fine personality, the friendships that he made, where those assets would accomplish the most for his people. The stamp of his influence is indelibly impressed upon much of the important farm legislation enacted during the last 7 years.

His constituents elected him to Congress because he possessed those qualities which appeal to men everywhere and in all walks of life. He was loyal not only to his public trust but to his friends. He had one of the most gentle natures I have ever known. Everybody who knew him loved him. Members of the House who knew him well would take pleasure in helping him in his undertakings. No death in recent years has caused more general sorrow among the membership of the House of Representatives.

The Georgia delegation in the House will sorely miss him. His friendly cooperation in every effort for the advancement of Georgia's interests, his pleasant comradeship with every Member of the delegation, these are memories which shall forever hold their place in our hearts and minds. Georgia laments the passing of a distinguished citizen, the Fourth Congressional District sorrows over the loss of a faithful and capable Representative, but the Georgia delegation, while not unmindful of these losses, mourns most of all the departure from our circle of EMMETT OWEN—the man.

Indian Claims and Jurisdictional Resolutions

EXTENSION OF REMARKS
OF
HON. JOHN J. COCHRAN
OF MISSOURI
IN THE HOUSE OF REPRESENTATIVES
Monday, July 10, 1939

Mr. COCHRAN. Mr. Speaker, I have read with a great deal of interest the speech of the gentleman from South Dakota [Mr. CASE] in reference to legislation affecting Indians and Indian tribes. The gentleman from South Dakota goes into detail in regard to the attitude of Congress toward legislation of this character. He calls attention to the fact that only a few bills of minor importance have become law.

As one who has tried to prevent the passage of Indian jurisdictional legislation, I desire to explain the reason for my attitude. Several years ago an official of the Department of Justice called attention to the Committee on Expenditures of the situation confronting the Government in the Court of Claims where a hundred or more cases were pending as a result of resolutions passed by Congress. A hearing was held by the committee and Assistant Attorney General Harry W. Blair discussed the matter in detail. I desire the reader to note that this is a Government official, not a Congressman, speaking. I quote part of his testimony:

Mr. Chairman and gentlemen, these claims arise out of treaties made with the Indians, some of them going back as far as 1790. When jurisdiction is passed by Congress, a claim is filed, usually on just a statement of account in the Court of Claims. It is then sent to the Attorney General's office and also to the Interior Department, with the request that each of those find out from their records what the situation is between the Government and the particular Indian tribe. These are all tribal claims, not individual Indian claims.

The Department of the Interior, of course, having in its jurisdiction and having in its charge all the reports of all the Indian agents since the first negotiations with the particular tribe were started, is able to give from these reports all of the transactions between the Government and the tribe, the furnishing of them with food, the building of schools, what was done with their lands, whether the land was sold and the money turned into the tribal fund, as in accordance with the treaty, or not.

The General Accounting Office, of course, has a record of what moneys actually were spent. These claims, under these conditions, started growing in about 1920, but the great influx of claims was along in 1924 and thereafter. I do not know whether the fact that the Indian got the vote or citizenship along about that time had anything to do with it or not, but those claims have been coming in until there are now 99 cases pending in the Court of claims.

THREE BILLION DOLLARS INVOLVED

Taking the interest upon them, and approximating those which do not state the exact amounts of money that are sought, the total involved is close to $3,000,000,000.

The claims frequently are unfounded and imaginary; and, where there are offsets by payments, gratuities, and so forth, it is frequently possible, even if some sum of money is due, the offsets are greater than that.

Since the 1st day of January 1934, in the Court of Claims, the Government has defeated claims amounting to $369,000,000. There has not been a single judgment against the Government in the Court of Claims on these bills, which has cost the Government any money, since the 1st day of January 1934. I mention that date because that is the time I took charge of the Division. The record before that is correspondingly good.

A great many of these claims are fictitious; that is, they are imaginary, but the Indian tribes and the Indian societies throughout the country feel that they are entitled to their day in court, and, unless they do have their day in court, there is corresponding

dissatisfaction and belief that the Government has wronged the Indians in many instances when it has not at all.

There has been considerable discussion of the suggestion to Congress that some sort of tribunal be established to sift these claims before they reach the state where the Interior Department or the Comptroller General is asked to spend any large amounts of money in digging up the facts. That will be presented shortly, I understand, for the consideration of the Congress. That will be very helpful, because we are in this peculiar situation in regard to these cases: A petition is filed, a claim is filed in the Court of Claims, and the Government immediately goes to work, as I say, in the Interior Department and in the Comptroller General's offices assembling all this data.

In one of these cases it took 7 years to get this data together. I understand it cost over $150,000 to do that. But those facts can better be stated by the representatives of the Comptroller General's office, who are here.

GOVERNMENT FURNISHES ALL EVIDENCE

Here is the situation we find ourselves in: The Government furnishes all of the testimony in the case, and it is deposited over at the Court of Claims, and the attorney for the plaintiff goes in there and takes the testimony we have furnished, and then the suit progresses. We cannot deny it. We have not any testimony other than that. So that it is a proceeding where the Government is furnishing all the testimony; and if the Government has wronged anybody, it has to pay.

I do not think, in the last analysis, that there is anything unjust about that, or wrong about it, because if the Government of the United States does owe those Indians any money, I think everybody would like to see them paid; but the expense of getting all of that testimony together and of getting all that data together, and it so frequently results in nothing being accomplished except the satisfaction of the Indian tribe and the various friendly societies. It is for that reason that this matter of sifting out beforehand has recently been agitated.

The details, now, as to these bills: Some of the bills provide that the Government may have offsets for gratuities, etc., and some of them do not. The ones which do not are those affecting the Five Civilized Tribes. All of those tribes are located in Oklahoma. Occasionally one of the other tribes gets a bill through that does not have that in it, but it is exceedingly rare. I think there are nine pending in the Congress, and a large majority of those do not have that provision in them. That is a very helpful provision in defending the suits, and it seems to me a very fair provision, because many times the Government has had to furnish the money to help the Indians, and it would only seem right that, in any final accounting, the Government should be given credit for that.

GENERAL ACCOUNTING OFFICE VIEWS

Mr. Frank Yates, representing the General Accounting Office, also appeared before the committee. I likewise quote part of his testimony:

Mr. Chairman and gentlemen of the committee, much of the information we were prepared to present to the committee has already been well covered by Assistant Attorney General Blair and Mr. Stormont and, if I have observed correctly, the committee is already fully informed on the principal question involved; that is, the consideration of appropriate legislation that will give to the United States the uniform right of offset for certain expenditures, including gratuities, in pending and future causes. However, this committee has taken cognizance of the growing list of Indian treaty suits under jurisdictional acts, no doubt because of the very considerable expense in the General Accounting Office, Department of the Interior, and the Department of Justice, which the preparation and handling of the many cases has required, and because by far the largest burden falls upon the General Accounting Office in preparation of the reports for use by the Department of Justice in presenting the case of the United States I feel that I should discuss this angle of the matter even at the risk of some duplication.

WORK AND COST OF PREPARING REPORTS

After the filing of one of these suits the Department of Justice calls upon the General Accounting Office to prepare a report from the accounting records. Here is where the large, important, and expensive undertaking begins. From 1920 to 1926 the enormous task of preparing reports on cases then pending became so apparent that special preparations had to be made, including the establishment of a special organization in the General Accounting Office, the Indian Tribal Claims Section, and the obtaining of an additional appropriation to permit the conduct of this work.

In the beginning of this Indian tribal claims work it was necessary first to assemble in one place convenient for ready access the vast volume of scattered files of Indian accounts and claim settlements, going back in many instances for more than 100 years; their classification and segregation for examination purposes; and also their repair, which was frequently necessary because of disintegration, particularly at the folds, having been filed folded and having remained so filed over long periods of years.

This work also required a vast amount of research of the history of the tribes; their origin, migrations, and unions with other tribes; and their many treaties and agreements with the United States and between tribes. Much information, valuable and necessary to a proper disposition of the cases, was obtained from reports of the Bureau of Ethnology, House and Senate reports, and records of the War, Treasury, and Interior Departments.

The accounts and claim settlements covering payments to these Indians are not filed in this office by tribes but are filed in numerical sequence. To obtain for examination the particular accounts and claim settlements pertaining to particular tribes of Indians, it was necessary to know the origin of said Indians, their migrations, their unions, the treaties made with them, and the appropriations made in fulfillment of these treaties, and for other purposes. This information was obtainable only after a complete and exhaustive study and analysis of the Statutes at Large, the records and ledgers of the War, Treasury, and Interior Departments, the State Department treaty records, and other reference data.

It is estimated that 1,379,506 claim settlements and 83,299 accounts have been examined, analyzed, and classified in connection with the reports submitted. An account with its accompanying vouchers may be large or small depending upon the tribe or activity for which the disbursements were made. The accounts thus examined, analyzed, and classified covered vouchered expenditures of varying types and kinds in varying amounts and the larger accounts contain as many as 6,000 vouchers. The expenditures represented by these accounts were made from advances to disbursing officers on accountable warrants. Expenditures through claim settlements were those made direct by the accounting officers.

The largest and most involved report was the one made in connection with Sioux petition No. C–531. This report, comprising 4,385 pages of text, tabulations, and data, bound in 8 volumes, involved, among other things, the examination and analysis of 162,899 claim settlements and 7,279 accounts, containing approximately 600,000 vouchers, and the classification of the disbursements pertaining to the Sioux Indians. It involved also an exhaustive search and study of the Statutes at Large and all available records for determination of all appropriations, funds, accounts, etc., having relation to Sioux matters. Approximately 51 funds and 1,900 appropriations, covering the years from 1831 to 1925, were examined and analyzed in connection with the preparation of the report. The work on the Sioux report was started on March 1, 1925, and completed at an estimated cost of $177,344.89, and filed with the Department of Justice on April 12, 1932.

Other reports of some magnitude were the Assiniboine J–31, Cheyenne and Arapahoe K–103, Shoshone H–219, Duwamish F–275, Blackfeet E–427, and Chippewa H–155.

The Assiniboine report consisted of 1,322 typed pages of text, data, and tabulations, bound in two volumes. It involved the examination and analysis of 1,277 accounts and 46,716 claim settlements, and the classification of the disbursements pertaining to said Indians, and the estimated cost of its preparation was $13,787.

The Cheyenne and Arapahoe report consisted of 1,820 type pages of text, data, and tabulations, bound in three volumes. It involved the examination and analysis of 2,778 accounts and 97,028 claim settlements and the classification of disbursements pertaining to said Indians, and the estimated cost of its preparation was $41,402.86.

The Shoshone report consisted of 615 typed pages of text, data, and tabulations, bound in one volume. It involved the examination and analysis of 1,152 accounts and 44,249 claim settlements and the classification of disbursements pertaining to said Indians, and the estimated cost of its preparation was $14,879.85.

The Duwamish report consisted of 933 typed pages of text, data, and tabulations, bound in one volume. It involved the examination and analysis of 5,003 accounts and 51,265 claim settlements and the classification of disbursements pertaining to said Indians, and the estimated cost of its preparation was $36,770.64.

The Blackfeet report consisted of 717 typed pages of text, data, and tabulations, bound in one volume. It involved the examination and analysis of 2,339 accounts and 86,080 claim settlements, and the classification of disbursements pertaining to said Indians, and the estimated cost of its preparation was $33,833.31.

The Chippewa report consisted of 879 typed pages of text, data, and tabulations, bound in one volume. It involved the examination and analysis of 1,957 accounts and 75,052 claim settlements and the classification of disbursements pertaining to said Indians, and the estimated cost of its preparation was $30,376.33.

The office for a time, particularly in the early stages of the work, was confronted with many real and vexing problems, outstanding among which was the form the report was to take, and the extent to which the records were to be examined and the reports made.

Generally speaking, the various treaties with the Indians provided for payments in money at stated intervals, for the furnishing of grist and saw mills, for schools, teachers, and equipment, for subsistence, clothing, etc. In many of these cases there were claims that the treaty provisions were not fulfilled, and in order to ascertain and show to what extent and in what manner such provisions were fulfilled it was necessary to examine and list disbursements made under treaty and nontreaty appropriations. The form and details of the accounting reports were largely governed by requirements of the treaties, agreements, and acts in each case and the reports were augmented by such explanatory references from the reports of the Secretary of War and the Commissioner of Indian Affairs as would tend to show or account for the failure or apparent failure of the United States to fulfill its treaty obligations.

An accurate estimate of the cost of this work in the General Accounting Office to date is $1,000,000.

There have been enacted 31 separate jurisdictional acts and some amendments to permit additional bands or groups to sue under the original acts. Under these enactments 110 petitions have been filed in the Court of Claims and forwarded to the General Accounting Office for report, showing information in answer to or in con-

nection with the claims and contentions and requests for accountings contained in the petitions. Reports have been compiled on 104 of the petitions.

OFFSET PROVISIONS

From the beginning it has been the view of the Department of Justice and the General Accounting Office that in these suits by Indian tribes, bands, or groups for fulfillment of treaty obligations the United States should be permitted to offset not only all payments made upon the particular claims asserted but also all gratuity payments made to the claimant Indians—that is, payments outside of treaty obligations made because of the Government's interest in the civilization, education, subsistence, etc., of the Indians. It seems only reasonable to suppose, and I have no doubt the legislative record will indicate, that many of the appropriation provisions for gratuity payments to the various Indian tribes, etc., were enacted in consideration of the nonfulfillment of certain treaty obligations.

A large part of the cost of preparation of reports has been required in setting up therein the records of hundreds of millions of gratuity payments, and the expenditure thus entailed has at times been a gamble due to the uncertainty of the varying offset provisions contained in the acts and resultant doubt whether the Court of Claims would construe the provisions to permit offset for gratuity payments. It has been a profitable gamble, however, as in 16 cases already decided by the Court of Claims, involving claims totaling $345,574,636.78, wherein the court found for allowance a total of $13,594,623.87, offsets were allowed totaling $10,939,893.50, leaving the net total allowed by judgment of the court $2,654,730.37. But more than three-fourths of the causes are still pending and there is still some doubt as to what offsets the court will permit. It is safe to say that in a large group of the pending causes, more than 40 in number, pertaining to the Five Civilized Tribes (Cherokee, Seminole, Choctaw, Chickasaw, Creek), no offsets for gratuity payments may be allowed by the court under the jurisdictional acts now pertaining.

GOVERNMENT PROTECTED BY LEGISLATION

Following the hearing, as chairman of the committee I was instructed to call the matter to the attention of the Appropriations Committee of the House. The then chairman of the committee, the late Mr. Buchanan, of Texas, included in a deficiency bill a provision which, in brief, extends to the Government the right to offset the claims of the Indians by showing advances as well as gratuities made to the Indians.

Following the enactment of this legislation, many protests were filed by attorneys representing Indians in their cases before the court. They did not want the Government to protect itself.

Many of the bills referred to by the gentleman from South Dakota [Mr. CASE] would deny the Government this privilege, and it is bills of that character to which I have objected. Prior to this Congress practically all bills reported by the Committee on Indian Affairs of the Senate passed that body with little discussion. It is true that the bills failed to pass the House, which undoubtedly subjected Members of the House to criticism, because the Senator was able to secure the passage of the legislation, while the House did not approve.

Up to the start of this Congress neither the House nor the Senate committee ever secured a report on a bill other than from the Department of the Interior. Before objecting to the consideration of the legislation, I always secured a report from the Department of Justice and the General Accounting Office. The Department of Justice was charged with the responsibility of defending the Government in the cases before the Court of Claims, while the General Accounting Office was in possession of all the records.

Starting with the Seventy-sixth Congress, the committees of both the House and the Senate have secured reports from the Department of Justice and the General Accounting Office. These reports pointed out the disadvantage to the Government if the bills passed in the form they were introduced. The committees have not seen fit to accept the amendments recommended by the Department of Justice and the General Accounting Office, and until they do I for one feel that I will be justified in objecting to the consideration of the legislation.

WHAT THE ATTORNEYS WANT

A typical case is H. R. 2776. On this bill a minority report has been filed. I think it is a fair expression to say that the same can be said of most of the Indian bills, although the facts might not be identical. Therefore, I quote the minority views, which are as follows:

MINORITY VIEWS

This is the third jurisdictional bill proposed by the lawyers in an attempt to get several million dollars from the Federal Treasury upon the basis of a contingent fee for themselves—and if they get what this bill provides—they are no doubt entitled to a handsome fee. This is their third attempt at drafting bills.

The first jurisdictional act was passed in March 1927. It provided that the United States was to be allowed full offsets for any sums expended for the benefit of the Indians, including gratuities. A case was then commenced in the Court of Claims but the plaintiffs found that there was no hope for them to succeed under the terms of that act. So then they asked for another or second jurisdictional act which was passed by Congress in June 1930 wherein was added the provision that the court was to determine the rights which the Indians now for the first time claimed under the right of "immemorial possession."

Everything now having been fixed as desired, the plaintiffs went to trial again and their case was fully and fairly heard, and in April 1933 the court rendered its opinion, including special findings of fact and its conclusions of law, with an opinion by Judge Green in which three other judges concurred, the findings and judgment being adverse to the claims of the tribe. The record is voluminous and the court supported its findings and decision by reference to facts which were almost uncontrovertible. The plaintiffs then asked for a new trial, but the court denied this inasmuch as there was no error or evidence upon which a new trial could be awarded. The plaintiffs then applied for a writ of certiorari in the Supreme Court of the United States, and this also was denied; and the case was considered as finally closed.

So then we have here a case where two jurisdictional acts were granted to the plaintiffs, where they were given full and fair trial under the language in the acts which the attorneys themselves desired, and where new trial, and where writ of certiorari, and where appeal to the Supreme Court were all denied. Now there comes along this present proposal to open up the whole thing under this third jurisdictional bill.

In the drafting of bills during all of the years it would be difficult to find a measure more artfully drawn than the original H. R. 2776. Mr. O'CONNOR, who introduced the bill, does not claim to be the author of it.

In its original form this bill conferred the right of appeal to the Supreme Court, which is no longer granted in such cases under the later rules of procedure. The bill provides for a waiver of the lapse of time, or former adjudication and of statutes of limitations. The United States is not to be allowed to plead any estoppel, but may plead set-off only. Furthermore, the bill prevents the Government from having any set-offs or counterclaims which did not exist prior to March 1927, being more than 12 years ago. In the annals of procedure whoever before heard of a case where a defendant was not allowed set-offs or counterclaims for a period of 12 years previous to the time of trial? Furthermore, the bill as now proposed does not allow credits for sums paid by the United States to or for the benefit of the Assiniboine Nation for lands north of the Missouri River, nor for sums received for surplus lands in Fort Peck and Fort Belknap Reservations, nor for lands allotted to the Assiniboine Nation in those reservations, nor for any lands, nor the value thereof, still held undisposed of in those reservations. These limitations are unfair.

The original act, with unprecedented aplomb, stipulated that the Government must pay at least 93 cents an acre for the lands in question, this being based upon the idea that the land was worth $1.25 an acre in 1852 and that it would take about 27 cents per acre for cost of surveying and sale. But there was no corresponding ceiling beyond which the Indians could not go in proving values. This was a very comforting arrangement for lawyers representing the plaintiff. This was put into the bill notwithstanding that the Court of Claims found that these lands were not of the value of more than 50 cents per acre as a liberal estimate. Remember that this price is fixed as being away back in the early fifties, when this land was of little or no value at all, and when there was no sale for it, and no use to be made of it except as hunting ground for roaming Indians.

Notwithstanding committee amendments the bill still stands as a monumental affront to all concepts of trials and adjudications. The plaintiffs have already had two jurisdictional acts. They now want a third one which amounts to little less than a direct appropriation by Congress, leaving scarcely anything for the Court of Claims to determine.

WAIVER OF FORMER ADJUDICATION

The case was fully and fairly tried by the Court of Claims; every element of the claims involved in H. R. 2776, including offsets and land values, were fully presented to the court in the trial of the case. The court's decision on these matters cannot successfully be attacked. No valid reason can be advanced for reopening that decision. It is a dangerous and unwise thing for the Congress to do, and if done in this instance, no doubt it will lead to applications for similar relief by other tribes who have failed in the Court of Claims. In short, by the waiver of res adjudicata and the restriction upon offsets (offsets to which the court held the United States was justly entitled), the bill legislates a judgment. Regarding this question the Attorney General reported saying:

"It is proposed in the bill that the defense of res adjudicata be waived, although the claims of these Indians have been fully and fairly heard by the Court of Claims, after which a petition for certiorari was denied by the Supreme Court (292 U. S. 606).

Furthermore, the claims were adjudicated upon the same footing as have been those of Indian tribes generally in the Court of Claims, the offset (as in other cases) of payments by the United States made for the benefit of the Indians having resulted in no possibility of a balance in favor of the plaintiff. The reopening of a case under such circumstances by waiver of the defense of former adjudication would make the trial of Indian claims cases worse than useless for the United States as a defendant and would constitute an unwarranted burden on the Court of Claims."

The doctrine of res adjudicata is based upon equity. It restrains claimants from litigating anew such matters as have been drawn into controversy between them in previous cases. The decisions of a court of competent jurisdiction is and ought to be final and conclusive. If erroneous, it should stand, unless legally vacated or reversed. But in this case the Court of Claims, as well as the Supreme Court, refused to allow a new trial or to review the judgment.

It would be useless to recapitulate the eulogiums which courts and judges have lavished upon this most salutary doctrine. It is a fundamental concept in the organization of every jural society. Unless a judgment should at some point become final and have the quality of establishing irrefragable truth, litigation would become interminable. Endless confusion would result, and the courts would be stripped of their powers and functions.

THE FORMER DECISION WAS FAIR AND EQUITABLE

But the judgment of the Court of Claims was in itself righteous and equitable. The present bill places an unjustifiable restriction upon the Government in the matter of gratuity offsets. It bars the Government from having offsets for moneys received by the Assiniboines from sales of the lands north of the Missouri River or from offsetting the value of any of such lands still undisposed of. It is plain from the facts of the case and the opinion of the court that the Assiniboines received their interest in the lands north of the Missouri River purely as a gratuity from the Government. If this interest had not been gratuitously bestowed upon the Assiniboines, if the moneys received by the Assiniboines under the agreement ratified in the act of May 1, 1888, had not arisen from this gift of an interest in the lands, the Court of Claims would have refused to include them in the total of allowable offsets. If the Government (after the Assiniboines intruded upon the reservation in 1869 and 1870) had appropriated money and given it to them (instead of permitting them to remain on the land and giving them an interest therein), it would not now be contended that the gift of such money was anything else than a gratuity.

The fact that the gratuity took the form of an interest in land rather than money should not operate to prevent the Government from offsetting sums which were subsequently paid the Assiniboines for the surrender of their interest in a part of these lands gratuitously given them. This being the fact, the court's action in including these sums in the allowable offsets under the provisions of the original act (that "the United States shall be allowed credit * * * for any sum or sums heretofore paid or expended for the benefit of said Indians, including gratuities") was correct. Every consideration was given these Indians by the Court of Claims at the time of the former trial. Their claims were thoroughly and carefully examined. After listening to the evidence for many days and weeks the court was compelled to find for the Government.

AMOUNT OF RECOVERY

Even under the amendment proposed stating that the damages be confined to $1.25 per acre less cost of survey there will be injustice. This language will not accomplish the purpose intended. This limitation may be construed to apply solely to lands which have been "unlawfully" appropriated. If the lands were taken in the exercise of the power of eminent domain, as would probably be held by the court, they were not "unlawfully" taken but were taken "lawfully," in which case the court would hold, under the decision of the Supreme Court in a leading case known as the Shoshone case, that the rule of "just compensation" applies, thus permitting the tribe to recover not only the value of the land as of the date taken but interest upon that value to the date of judgment. The application of this principle would make the recovery in interest alone amount to more than three times the principal. The danger of such a result would be considerably lessened if the word "unlawfully" in line 14 of page 4 were stricken and would be completely removed if the proviso suggested by the Attorney General in his report should be added to section 1, as follows:

"*Provided*, That in any claim for the appropriation, expropriation, taking, acquisition, or deprivation of land or any interest therein, the jurisdiction hereinbefore conferred by this act upon the Court of Claims to hear and determine any such claim is limited to the determination of the value of the said land or interest therein at the time of the appropriation, expropriation, taking, acquisition, or deprivation, and that no claim shall be asserted or judgment rendered by the Court of Claims which includes any increment, interest, or an equivalent thereof from the date of the taking to the date of judgment as an element of just compensation or otherwise; and this provision is not severable from any provisions in this act conferring jurisdiction upon the Court of Claims."

The Interior Department also joins in this view. See the letter of the Acting Secretary to the chairman of the Indian Affairs Committee.

TIME LIMITATIONS ON OFFSETS

The Attorney General filed his objections to this bill and we believe that this opinion states many cogent reasons why the bill should not be enacted. On the question of time limitations on offsets he stated the following in which we concur:

"The bill should not limit the items and payments for which the United States is to be allowed credit as offsets. In section 3 it is provided that credit shall be allowed only for sums expended 'subsequent to the date of any Executive order, law, treaty, or agreement under which the claims arise' and prior to March 2, 1927. This is followed by a proviso which would also remove from consideration any sums received by the Assiniboines for surplus lands in the Fort Peck or Fort Belknap Reservations; lands, or the value thereof, within those reservations allotted to the Assiniboines or still held undisposed of; and disbursements made for agency expenses and maintenance. It is quite probable that, prior to an Executive order, law, treaty, or agreement upon which the plaintiff may base its claim, as well as during the past 12 years, the United States has expended for the benefit of the Assiniboines large sums for which credit should be allowed. Lands lying north of the Missouri River, including those in the Fort Peck and Fort Belknap Reservations, should be the subject of set-off, since the Court of Claims has held in the *Assiniboines case* (77 Ct. Cls. 347, 368) that the plaintiff failed to establish title to any of these lands by permanent and continued occupancy and that the permission given to these Indians by the United States to settle thereon was in fact a gratuity. Expenditures made for agency maintenance and similar expenses should certainly be set off. All of these payments, which are enumerated on page 4 of the bill, were for the direct benefit of the Assiniboines and are properly chargeable as gratuities. It was so held in *Blackfeet et al. Nations* v. *United States* (81 Ct. Cls. 101, 137–138), wherein the chargeability of exactly the same type of expenditures was in question. It is therefore recommended that the words 'subsequent to the date of any Executive order, law, treaty, or agreement under which claims arise,' in lines 16 and 17, page 3; and the words 'prior to March 2, 1927,' in line 19, page 3; and the entire proviso extending from line 19, page 3, to line 10, page 4, be stricken from section 3 of the bill."

CONCLUSION

The Interior Department by its Acting Secretary has filed a letter stating that this legislation will likely create a precedent which will be used by other tribes to reopen claims. It also stated that the Director of the Budget has advised that this legislation would not be in accord with the program of the President.

The legislation proposed is dangerous. It will open the Treasury to innumerable future raids. It is an affront to recognized legal and equitable procedure. It will encourage people to continue to try cases over and over again until they themselves win decisions just as they want them. It avoids the equities of the situation because it imposes taxes upon the people of every congressional district to pay unwarranted, improper, and unearned appropriations. It avoids the procedure asked by the Department of Justice and the Attorney General and is inequitable and unjust in every particular. If these people are destitute, if they need supplies or relief, we ought to vote it to them; but we should not do this in the guise of a suit in the Court of Claims.

FRED C. GILCHRIST.
FREDERICK C. SMITH.
FRED BRADLEY.

Let those who take exception to the attitude of Members who endeavor to protect the taxpayers read this minority report.

Why should the attorneys for the Indians be permitted to have their cases reinstated and tried a second and third time after once being disposed of?

Why should Indians be allowed a direct appeal to the United States Supreme Court when no other citizen is granted that privilege?

Why should the Government not be entitled to set off amounts that Government records show were advanced to the Indians?

Anyone who will carefully study the situation that confronts the Government in the Indian claims, in my opinion, will be required to admit that those of us who have opposed the enactment of legislation which Mr. CASE refers to are justified in doing so.

On numerous occasions I have referred to two claims which were recently disposed of not only by the court but by the Congress in appropriating money to pay the claims. Two resolutions were passed amending original jurisdictional acts several years ago. As a result the Government was helpless in presenting its case. The tribes affected were the Klamath and the Shoshone. In the last deficiency bill passed by the Seventy-fifth Congress in 1938 approximately $10,000,000 was appropriated to pay the claims. Within a very short period the attorneys received over $800,000 in fees. With such fees at stake, naturally, lawyers continue to have Members representing Indians introduce jurisdictional resolutions.

If the resolutions now pending become law in their present forms it would be impossible to estimate the amount that it would cost the taxpayers of this country.

If any legislation is to be recommended, the committees certainly should accept the recommendations of the Department of Justice and the General Accounting Office.

What Is Neutrality?

EXTENSION OF REMARKS

OF

HON. J. THORKELSON

OF MONTANA

IN THE HOUSE OF REPRESENTATIVES

Monday, July 10, 1939

Mr. THORKELSON. Mr. Speaker, in the confusion of opinions on neutrality as expressed by Members in the House and in letters which we receive, let us take time out to consider this most vital subject. What is neutrality? It is nothing more than fair play and impartiality when differences arise among individuals, peoples, and states. The best way to remain neutral is to mind our own business.

Neutrality cannot be regulated by law, for it depends upon whether or not we wish to remain neutral. Neutrality is normal. Peace is desirable. War is abnormal.

Neutrality is intimately related to society, and is, as I said, a normal state; so if all of us remain neutral and observe international law, there would be no war. International law consists of rules to which all nations subscribe, but to which only a few adhere. It prescribes the rules which govern war; and if such rules are observed, neutral nations may expect to enjoy peace. The greatest assurance of peace is to be fully prepared to meet any contingency.

If two chaps start to fight on the street in front of your house, you observe neutrality if you stay in the house. You may even be neutral if you stay in your front yard; but when you leave your own domain for the purpose of giving advice or taking sides, you jeopardize your neutrality. Taking sides with either of the combatants is an open declaration of your status. In the end your curiosity may be costly, because both sides may hand you a bill of expense.

Please remember at this point that it was such meddling in the World War that alined us with England and France. All of these nations presented the bill to us and still owe us thirteen or fourteen billion dollars. That was the cost in money for not attending to our own business.

The so-called neutrality acts are directly or indirectly causes for war, and we now find that the papers come boldly out and proclaim to the world that the recent Neutrality Act which passed the House was for no other purpose than to aline the United States with the same powers we helped in the World War.

For us to legislate power to name the aggressor nation will no doubt be looked upon as an unfriendly act by the nation so designated and because of that involve us in war. Under international law the United States may choose its own course, but the President, knowing that operating under international law would leave the responsibility on him, selected instead to use a neutrality law which actually forces his hand to declare what side we will support. This being done by a congressional act leaves all the responsibility on Congress. I say it is a clever piece of legislation that enables the President to be right, win or lose.

Public opinion is often shaped by those who have an ax to grind. Newspaper propaganda controlled by one side often confuses and influences the people. It is therefore highly desirable for the higher-ups to own or control the daily papers. It was such propaganda that was responsible for our taking sides in the World War, and the same propaganda is used today.

If you recall a few months back, the papers were full of anti-Nazi and anti-Fascist propaganda. When no one became excited, all that foolishness stopped. Recently the same papers have attempted to create sentiment in favor of China, not because they are particularly interested in China but for the purpose of building sentiment against Japan. Now the papers are back, headlining their first hate, but I believe the people are wise to this "line of bunk." They are beginning to do their own thinking. They no longer believe the invisible government's expert writers. The many plausible excuses to rekindle antagonisms and hatreds are "no go," for the whole mess is now being exposed and the warmongers cannot find anyone to fight for them. Truth is coming in from Spain—yes; facts unclothed in their real ghastliness of destruction, ravishment, and murder by Stalin's emissaries from Russia, a racial admixture reveling in primitive abandon and drifting back in the gutter to lust and to the jungle of depravity. This characterized the "red" regime in Spain, where the leaders were pawns of the despotic dictator of Russia.

What happened in Spain should be a lesson to the world, for communism and the Communists only understand the rule of destruction. What humanity built in Spain by industrious care and gentle hands during centuries of Christian civilization was destroyed overnight by this "red" horde. Is anything said about it in the kept or communistic press? Of course not; for such information must be censored or deleted, so that our people shall not be informed about the misery which goes hand in hand with communism.

If the international gangsters want to fight, why should they not do a little fighting of their own? They are instrumental in starting our wars, and they use public money to defray the cost. Let them now be crusaders in their own cause of destruction. It would, indeed, be interesting to observe A. Sieff, Melchett, Lindsay, Belisha, Elmhurst, Demitroff, Stakhanoff, Kaganovich, Litvinoff, Rosenberg, Blum, Daladier, Chautemps, Herriot, and their six American cohorts, shoulder guns to fight for the invisible government and the glory of their own "red" cause. It is these internationalists that our boys would be fighting for, should they fight on the side of England, Russia, and France. The World War was fought for the invisible government, and please do not forget that.

Another world conflagration will be fought to restore the same "red" government in the United States that was recently conquered in Spain. This is a picture that some of our Christian representatives, educators, and other dupes of the invisible government should visualize when they beat the tomtoms for the money changers. These pseudo educators and reformers should remember that a fight for the money changers is a fight which destroys all good things in life. Where are we going? Communism is rampant in the Government, colleges, churches, and society. It is publicized and recognized, and condoned, if you please, by even the First Lady herself, as shown at the meeting of the American Youth Congress the other day in New York.

Communism is the order of the day, and in hearings before congressional committees officers of the Army and Navy testified that this vicious doctrine has infiltrated the military service until it is now at the danger point. These gentlemen of the Army and Navy further testified that Communists enlisted in our own armed forces have said that they would not fight for the United States of America. Further evidence appears in the hearings that alien Communists assert that they have a right to murder in order to advance their cause.

With all this evidence before congressional investigational committees, which have full knowledge of communistic activities even in vital places, nothing is done by the Federal Government to stop it. Evidence and proof of communistic activities and of the vicious Communist himself are in the CONGRESSIONAL RECORD, and, remember, if you please, it is communism of the Stalin brand, and not fascism. It is the "red" destroyer in the raw. It is well for those who read this to bear in mind that these statements are not idle wonderings to be stated in the RECORD, but they are actual facts which may be read in the hearings, page by page.

What is the reaction of the kept press? Nothing. It is passed over quietly, and the controlled press advocates greater tolerance and free immigration of the same tribe that is now destroying the Government of the United States. I say, what in the name of heaven is wrong with the Government, and what has happened to our people? If there is any courage left—and I believe there is—let us unite in common effort and demand that Congress stop this deliberate destruction and turn the Government back to the people and upon sound constitutional principles, where it should be.

Five nations in the world are paralyzed by international planners, a most vindictive and inhumane group, with no consideration for anyone but themselves. Their slogan seems to be to rule and destroy. Why should nations not be run by sound constitutional government instead of such planning boards as these: Gosplan, Russia; Pep, England; Economie Dergée, France; and the New Deal in the United States of America. This set-up that is now planning another war in which our own young men will be used to provide greater power for these international planners. What does this mean? It can mean nothing but enslavement to us.

It is difficult to believe that six men in Russia, six in the United States, five in England, and five in France, can rule and enforce their will on the whole world. Such power is incomprehensible to us. I do not believe that they can entice our people into another war, so that they may revenge themselves on such nations as will not submit to their dictatorial rule. It is this type of individual who is connected with the League of Nations, League of Nations Bank for International Settlements, International Agricultural Mortgage Credit Co., and our own Import and Export Bank. It is interesting to see this international interlocking hook-up, for it has wielded a tremendous influence for a long time. It is different now. Many thousands of people know about it, and I do not believe any war fever will be fomented in the United States which will permit the invisible government to use our young people to fight for their cause.

Let us not be mistaken. The subsidized press and the communistic papers let the cat out of the bag, for they state openly and brazenly that the neutrality bill was not a neutrality bill in fact, but a well-prepared device to lead us into war on the side of our allies of 20 years ago. The Members who voted for the Vorys amendment were well aware of that, which is the reason for their support of that amendment. In the Washington Evening Star of July 5, page 11, appeared two articles which in substance infer that the neutrality bill was in reality a stop-Hitler war bill, and that is a clear example of trying to put something over on Congress. Members who wanted real neutrality voted for the arms embargo as a step in that direction. One of the writers sums it up as follows:

> To keep out of war absolute neutrality is essential, and the rules are written in the code of international law, which does not require any act of Congress whatsoever to be announced as America's foreign policy till further notice.

This is a warning to Congress which in substance says: "If the President cannot get a bill enacted which will relieve him of responsibility for war by placing such responsibility upon Congress, he will conform to international law." That is precisely what I have said all the time. Neutrality cannot be regulated by law, for it is only necessary to comply with the international code to remain neutral. It follows, therefore, everyone who complains because the neutrality bill was amended is not neutral in fact or principle but is instead very much partisan.

The question now is, Why did the administration ask for a neutrality act when such desirable state can be had by strictly conforming to international law?

Let us have it right. The Neutrality Act is to aline us with the same powers we helped 22 years ago, to save the world for what we have today; that is, unpaid war debts, closed industries, idle people, poverty, communism, and chaos.

What have the warmongers done to advance civilization, and what have they done to preserve peace? Nothing. They have instead used their power and money to nourish communism and mass executions in Russia, in Spain, and in China. The same powers are now financing communism in the United States, spreading dissension, hatreds, and confusion. They are advocating associations of a demoralizing nature so that patriotism and self-respect may be destroyed. In this attempt to acquire power the "invisible government," through its own agents, engages in un-American activities so that they may rise to power on the ruins of our liberties. This is condoned by our own Government, for, were it not favorable, communism could not prevail for 24 hours. There is sufficient evidence on file in all intelligence departments to evict, eject, and deport all of the alien Communists and their ringleaders in the United States.

I have lived in hope that the light of responsibility would guide Congress in its consideration of the extension of the monetary power and devaluation of the dollar. This power should have been denied to the President, for it is destructive to our own industries. Unfortunately, at the critical moment when this momentous question came up for consideration the light of responsibility failed.

The muddle in which we find ourselves today is to a large extent the result of the Gold Reserve Act. The absolute control of the monetary gold by interests outside of the Treasury and by the governors of the Federal Reserve banks, who now have in their possession over $13,500,000,000 in gold certificates, was delegated by Congress without justification and contrary to the Constitution itself.

Gold, being the property of all the people, inasmuch as it is earned by the common and united effort of all, should remain with the people. When the people are deprived of this right confidence is destroyed in the Government and in those who are to safeguard and protect public interest. We have today in the United States approximately $13,500,000,000, against which interests outside of the Treasury and the governors of the Federal Reserve banks are now holding $13,500,000,000 in gold certificates. These certificates are in reality a priority claim upon the gold, and it should be evident that in such ownership the people are deprived of the use and security of this valuable property. It is for that reason that I have advocated repeal of the Gold Reserve Act, for it is, as I have already said, the actual cause of international turmoil and intrigue now so destructive to world peace.

These thirteen and one-half billion dollars are a potential credit to such powers as the President may designate as nonaggressor powers. To make this plain, let me again say when the President declares the aggressor power, he in reality by such designation alines us with the other side. The question may be asked, How can this credit be used by a foreign power? In reply, I beg to state that the conversion of such credit is a very simple procedure. It is not difficult to secure credit in the United States if such credit is approved by the Secretary of the Treasury, and the neutrality bill provides for just such contingency. This credit may be in the form of ordinary commercial credit, in United States bonds, or even in our own commodity money, for all of it when used by foreign powers is interchangeable for gold credit at the rate of 15.521 grains of fine gold, which is the present standard of the international dollar. We have no business to designate an aggressor, and it is ridiculous for Congress to set the President up as an international umpire, for he has not, if we are to judge him by his past actions, acted as a strictly impartial referee. We have no business to aline ourselves with any foreign power, for having nothing at stake, either in the Occident or Orient, we should not become involved. Let us therefore remain neutral in the true sense of the word, and the formulas for neutrality are set forth clearly and distinctly in international law.

If the President without the sanction of Congress and the expressed will of the people involves the United States in a war, he alone is responsible and must for that reason accept all responsibility. This issue is clear to the people and I

now hope that the President and the State Department will conform to the wishes of the people, for they have clearly indicated that they do not want war.

Mr. Hoover in 1932 and Now

EXTENSION OF REMARKS

OF

HON. JOHN J. COCHRAN

OF MISSOURI

IN THE HOUSE OF REPRESENTATIVES

Monday, July 10, 1939

EDITORIAL FROM THE ST. LOUIS POST-DISPATCH OF JULY 6, 1939

Mr. COCHRAN. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the St. Louis Post-Dispatch of July 6, 1939:

[From the St. Louis Post-Dispatch of July 6, 1939]

THE DAYS OF HOOVER

Herbert Hoover appears again in print to rehearse the errors of the Roosevelt administration. The subject of his latest thesis is war. He charges the President with having taken "a seat at the table where power politics is being played." He thinks the administration's policies are ill-advised, that utterances of administration spokesmen are imprudent, and that, jointly, they are imperiling our peace and bringing "the war threat closer."

Mr. Hoover must be accorded sincerity, of course. If there is a citizen of the United States in a position to speak judiciously and from a serene detachment uninfluenced by partisan bias or personal ambition, Herbert Hoover is, theoretically, that man. Yet the record convicts him, we believe, as a persistent critic of the administration, a professional fault-finder who, having observed the probationary silence ordained by custom, has assailed his successor with malignant zeal. His speeches and papers—a voluminous total—contain not one generous word for the present administration.

That may be politics. It may be sound and orthodox partisan strategy. It is not ex-Presidential deportment. And from the low level of partisan strategy, its efficacy may be doubted. When Mr. Hoover gets up to speak everybody in the audience knows the speech will be an attack upon the administration. Whenever Mr. Hoover's name appears in a table of a magazine's contents every reader knows that the article will be recital of the administration's mistakes. The never-ending refrain of Herbert Hoover, whether as pamphleteer or pulpiteer, is "Roosevelt is wrong."

Now, everybody knows that there isn't a sane man in the United States who wants to drag this country into war. We are all for peace. Differences of opinion honestly exist, of course, as to the policies that will maintain our neutrality. Mr. Hoover is almost uniquely blessed with the absolute knowledge of the one best way to safeguard America from the scourge of war. The road to assured peace, he insists, lies "in economic cooperation with other nations to relieve the economic pressures which are driving the world constantly to instability. * * * We should resume the conferences which were started under such good auspices by our country in 1932."

"Economic cooperation" has an almost ritualistic flavor as pronounced by Mr. Hoover and as originated by President Hoover. But before the desperate hour of international conferences in 1932 the United States declared economic war upon the world in the form of a tariff law which nation after nation earnestly protested. Washington was deaf to those protests. The Hawley-Smoot bill was on the way. Bigger and better subsidies were voted to giant industries which, like Mr. Mellon's Aluminum Co. of America, had been piling up, in Senator BORAH'S accusing judgment, "unconscionable profits."

To the pleadings from foreign lands was added the historic remonstrance of our own American economists, beseeching Mr. Hoover to veto the bill which, they predicted, would expedite and intensify the economic disaster even then darkening our skies. But the sonorous prophecy of Jim Watson vaulted out of the Senate Chamber to assure a troubled people that a month from the day the Hawley-Smoot bill became a law by Herbert Hoover's signature prosperity would be ringing anthems from ocean to ocean and we'd all be singing Happy Days to the tune of Hail, Columbia. Hoover signed it with a panegyric flourish.

The public memory may be short-lived, but it has not forgotten the dark, despondent, defeatist days of Herbert Hoover.

Sale of War Supplies to Japan

EXTENSION OF REMARKS

OF

HON. ED. V. IZAC

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Monday, July 10, 1939

STATEMENT BY HENRY P. CHANDLER

Mr. IZAC. Mr. Speaker, under permission granted me to extend my remarks, I include herein a statement drafted by Mr. Henry P. Chandler, president, Chicago Bar Association, in reference to the invasion of China by Japan and a plea to the Members of Congress to stop the sale of war supplies to Japan, which appeared in the New York Times of May 21, 1939:

An appeal to Congress from 20 leading lawyers of the United States for legislation to stop the sale of war supplies to Japan was made public yesterday by the American Committee for Nonparticipation in Japanese Aggression. The statement, drafted by Henry P. Chandler, president of the Chicago Bar Association, reads as follows:

"We, the undersigned, members of the bar of the United States, condemn the sale of supplies from this country to Japan for use in aggression against China and urge that the Government take effective measures forthwith to stop it.

"The invasion of China by Japan is an exercise of force, pure and simple. It violates treaties to which both the United States and Japan are parties, providing for the territorial integrity of China and denouncing war as an instrument of national policy. As lawyers we support the consistent efforts of the United States for more than half a century to promote the settlement of controversies between nations by methods of reason rather than force and to secure increasing respect for international law. The present course of Japan is diametrically opposed to these aims, and if it succeeds is bound to become an evil precedent. Furthermore, according to reliable observers, the movements of Japan in China are being conducted with deliberate cruelty toward the civilian population, including women and children. Ruthlessness is being made an instrument of military policy.

"To our shame, we must confess that the great wrong to the friendly nation of China is being inflicted largely with essential commodities supplied from the United States. This seems to us indefensible. The least that the American people can do is to refuse for profit to abet an aggressor nation in its designs of aggression.

"For the sake of international law and justice, for the sake of humanity, we call upon the Government of the United States to prevent any further shipment of war materials to Japan. Our complicity in the oppression of China should be ended."

In addition to Mr. Chandler's signature, the statement bore the names of such well known lawyers as William D. Knight, of Rockford, president of the Illinois State Bar Association; R. M. Kelly, of Vicksburg, Miss., president of the Mississippi State Bar Association; Laurence Dumas, Jr., of Birmingham, Ala., Alabama State chairman of the American Bar Association; Joseph B. Cumming, of Augusta, Ga., president of the Georgia Bar Association; Francis M. Hartman, of Tucson, Ariz., president of the State Bar Association of Arizona; Milford Springer, of Washington, D. C., national director of the Junior Bar Association; Fred S. Hutchins, of Winston-Salem, president of the North Carolina Bar Association; Charles P. Megan, of Chicago, member of the board of editors, American Bar Association Journal, and Paul Brosman, of New Orleans, College of Law, Tulane University.

Other lawyers who signed the statement are Robert K. Bell, of Huntsville, Ala.; Maurice P. Davidson, of New York; Ronald J. Foulis, of St. Louis; Walter H. Pollak, of New York; Ralph B. Quillian, of Atlanta; Lester W. Roth, of Los Angeles; Leon Sarpy, of New Orleans; John R. Snively, of Rockford, Ill.; J. D. Thames, of Vicksburg, Miss.; Edgar Bronson Tolman, of Chicago; and Kingsland Van Winkle, of Asheville, N. C.

Imports of Farm Products

EXTENSION OF REMARKS

OF

HON. THOMAS F. FORD

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Monday, July 10, 1939

Mr. THOMAS F. FORD. Mr. Speaker, glancing through the appendix of the CONGRESSIONAL RECORD, as is my habit, I

find on page 327 a statement by the gentleman from California, Representative GEARHART, that shocks me because of its romantic attitude toward the official facts.

The distinguished gentleman from California, with a total lack of respect for statistics other than those supplied by irresponsible opponents of the present administration, quotes figures that purport to represent imports of farm products for the years 1935, 1936, and 1937 by the so-called Raw Materials National Council of Sioux City, Iowa. The distinguished gentleman says:

> But a hasty glance at the import figures for 1935, 1936, and 1937, as compiled by this most efficient business agency, lays bare these startling facts and irresistible conclusions:
>
> First. In 1935 more than 73,000,000 acres of American farm land were displaced by importations of foreign-produced agricultural products. In 1936, the acreage displaced increased to 75,000,000 and by 1937 to more than 87,000,000 acres.
>
> Second. The smallest acreage displacement in any one of the years which I have just mentioned is more than 20 times the area irrigated within Federal reclamation and Indian irrigated projects plus all of the acres provided with supplemental water by Federal irrigation works.
>
> Third. The American value in United States dollars of the farm crops displaced by imported foreign-grown agricultural commodities ranged from $2,656,000,000 in 1935 to $3,410,000,000 in 1937.
>
> Fourth. The cumulative value of all of the crops produced upon Federal reclamation irrigated lands since the inception of the reclamation program in 1902 is almost a billion dollars less than the American value of the highly competitive, foreign-grown, and imported agricultural commodities for the year of 1937 alone.

The gentleman from California [Mr. GEARHART] bases his statement upon a tabulation credited to the research division of the Raw Materials National Council of Sioux City, Iowa, the responsibility of which organization no one to my knowledge has vouched. The tabulation contains figures for imports during 1935, 1936, and 1937 of 32 products or product groups which it designates as agricultural and 7 product groups which it designates as nonagricultural. For these items, it shows the quantity of imports, the foreign value in dollars, the "United States displacement" in dollars, and the number of "United States acres to produce."

On the basis of this tabulation the gentleman from California [Mr. GEARHART] states or implies two principal conclusions: First, that the totals shown in the table as "United States acres to produce"—73,000,000 acres in 1935, 75,000,000 in 1936, and 87,000,000 in 1937—represent United States "acres which might have been planted" in those years had the imports in question been kept out; and, second, that the commodities in the table entered the United States in large quantities during the years shown because our high tariffs on these products had been lowered.

A study of the situation reveals (a) that the table contains many errors of fact, most of which are such as to exaggerate the import figures, and (b) that the conclusions drawn by the gentleman from California [Mr. GEARHART] are entirely erroneous.

A few of the major errors in the table are as follows:

(1) The table includes as agricultural such items as shoes, gloves, chemicals, and cotton manufactures, in which the interest of American farmers is exclusively that of consumers. The industrial tariffs on these products tend to increase the prices farmers must pay for the things they buy and by decreasing the foreign supply of dollars to decrease the prices farmers obtain for the products they sell. These products have never been classified as agricultural in serious analyses of our foreign trade. Their ommission would greatly decrease the totals shown in the tabulation.

(2) The so-called United States displacement by the commodities in the table appears to have been arrived at by tripling the official import values. Presumably this was done because import values are taken from invoices and do not, therefore, include freight costs and duty charges. There is no single factor which can be applied to the value of all imports in order to arrive at their United States valuation. If such a factor could be computed, it would certainly be much lower than 3. Even for a product where a tariff of 100 percent—much higher than the average—is fully effective in raising United States prices, the factor to use in arriving at the United States valuation would be only a very small fraction above 2. In the case of some products, such as dyes—included with chemicals—the figures shown as "foreign values" are actually United States values and should not have been raised at all. For most products, the correct factor to apply in determining United States values would be considerably less than 2, and only rarely could it reach the figure 3, which is applied to all products in Mr. GEARHART's tabulation.

(3) Figures shown in the table for several commodity groups are arbitrarily large. Thus the quantity of hay shown is exactly 1,000 times the amount actually imported. In the case of condensed and dried milk the table carries the figure $1,113,700 for each year, explaining that this is the 1935 figure being carried as an average. The true 1935 value of imports of condensed and dried milk was $218,000, about one-fifth of the figure in the table.

Other errors may be observed by comparing the data in the attached corrected table of certain agricultural imports with those shown in Mr. GEARHART's table. The corrected table also brings out the fact that imports of most of the products in question were greatly reduced in 1938 and, in some cases, were higher on the average during the 5 years 1926–30 than during any single year included in Mr. GEARHART's table.

But even if the figures relied upon by the gentleman from California [Mr. GEARHART] were correct, the general conclusions he draws with regard to the relation of agricultural imports to our farm situation would not be correct.

First, with regard to the conclusion that the commodities in the table entered the United States in large quantities during 1935, 1936, and 1937 because our tariffs had been lowered, it need only be pointed out that the great majority of these imports paid the full rates of duty provided for them in the Tariff Act of 1930. The largest agricultural item upon which United States duties have been reduced under the reciprocal trade agreements program is sugar. The sugar-duty reduction was associated with a quota on imports, and the quantities entered during the 3 years shown in the table of the gentleman from California [Mr. GEARHART] were from a quarter to a third less than the average for the 5 years, 1926–30. As for the commodities other than sugar, it is only necessary to point out that less than 7 percent of the increase in all supplementary United States agricultural imports other than sugar between 1932 and 1937 occurred in products upon which duties had been reduced by the reciprocal-trade agreements. Furthermore, not all of even this small proportion of the increase was due to the duty reductions, as is evident from the fact that much of it disappeared during the general fall in imports which took place during 1938.

Perhaps the most fundamental error in Mr. GEARHART's statement, however, is connected with the concept of "displacement." By and large, imports do not "displace" United States farm products. Certainly they do not represent United States acres which might have been planted had they been kept out. Agricultural imports of types which supplement United States farm production may be divided into two general groups. The first group, ordinarily by far the larger, includes such products as sugar, hides and skins, tobacco, and wool, of which we are unable in the United States to produce either sufficient quantities or the necessary varieties to satisfy domestic requirements. The second group includes such things as corn, wheat, cured pork, and a number of other commodities, of which we ordinarily produce more than enough to supply domestic requirements and which are not imported to any significant extent except in years of domestic shortage due to crop failures. Even in such years, imports of these commodities amount to only a

small fraction of the shortage and are rarely, if ever, an appreciable percentage of total domestic production. Upon reflection it becomes apparent that each of these types of imports is of vital importance to the economic welfare of the United States and that neither of them may be properly said to "displace" domestic farm production. Without the first group, the standard of living of the American people would be greatly reduced, and there would be little or no corresponding benefit to American producers. Without the second group, occasional shortages of food and feedstuffs due to drought or other causes of crop failure would be greatly accentuated. Furthermore, producers would be no better off than they are at present, since it would be impossible for them to increase production until the next producing season, when the crop shortage would usually be changed into a surplus and imports of this group of products reduced to a mere trickle.

Imports of the first group tend to be high during periods of a high general level of economic activity in the United States and tend to be low during a depression. Imports of the second group vary inversely with domestic production of the crops in question. The 3 years included in Mr. GEARHART's table were marked by a relatively high level of domestic economic activity and a great shortage in domestic supplies due to drought. Hence, imports of both groups were at exceptionally high levels. They have been at relatively low levels during 1938.

There is another aspect of the question of the "displacement" of American acres by imports which it is important to remember in this connection. United States agriculture as a whole is on an export basis. It has been estimated that fifty to sixty million acres were used to produce our export crops during the period just preceding the great depression, while the exclusion of all supplementary agricultural imports could have given employment to less than 10,000,000 acres. The attempt to exclude supplementary imports would tend to decrease our farm exports both because it would decrease the supply of dollar-purchasing power made available to foreigners and because it would lead to reprisals by foreign countries against our own export products. We would stand to lose more acreage due to decreased exports than we would gain due to decreased imports.

United States: Imports for consumption of specified agricultural commodities, average 1926–30 and annual 1935–38

[1] General imports except as otherwise noted.
[2] Includes a small amount of "meats canned, other than beef."
[3] Average for years 1928–30.
[4] Reported in value only.
[5] Beginning 1936, excludes the weight of "other hides and skins" which are reported in pieces only.
[6] Includes a small amount of reptile and fish skins.
[7] Imports for consumption.
[8] Less than 500.
[9] Average for 1929 and 1930.
[10] If any, included in "other edible oils."

Compiled from Statistical Abstract of the United States, 1937, and official records of the Bureau of Foreign and Domestic Commerce.

I am sure that if the distinguished gentleman had gone to official sources for his information that he would not have permitted his wholly unrealistic statement to appear in the RECORD.

I say unrealistic statement for the purpose of charity. My distinguished friend should have known better but partisan zeal often blinds one to the facts. My friend is a victim of totally false information.

Republicans Make Merry in Denouncing Democratic Spending Policies

EXTENSION OF REMARKS

OF

HON. JOHN M. COFFEE

OF WASHINGTON

IN THE HOUSE OF REPRESENTATIVES

Thursday, July 6, 1939

EDITORIAL BY JOHN McGIVNEY

Mr. COFFEE of Washington. Mr. Speaker, under leave to extend my own remarks in the RECORD, I include herein a challenging editorial from the pen of John McGivney, editor of the Tacoma Labor Advocate, official organ of the Tacoma Central Labor Council. This editorial appeared in the issue of June 16 of the Tacoma Labor Advocate. Its sentiments devastatingly blast the cynical jeremiads of the Republicans with respect to governmental spending. I commend its reading to all who might be inclined to be deluded by Republican propaganda.

The editorial is as follows:

[From the Tacoma Labor Advocate]

NATIONAL DEBT WEEK

You may not have known it, and certainly few indicated that they cared a continental, but the high moguls of the Grand Old Party last week celebrated National Debt Week.

It was quite a stroke of political acumen. The general idea is that nothing so terrifies folk in an insecure world as that word "debt" and to depict the Nation tottering into an abyss because of the accumulating national debt was calculated, the wisenheimers of the G. O. P. believed, to just give the Nation the jitters.

They believed, no doubt, that the public would not know what it was all about, and that it was something terrible could easily be shown by just a summing up of the bills that Uncle Sam owes. But the week came and went without any national shock to the country's nerves; and if ever there was a dud, alas, here was one for all to see.

The newspapers did their bit. You can give them credit for that; but it would appear that, like Macbeth, the people have supped with financial horrors of the kind for so long that they are quite indifferent. And there's the rub. While most of the big wigs in the realm of finance, industry, and commerce have been of late doing very well, thank you, there was a time when that was not so. Indeed, it is the recollection of that which makes the people altogether hesitant that they should swap the New Deal for the old deal, although you dress the latter in good old American flags and give it a monopoly on Americanism.

You see that halcyon period from 1923 to 1929 has not been quite buried in the obscurity that the leaders of the G. O. P. would fondly hope. And if debt discussions are to be in order the public naturally has a few questions to ask, because there are debts and debts.

In that illustrious period when top capital cavorted high, wide, and handsome, the great corporations of America were borrowing the colossal sum of $123,000,000,000. And of this enormous sum quite a large portion never has been paid, never can be paid, and so never will be paid. These nonpayments were registered in insolvent banks, railroads, power corporations. They were materialized in ruined lives, broken homes, lost fortunes, and the social debris built a monument to business incapacity which will not collapse for some time.

Let us take a forgotten incident in the career of a forgotten man. We refer to Mr. Sam Insull, exploiter in chief of investors—men and women, widows and orphans. Well, last week, delicately synchronized to time with National Debt Week, 14,700 investors were paid back a total of $1,670,933 of the fifty millions they had subscribed to the Insull Utility Investments before it went bankrupt. To date, then, they received exactly 7 cents on the dollar and the liquidation of the I. U. I. is only one among many thousands of other losses and its millions just a drop in the many billions that are gone with the wind.

It's hard, somehow, to understand the make-up of any politician that designs a debt week and concentrates his attention on the national debt of the only nation in this wide world the financial position of which is as sound as a dollar. And as every debt must be considered in relation to the status of the debtor, you can see for yourself what the critics of this administration think of it, the way they scramble over their feet to grab any issue of the United States Government that the Treasury may open for bids.

This criticism of the administration's fiscal policies is one of the most impudent hypocrisies of the age. For National Debt Week, like lack of confidence and deterrent taxation, is only just another of many alibis to explain the impotence of private enterprise to stand on its feet again.

The tremendous reserves in banks and savings institutions is proof enough that taxation is not excessive. The extraordinary number of willing workers seeking employment, while plants are idle and this money remains in control of financiers, proves that incapacity for initiative and leadership which is the bane of our price and profit system.

So when the Government steps in with lending-spending programs and provides food, clothing, and shelter even in a minimum degree, those who themselves can do nothing maintain a united front against such spending and declare that the Nation is on the high road to insolvency!

The position is so absurd it seems as if these men who control the financial and industrial destinies of the country act as if they lived in an age when mechanical technique, assembly lines, and such vastly increased productivity didn't exist at all, and view things as if they had remained unchanged during all the years.

Even Bernarr MacFadden should know more than that.

American Neutrality

EXTENSION OF REMARKS
OF
HON. JOHN M. VORYS
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Monday, July 10, 1939

RADIO ADDRESS BY HON. JOHN M. VORYS, OF OHIO, JULY 9, 1939

Mr. VORYS of Ohio. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following address delivered by me over a coast-to-coast network of the Columbia Broadcasting System on July 9, 1939:

I want to tell you tonight where we are on American neutrality. Abraham Lincoln said, "If we could first know where we are and whither we are tending, we could better judge what to do and how to do it." I am going to try and tell you where we are on neutrality, as accurately and realistically as I can, because so many people who are discussing neutrality, including many editors and columnists, apparently don't know where we are. Their comments on the Bloom bill as it passed the House sound as if they haven't read the bill and don't know the present law.

The Bloom bill that passed the House is entirely different from the Bloom bill that was introduced in the House. Eleven important amendments were adopted, five in committee and six on the floor. Ten were drafted by Republicans, and adopted by Republicans and Democrats. I sponsored four amendments, Congressman BRUCE BARTON, of New York, three, and Mr. BLOOM himself offered the amendment striking out the controversial provision for designating combat areas. The Vorys arms embargo amendment was adopted by the votes of Republicans and Democrats and opposed by Republicans and Democrats. Here is what the Bloom bill now pending in the Senate provides, as compared with the present law:

(1) During a foreign war, whenever either the President or Congress finds that it is necessary, a neutrality proclamation is issued. The present law requires the President to issue a proclamation whenever a state of war exists, although he has ignored this requirement.

(2) Under the pending bill, it is unlawful to export arms or ammunition from the United States to any belligerent. This is the Vorys amendment. The present law forbids not only arms and ammunition but implements of war, whatever they are, and also forbids shipping to neutral countries for transshipment to belligerents.

(3) Under the pending bill, no citizen can travel on a belligerent vessel except at his own risk. In the present law, travel on belligerent vessels is absolutely forbidden.

(4) Under the pending bill, it is unlawful to buy or sell the bonds or securities of a belligerent government in this country or to make loans to a belligerent, except 90-day loans approved by the President, or to ship articles or materials to belligerents until all right, title, and interest therein have been transferred to a belligerent. These provisions are substantially the same as in the misnamed cash-and-carry law which expired May 1. Will editors and columnists who have been writing about "cash and carry" and "come and get it" please note that there is no cash-and-carry requirement in the Bloom bill? Only those belligerents who cannot secure an exception from the President have to pay cash, and there is no provision at all for "carry."

(5) The pending bill forbids solicitation and collection of funds by belligerents. The same provision is in the present law.

(6) The pending bill exempts American republics from the foregoing, and a similar exemption is contained in the present law.

(7) The pending bill permits the President, when ships leaving our ports are suspected of supplying belligerents in violation of law, to require bond of the shipowners guaranteeing that the law will not be violated. A more drastic similar provision was contained in the present law up to May 1.

(8) The pending bill forbids the use of our ports by belligerent submarines or armed merchant vessels in exactly the same terms as are contained in the present law.

(9) The pending bill continues the National Munition Control Board, which is provided by the present law, but in the Bloom bill, provision is made for more publicity concerning shipment of arms.

(10) The pending bill provides penalties for violations of $1,000 or 5 years or both. The present law provides for penalties of $10,000 or 5 years or both.

This is what the Bloom bill does and doesn't do. It is far from perfect, but it's far from a meaningless hodge-podge. It will not guarantee peace or neutrality for our country. No law can. No law can limit the constitutional powers of the President as to foreign affairs. No law of Congress can have any binding effect on foreign nations, but solely on our citizens. What we do in a so-called neutrality bill is to pass laws forbidding American citizens from doing things that experience has shown tends to get us into war. The pending bill doesn't tie the hands of the President. It ties the hands of munition makers and of American citizens who want to finance foreign wars, raise money for foreign wars, and do other things that tend to get us into trouble.

Since 1818 we have had various kinds of such neutrality laws. We still have in full force and effect neutrality laws, including arms embargoes, that were enacted in 1909, 1917, 1922, and 1930, as well as the act of 1937. No one is claiming that these laws which we have had for decades tie the hands of our President or tie the hands of anybody else except international troublemakers. Even those who advocate going back to international law, which in this day and age means relying on international lawlessness, have not suggested that we repeal these time-tested limitations upon the rights of American citizens to get us into trouble.

Of course, we can't guarantee peace merely by passing laws, but it's just as silly to claim that we can guarantee peace by repealing laws merely because they don't guarantee peace. It would be just as silly to advocate repeal of our laws against murder merely because they don't guarantee to prevent all murders.

The fight on the pending bill will now center on the Vorys amendment, which provides an arms embargo. This amendment would embargo anything that is designed solely for offense or defense in war—lethal weapons—and would not cover any other articles or materials, even though they could be changed into arms or ammunition by a belligerent, or were used both for peace and war, such as trucks, commercial airplanes, sandbags, food.

The interventionists say there is no difference between the selling of arms to belligerents and selling anything else they may need. That is because they think of neutrality in terms of helping or hurting some other nation and not in terms of protecting ourselves. Everyone recognizes the distinction in law and in morals between the sale of whisky by a saloonkeeper and the sale of a load of corn by a farmer, even though whisky can be made from corn. A similar distinction exists between selling arms which can only be used for war and selling other things. The interventionists feel that we should arm the victims of aggressors. I feel that we should stop arming aggressors, as we are doing in the Orient. The interventionists say that an arms embargo is unneutral. On the contrary, we are not required under international law to ship arms, which Mr. Hull admits are "absolute contraband," to any nation. The arms embargo merely prevents the shipment of "absolute contraband," which is subject to seizure by any belligerent under international law. Every international law expert admits that the airplane and the submarine have completely changed the law of search and seizure, because you cannot search and seize a surface vessel from the air or from under water. If a belligerent knows it is a neutral vessel, not carrying arms but a peaceful cargo, he will hesitate to molest it and offend a neutral. If, on the other hand, it is known to be laden with arms, "cooperating with similarly minded governments," to use the President's term, the belligerent will sink it, for he will know he has nothing to lose; he will not be offending a real neutral and will be sinking "absolute contraband" under international law.

Our policy, under the pending bill, as amended, would be to forego this arms traffic in means of murder, and then to assert our rights as neutrals to freedom of the seas for peaceful commerce. If other nations go to war we will furnish them the supplies of peace. We will let them distort their economy into a wartime economy. We will furnish the sewing machines and let them furnish their own machine guns.

It is now claimed that our munitions industry needs the stimulus of a foreign war boom for our national defense. That sort of boom was described by President Roosevelt in 1936 when he said:

"If war should break out again in another continent, let us not blink the fact that we would find in this country thousands of Americans who, seeking immediate riches—fool's gold—would attempt to break down or evade our neutrality. * * * To resist the clamor of that greed, if war should come, would require the unswerving support of all Americans who love peace. If we face the choice of profits or peace, the Nation will answer—must answer—'We choose peace.'"

Those are the words of our President in 1936. What has caused him to change his mind now and insist upon a war boom for the American munitions makers? We are now told that the purpose of this proposed war boom is to preserve peace. That by arming one set of powers in Europe we can preserve the balance of power in Europe. That by intervening we can keep out. That the mere threat that we'll help will stop any war from starting and thus preserve world peace.

There are two criticisms of this policy. First, we have no assurance that the threat of our force will be sufficient to stop war in Europe, and no one can give us that assurance. Second, if the bluff does not work we will inevitably go into the war. When an international incident takes place on the strength of our promise to one side or threat to the other, the pressure to make good our bluff, to back up our commitment, will be irresistible.

The President has no more intention of taking us into war than he had 6 years ago of taking us into debt; but we have learned that despite good intentions, if you spend enough you get into debt, and if you bluff enough you get into war.

Opposed to this policy is our traditional American belief that the way to peace is not to promise or threaten to fight anybody or to

help fight anybody. We cannot decide what other nations will do or should do, but no matter what they do we are not going over to the next war. We cannot guarantee peace to the world, but we have a duty toward world peace, and that duty is to stay out of war and war economy and war psychology so that when other nations are exhausted either by war or by frenzied preparation for war and are ready to try to restore international peace and order and justice we can then join them as the strong and neutral and friendly big brother of them all, and not the weakened and biased and hateful partner of one side.

This is a policy not of intervention nor of isolation, but of independence; it is the policy of Washington and Jefferson. It cannot be guaranteed by law, for in our foreign affairs Congress cannot tie the hands or close the lips of the Executive. Congress can, however, tie the hands of munition makers and carry out this American idea and ideal—that we won't help kill people in other people's wars because we want to be neutral and friendly and peaceful—and independent.

The Oslo Conference of the Interparliamentary Union

EXTENSION OF REMARKS

OF

HON. HAMILTON FISH

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Monday, July 10, 1939

Mr. FISH. Mr. Speaker, the Thirty-fifth Conference of the Interparliamentary Union will be held at Oslo, Norway, beginning August 15. Due to the world situation this conference will be one of the most important ever held and to which practically all nations are expected to send delegates.

As president of the American group of the Interparliamentary Union and with the approval of the executive committee, I appointed an advisory committee of 28 prominent Americans, as follows: Col. William Hayward, chairman; Bernard M. Baruch, Miss Mabel T. Boardman, Lucius Boomer, Mme. Julia Cantacuzene, Hon. Bainbridge Colby, Hon. John W. Davis, Hon. Charles G. Dawes, John Foster Dulles, Hon. Henry P. Fletcher, John M. Franklin, William Green, Hon. Herbert Hoover, Julius C. Holmes, Hon. Patrick J. Hurley, Hon. Fiorella H. LaGuardia, John J. Lewis, Allan Nevins, John J. O'Connor, Hon. Frank L. Polk, Capt. T. Rieber, Dr. Emmett J. Scott, Hon. Alfred E. Smith, Hon. Bertrand H. Snell, L. J. Taber, Hon. Grover Whalen, Rabbi Stephen S. Wise, and Owen D. Young.

A questionnaire is being sent to each member of the advisory committee to ascertain their views on important issues that will be discussed at the conference, such as: (1) World peace and neutrality; (2) ethnic, colonial, and refugee problems; (3) overpopulation, foodstuffs, and raw materials; (4) the calling of a new Hague Conference; (5) advisability of inviting the Interparliamentary Union to hold its conference next year in the United States, possibly in connection with the world's fair at New York; (6) promotion of peace by arbitration, judicial settlement, and international law; (7) outlawing bombing of defenseless cities and safeguarding food ships; (8) reduction and limitation of armaments; (9) economic and financial questions; (10) social and humanitarian questions; (11) intellectual cooperation; and (12) promotion of representative and parliamentary forms of government.

The United States is entitled to 28 votes at the conference. As president of the American group, I expect to appoint the delegates from the House and Senate within the next 10 days.

Mr. George Djamgaroff, of New York, has been appointed public relations counsel for the American group.

Emergency Committee for Preserving the Fair Labor Standards Act

EXTENSION OF REMARKS

OF

HON. LEE E. GEYER

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Monday, July 10, 1939

Mr. GEYER of California. Mr. Speaker, I ask unanimous consent to have printed in the RECORD a statement of purpose of the Emergency Committee for Preserving the Fair Labor Standards Act. As will be observed from the list of members of this committee, leaders of many of the outstanding nonpartisan organizations of the country are rallying to the defense of the popular wage and hour law, as the Fair Labor Standards Act is commonly known. This committee is particularly significant in that it contains representatives of religious, consumer, citizens, and trade-union groups. There are representatives of the Catholic, Protestant, and Jewish religions on it, and these individuals command a wide following among the church-going people of the United States.

The organized consumers of the Nation are represented by such groups as the National League of Women Shoppers, National Women's Trade Union League, and the American Association for Economic Freedom. Trade unions in the American Federation of Labor, the Congress of Industrial Organizations, and the Railway Brotherhoods are, of course, represented on the emergency committee. Lastly, the committee has among its members representatives of various citizens' organizations, such as the Washington Commonwealth Federation, Labor's Non-Partisan League, the National Negro Congress, and the American League for Peace and Democracy.

The conclusion which comes to my mind when I summarize the membership of this committee in this way is that here we have an authentic representation of many diverse elements of the public. In other words, this appeals to me as evidence of a spontaneous reaction of the people in this democracy when they discovered a conspiracy to deprive them of the hard-won wage and hour law. I believe, Mr. Speaker, that the time has come when the American people are going to dispose, once and for all, of the attempts of the narrow group of reactionaries to destroy this act. We have seen in recent weeks a clever lobby working in close cooperation with those elements of this House who are trying to emasculate the New Deal program. The statement of purpose of this committee quite clearly points out that the old enemies of the Wage and Hour Act are determined to ruin it by amendment or smear it by investigation before it has had the beginning of an opportunity to demonstrate its value. It is clear to all of us, I think, that by the so-called clarifying amendments the antilabor interests are merely seeking to exclude the laborers in the most viciously sweated industries and to destroy the foundations of the Wage and Hour Act. Knowing that they cannot accomplish their purpose openly these interests are taking the devious method of knifing the act by amendments.

Mr. Speaker, I submit that the Emergency Committee for Preserving the Fair Labor Standards Act speaks for a wave of public opinion which will soon look like a tidal wave that will sweep away the proposed emasculating amendments. I am informed that the emergency committee has sent a copy of this statement of purpose to every Member of the House of Representatives with the request that each Member of this House advise the committee of the extent to which he subscribes to the principles embodied in the statement of

purpose. I urge respectfully that every Member of this House should place himself on record with this committee as being a defender of the wage and hour law in its present form. The principles to which I urge you to subscribe are in the following statement of purpose:

[The Emergency Committee for Preserving the Fair Labor Standards Act, Nina P. Collier, secretary, Washington, D. C.]

STATEMENT OF PURPOSE

This committee, representing church groups, consumer groups, labor organizations, and other public-spirited groups and organizations, has come into being to help organize effective resistance to a concerted attempt of the original enemies of the Fair Labor Standards Act to destroy the act, under pretense of intention to improve and strengthen it.

Recent developments and current legislative maneuvers leave no room for doubt that the old enemies of the Wages and Hours Act are determined, if at all possible, to scuttle this act, and ruin it by amendment or investigation before it has had even the beginning of an opportunity to prove its practicability and its economic worth.

The same powerful lobbyists who continuously fought the bill before its enactment into law last year are now seeking to make new alliances and obtain support in attempting, under the guise of "clarifying" amendments, to exclude members of sweated industries, and to destroy the very foundations of the act.

The Administrator of the Fair Labor Standards Act has publicly stated: "It is now clear that the high-priced lobbyists are not going to let any clarifying amendments go through the Congress unless these amendments carry along with them the emasculating exemptions which they seek for the special groups they represent."

The Secretary of Agriculture has also pointed out the harmful character of the amendments advocated by representatives of the large agricultural processors and industrial employers.

This emergency committee, in view of the present legislative situation, is unqualifiedly opposed to the consideration of any amendment to this act in this session of Congress.

These same groups have also proposed a resolution for a special investigation of the Wages and Hours Administration, intending by that device to force a reopening of the act, to create an opportunity to undo this legislation, which was won last year only after years of struggle.

All available forces for the support of this law must be reorganized for its defense now. It may require as much force to defend the act as it required last year to pass it.

The victory achieved last year is lost unless this law is effectively protected now. This committee, in taking this stand, believes that it represents the true sentiment of the vast majority of the voting population of the country.

Nina P. Collier, National League of Women Shoppers, secretary; Father R. A. McGowan, National Catholic Welfare Conference; Bishop Francis J. McConnell; Rabbi Barnett Brinckner; Elizabeth Christman, National Women's Trade Union League; W. D. Johnson, Railway Labor Executives Association; Gardner Jackson, Labor's Non-Partisan League; James McNamara, Hotel and Restaurant Employees International Alliance (A. F. of L.); Donald Henderson, United Cannery, Agricultural, Packing, and Allied Workers (C. I. O.); Charles H. Chase, American Association for Economic Freedom; Daniel Driesen, American Communications Association (C. I. O.); John P. Davis, National Negro Congress; Marion Bachrach, Washington Commonwealth Federation; Mildred Riemer, American League for Peace and Democracy; Leo Goodman, United Shoe Workers of America (C. I. O.); John J. Abt, Wage-Hour Bureau, Amalgamated Clothing Workers.

John Ericsson Memorial

EXTENSION OF REMARKS

OF

HON. FRANK CARLSON

OF KANSAS

IN THE HOUSE OF REPRESENTATIVES

Monday, July 10, 1939

ADDRESSES BY HON. GUSTAV MOLLER, MINISTER OF COMMERCE OF SWEDEN, AND HON. FRANK CARLSON, OF KANSAS

Mr. CARLSON. Mr. Speaker, under leave to extend my remarks in the RECORD, I want to include the addresses given by Hon. Gustav Moller, Minister of Commerce, of Sweden, and myself, at the dedication of the John Ericsson room in the American Swedish Historical Museum in Philadelphia on June 24, 1939.

The American Swedish Museum at Philadelphia contains a large collection of paintings, relics, books, replicas of machine models, and other items connected with the progress of Swedish-American history in this country. At this same meeting the placques presented by the States of California, Illinois, Iowa, Massachusetts, Minnesota, Washington, New Jersey, and the Territory of Alaska were made a part of this museum.

The following address was given by the Honorable Gustav Moller, who has served his country with honor and distinction for many years as a member of the Swedish Parliament. He is the father of social-security legislation, and at present is minister of commerce.

Mr. Chairman, ladies, and gentlemen, in joining with you in celebrating the one hundredth anniversary of the arrival of John Ericsson in America, and in participating with you in the dedication of a room set aside in his honor in this beautiful building, permit me first and foremost to convey to the American Swedish Historical Foundation and to its many friends and supporters the heartiest greeting from the people of Sweden and from the Swedish Government on this very auspicious occasion. On behalf of my government I wish also to thank you for all the unselfish work you have performed with a view to keeping alive the memory of Swedish contributions to America's life and development.

We, at home in Sweden, cannot sufficiently appreciate the importance of your labors and endeavors, without which the Swedish name would not enjoy the excellent acclaim that it apparently now evokes in America.

John Ericsson is now regarded by the land of his birth as one of its foremost inventive geniuses—a place of honor which by no means was ungrudgingly accorded him during his lifetime—and let me assure you that your act of honoring him by means of dedicating in this museum a special room in his memory will strike in all Sweden a note of grateful appreciation.

John Ericsson's untiring labors during your Civil War contributed to some extent toward the preservation of your marvelous country, and if he had done nothing more of importance than construct the famous *Monitor* his name would still have gone down in history as a famous man. For, as a matter of fact, democracies throughout the world were strengthened morally in the knowledge that one of the most important of them—important in size, power, and influence—did not collapse, although assailed on all sides during 4 long years of strife and danger.

It is pleasing to recall at this moment that Sweden for 125 years has not been at war with any country—and may I be so bold as to suggest that because of this fact, and because of the further fact that Sweden's relations with your country have always been peaceful, that my country has well earned the right to be regarded by your country as a trusted friend.

It is my fervent hope that Sweden and the United States of America, in friendly and helpful intercourse, will keep aloft the torch of democratic freedom and liberty.

Following Mr. Moller's address, I delivered the following address:

Mr. Chairman, honored guests, ladies, and gentlemen, I want to assure you that I regard it a distinct honor and pleasure to have the privilege of attending this dedicatory service. My only regret is that you were not privileged to have as one of your speakers the distinguished and honored Senator from Minnesota, Senator ERNEST LUNDEEN. I am here, trying in my humble way, to render the service he would have performed with great honor and credit.

No one can question my intense and sincere interest in a meeting of representative Swedish Americans. Ostergotland and Vermeland are provinces of Old Svea that mean much to me. My father and mother immigrated from those provinces in 1883. Heeding the call of that day they went westward with a great group of immigrants, crossing the Allegheny Mountains. They settled in Concordia, a small country town in Kansas. Time does not permit or I would mention some of their early trials and tribulations, because they were typical of the trials and tribulations the Swedish pioneers went through. I only want to mention in passing that they had a firm and unbounding faith in the future of the United States of America. With this firm faith they built on the three great pillars that have made this Nation, namely, the home, the school, and the church. If our Nation is to continue, as I believe our God and Creator wants it to continue, we of this generation must protect and preserve these institutions. They are the foundation stones of our democracy. In these troublesome times of domestic economic problems and the delicate international situation, it is well for us as Swedish

Americans to pause for a moment and look back upon the lives of those sturdy pioneers of Scandinavian descent. Ours is a great heritage and we of this generation are greatly indebted to our forefathers. More than that, our Nation is indebted to this great group of early Swedish pioneers.

Mr. Chairman, it is an honor to dedicate the placques that were presented by the Swedish American citizens of California, Illinois, Iowa, Massachusetts, Minnesota, Washington, and the Territory of Alaska. These placques were presented as an evidence of brotherly love and good will to the Swedish Tercentenary last year. It is most fitting that as we dedicate or set apart these placques that we pause in gratitude and retrospect. Samuel, the prophet of old, erected a milestone in the progress of his nation's history. As he dedicated it, he stated, "I am going to call it Ebenezer because hitherto hath the Lord helped us." Therefore, this afternoon it can be truly said of the early Swedish settlers and their descendants "Hitherto hath the Lord helped us."

It is not necessary for me to review the history of the Swedish pioneers in Delaware, Pennsylvania, New Jersey, and Maryland. Theirs is a record of progress and achievement. John Morton, John Hanson, and John Ericsson are Swedish names that have helped change our history and our Government. Pioneers they were—courageous, noble, industrious, and faithful to God and country. History, my friends, has a way of constantly repeating itself. The problems and evils, socially and politically, that confront one generation have a way of arising in future generations, perhaps in differing forms, but none the less baffling and menacing to the social order and security of our political institutions.

During recent years our beloved country has been confronted with conditions and problems that have caused the stoutest hearts among us to quail and to wonder if under this strain our social order and institutions would survive. In a way they are as serious and as menacing as were the issues of the Revolutionary and Civil Wars. Someone has said that this Nation of ours can never be destroyed from without, but that we must always be on the alert for the enemies within. The darkest period in the history of our Nation was that period from 1861 to 1865 when we were fighting among ourselves. The Swedish people have always stood for religious tolerance and policies of peace and fair dealing and have a respect for minority groups. I am positive everyone of us has viewed with alarm the class hatred that seems to be developing in the Nations of the World. Every effort must be made by all true, liberty loving American citizens to see that this class hatred and class feeling will not be allowed to get a foothold on American soil.

Mr. Chairman, on behalf of the States which have presented these placques, I dedicate them as marks of progress and a signal light for future generations.

Neutrality

EXTENSION OF REMARKS
OF
HON. JOHN W. GWYNNE
OF IOWA
IN THE HOUSE OF REPRESENTATIVES

Thursday, June 29, 1939

Mr. GWYNNE. Mr. Speaker, the consideration of the Bloom bill has given the country an excellent opportunity for an examination of our entire foreign policy. For it should be borne in mind that we are not simply debating the details of a bill to keep America out of war. We are, in fact, deciding whether we shall be neutral or unneutral in future contests among foreign nations. In spite of all efforts to camouflage it, that is the real issue before the American people.

In deciding this issue, we should not be influenced by immediate affairs in Europe or Asia. Nor should our judgment be swayed by the prejudices which many of us have toward one side or the other in any present conflict. When the policy of neutrality and aloofness from foreign affairs was first announced in Washington's administration, it was in times similar to these. Then a great conflict was actually raging in Europe. The easiest course would have been to lend support to our former ally—as was being demanded by many of our people. The fact that Washington and Jefferson and the other leaders of that period were able to look beyond the immediate day is a splendid tribute to the sound statesmanship and courageous character of these great patriots.

The adoption of a foreign policy is a power and duty of the Congress. The authority of the executive department in this matter has been grossly exaggerated. There is nothing in the Constitution which indicates any intention to give the President or the Secretary of State exclusive control over our foreign relations. On the contrary, the final authority in matters of foreign policy, as in matters of domestic policy, is lodged in the elected representatives of the people. Of course this policy must largely be carried out by the Executive, and in so doing, he has considerable discretion. The duties of the Congress, the Executive, and the courts in these matters were well understood by the early American statesmen, although there seems to be some misunderstanding within recent years. George Washington did not, as is often said, establish for America a policy of neutrality. He simply recommended it. His recommendation occurred in a message, not to Congress, but to the American people—both of his own and of future generations.

It is said that "you cannot legislate neutrality" and that, instead, we should allow our course to be charted in accordance with established principles of international law. The law of nations recognizes the right of each sovereign to participate in a war or to remain neutral, as the interests of that sovereign may best be served. It recognizes the right to sell arms and supplies or to refuse to do so. In either case, its participation or nonparticipation, its selling or nonselling is governed by the rules relative to neutrality, blockade, and so forth, which have been established by common usage of the family of nations. But the actual determination of the policy of neutrality or participation—by sales of munitions or otherwise, is to be determined by the nation itself.

Furthermore the rules of warfare under international law are now in a sad state of confusion. This is due to the use of the submarine and the airplane. The nation which undertakes to sell munitions in the next war "in accordance with the principles of international law" will find it has an uncertain reed on which to depend. It will find itself caught between the conflicting claims of certain groups of nations in the matter of the submarine blockade, for example. It will have the choice of submitting to the claims of one group or of trying by force to maintain the older principles of international law established before these new weapons came into effective use.

We admit that "you cannot legislate neutrality" any more than you can legislate prosperity, good health, or good morals. However, many of us believe that a certain course of conduct imposed upon our own citizens is more conducive than some other course to neutrality, to peace, to prosperity, and to morality. It is true that selfishness, greed, propaganda, and prejudice may eventually break down the barriers erected by law and lead us into war anyway. However, we will be no worse off than if we had never erected the barriers. Is it not wise to maintain a policy that has kept us at peace in the past and to avoid those things which have on other occasions led to war?

Two different courses are being urged on Congress. The first is a policy of disinterestedness—of aloofness from the troubles of other nations—that is, of strict neutrality. The second course is that of interestedness, of entanglement, of attempting to aid by one means or another those nations whom we consider our friends. The first plan would keep us out of war by staying entirely away from the war after it started and by announcing our intention so to do before hostilities began. The second aims to keep America out of war by taking active steps to prevent a foreign war from starting.

Both of these views are urged with great sincerity and persuasiveness by people whose only desire is to keep America at peace. It is my firm conviction that the interests of our country will best be served by adopting and maintaining the first course—that is, of strict neutrality—and I wish only to suggest the following reasons:

First, it does not involve us in the risks necessarily incident to the second course.

In this latter plan we would become an active participant in the poker game now going on in Europe. The State Department is rather frank about it. It requests the Congress

to deal it a hand consisting of the unlimited resources and manpower of the country and to give it unhampered authority to play this hand, as it may see fit. This policy might succeed in bluffing other nations, or at least in calling their bluff. It might prevent a war from starting. This does not mean that our conduct would necessarily bring about a just and lasting peace. It would simply mean that the internal affairs of Europe would, for the time being, be settled in accordance with the views of those nations that we choose to support. This might, or might not, be a good thing for the future of the world.

Let us not forget that our presence at the peace table after the last war did not prevent the harsh and severe settlement which is now an important cause of the present trouble in Europe. Suppose, however, the so-called aggressor nations declined to be bluffed. Would we then go to war to make our bluff good? Would we again shed American blood on distant battlefields? This would seem to be a pretty large price to pay for the privilege of sitting in a game in which we have no business in the first place.

Second, a policy of strict neutrality has an excellent chance of keeping us out of war.

I do not agree with the oft-repeated statement that America could not be kept out of a major foreign war. Our military and naval experts agree that we cannot be successfully invaded. If we get into war, therefore, it will be because we choose to go to the war, and not because the war has come to us. If we again allow uncontrolled sale of munitions, reasons will later be urged for going to war. But these reasons will not be the defense of our country, nor will it be in defense of any interest that is entitled to protection. Of course, we could not remain unaffected by a European war. It might be necessary to make a drastic change in our domestic economy. But we could make the change. It would be a heavy price to pay, but participation in the war would be a heavier one.

Neutrality

EXTENSION OF REMARKS
OF
HON. FOSTER STEARNS
OF NEW HAMPSHIRE
IN THE HOUSE OF REPRESENTATIVES
Monday, July 10, 1939

EDITORIAL FROM THE CONCORD (N. H.) MONITOR OF JULY 5, 1939

Mr. STEARNS of New Hampshire. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Concord (N. H.) Monitor for July 5, 1939:

[From the Concord (N. H.) Monitor of July 5, 1939]

NEUTRALITY

No law which Congress can pass can alone keep this Nation at peace. A neutrality law which is lacking in wisdom might readily help break the peace. The chances of wise neutrality legislation are excessively slim. The Neutrality Act of a recent session of Congress provides a good illustration of how unsound such legislation can be. Enforcement of this law illustrates how the purposes of a neutrality act can be twisted or ignored in actual administration.

The American people themselves hold the only good answer to the continued neutrality of this Nation. Those who happen to occupy the seats of government will not long go against the wishes of the American people as a whole, or the wishes of any considerable majority. If the people wish to remain neutral, this country will remain neutral. * * *

There is no doubt whatever that the American people want peace, not only for this Nation but for all nations. But neutrality on the part of a single country is not necessarily any insurance of peace. A house surrounded by other houses which are on fire is almost bound to be burned, also, and the American people know that this is so.

There is probably no great accord among Americans as to the exact form which neutrality legislation should take. There is, however, a keener appreciation of methods it should avoid. This sense has discarded every proposal yet made which has been seriously considered. It also arouses an intuitive reaction which dictates the soundest neutrality legislation as none at all.

Three Editorials

EXTENSION OF REMARKS
OF
HON. DEWEY SHORT
OF MISSOURI
IN THE HOUSE OF REPRESENTATIVES
Monday, July 10, 1939

EDITORIALS FROM THE CINCINNATI TIMES-STAR

Mr. SHORT. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorials from the Cincinnati Times-Star:

[From the Cincinnati Times-Star of July 4, 1939]

WHY THEY FOUGHT AND THEN WHAT THEY DID

Americans declared their independence and made it a fact in the Revolution because, as the Declaration asserts, they would have no more of a monarch who had attempted to control the judiciary; had "erected a multitude of new offices, and sent hither swarm of officers to harass our people and eat out their substance"; had "excited domestic insurrections among us," etc.

The new Nation, thus launched on July 4, 1776, has survived and become powerful through four major factors: (1) It adopted a Constitution which safeguarded the rights of States, individuals, and minorities and assured a Government of laws rather than men. (2) The first and greatest President, commander in chief in the Revolution, rejected with anger all overtures to make himself king or dictator—overtures which, when made to successful commanders in other republics of the New World, had direful consequences; by keeping both his acts and his thoughts within the framework of the Constitution, Washington set an example respected by nearly all his successors. (3) The first President refused to consider a third term, and thereby set another great precedent. (4) He kept away from the network of European wars, and through the years resounds his great counsel against "entangling alliances."

It will be salutary to Americans on their national holiday to recall why they threw off the yoke of a stubborn and stupid king, and how the ship of state was set on a course which has brought it on even keel across the ages.

ALMOST A ROUT

The fiscal year dead-line of midnight, June 30, found the administration forces in Congress in a condition resembling a rout, this although the Senate is Democratic by 3 to 1, the House Democratic with nearly 100 votes to spare. It also found a President who likes to speak of himself as his party's "leader" in something of a temper. By 200 to 188 the House had passed a neutrality bill which defies the administration by including a modified arms embargo provision. The President's power to devalue the dollar died at midnight, at least for the time being, Republican opposition preventing the bill to renew it from coming to a vote. The relief bill which he signed reduces the power he formerly exercised to spend money as he chooses and abolishes the Federal theater, one of his pet projects.

Mr. Roosevelt scolds, of course, but has only himself to blame. Neither Congress nor country is in mood to trust his discretion, whether it be in the matter of devaluing the dollar, or of permitting shipments of munitions to belligerent nations. The power to regulate money is vested by the Constitution in Congress, not in the Executive. So is the power to declare war, and there is justifiable misgiving that the President's handling of the munitions question might make war inevitable. Nor is the President in position to denounce Congress wherever its appropriations have exceeded his requests, for wherever they were less he set up a clamor that gave impetus to the pressure groups. If, as he says, Congress passed the farm appropriation bill without providing new taxes therefor, it merely took a leaf from his own book—which is to spend and spend and spend, and get the funds by borrowing rather than taxing.

For whatever of confusion and divided counsels has been manifested in the Senate majority, the President is responsible alone. His initial mistake was in insisting on the choice of BARKLEY as Senate leader; the Kentuckian has his good points, but leadership is not one of them. And what else could Mr. Roosevelt expect from a body every Member of which, whatever his outward professions might be, was inwardly angered by his attempt to punish in the 1938 party primaries Democrats who had voiced its deliberate judgment?

HERE'S THE ARGUMENT

The figures of casualties in the World War which follow are almost incredible, yet they are printed in the 1939 World Almanac with the statement that they were compiled by the United States War Department.

According to this source, the Allied Powers mobilized 42,188,810 men, of whom 22,089,709, or 52.3 percent, were killed, or died, or were wounded, or were made prisoners, or reported as missing. Russia's 76.3 percent of casualties was the highest. Japan's 0.2 percent of casualties was the lowest. The next lowest was that of the United States—350,300 casualties, or 8 percent.

On the side of the Central Powers, 22,850,000 men were mobilized, with 15,404,477 casualties, or 67.4 percent. Austro-Hungary's casualties, which are listed as 7,020,000 out of 7,800,000 mobilized, or 90 percent, were the highest on either side.

Out of a total mobilization on both sides of 65,038,810 men, no less than 37,494,186 were killed, or died, or were wounded, or were made prisoners, or were reported missing. The grand total casualty percentage was 57.6 percent. Known deaths were 8,538,315.

This macabre parade, some consciousness of which still haunts the minds of men, is the argument for not starting anything again.

The Hatch Bill

EXTENSION OF REMARKS

OF

HON. JERRY VOORHIS

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Monday, July 10, 1939

EDITORIAL FROM THE NEW YORK WORLD-TELEGRAM

Mr. VOORHIS of California. Mr. Speaker, under leave to extend my remarks I am pleased to include the following editorial from the New York World-Telegram:

[From the New York World-Telegram]

A VOTE TO WATCH

The much-amended and devitalized Hatch bill will be brought to the House floor for a showdown vote some time next week or the week following.

People who are interested in cleaning politics out of relief and in having public servants devote their time to the public service, rather than to political activity, will want to watch how their Congressmen vote on this measure.

The first thing to keep in mind is that a vote for or against the Hatch bill in the form in which it will be presented to the House will be a vote of no significance. For the measure that is being brought to the floor is one without substance.

The House Judiciary Committee not only eliminated the prohibition against administrative Federal officials participating in "political management and political campaigns;" it even went so far as to write in a specific authorization for those officials to take active part in such political affairs. And in that portion of the bill banning campaign-fund solicitations in W. P. A. and other relief agencies, the committee specifically exempted supervisory officials—virtually serving notice on them to get ready for the shake-down.

The real test will come when Representative DEMPSEY (D., N. Mex.) proposed an amendment restoring those vital provisions to the Hatch bill. So watch how your Representative votes on the Dempsey amendment. If he votes "aye" you will know he places his country above politics and if he votes "no" that he places politics first.

Neutrality

EXTENSION OF REMARKS

OF

HON. COMPTON I. WHITE

OF IDAHO

IN THE HOUSE OF REPRESENTATIVES

Thursday, June 29, 1939

STATEMENT BY JOHN W. WENTERICK

Mr. WHITE of Idaho. Mr. Speaker, the people of the United States through their Congress, are considering legislation to effectuate our policy in dealing with foreign countries in time of war.

There is nothing more important to the welfare of our country, to the security of peace and happiness of our people, and the stability of our Government than the policy of maintaining strict neutrality in dealing with foreign governments.

Mr. Speaker, under permission to extend by remarks, I include for the consideration of everyone with the best interest of our country at heart, the statement of a patriotic American, Mr. John W. Wenterick of Cleveland, Ohio, appearing in a booklet entitled "Before it Becomes Treason," which has recently reached my desk.

Mr. Wenterick in the chapter on neutrality says:

While on the subject of neutrality may I say that military help prior to an outbreak of war is just as much intervention as help rendered after the war has begun. Our neutrality, if we want to be honest with ourselves, must be wholehearted in action. Either we are cold-blooded economists and sell our war supplies to any nation that pays our price, or we are neutral in the real Christian spirit and serve notice by law to foreigners and citizens alike that we consider the preservation of peace above economic interests.

Our neutrality also must be wholehearted in spirit, for to stay neutral does not mean to sit on the sidelines and cheer for the one side and throw pop bottles at the other faction. It means we must not take a course favorable or unfavorable to any belligerent. Neutrality should also be mandatory for our diplomatic representatives so that they with all their secrecy do not play the prelude to involvement of the United States in a catastrophic foreign war.

The war that we are talking about, the war that would leave the world in anarchy must be stopped—at least we must stay out of it.

When the American people in an unmistakable language demand real neutrality our Government is bound to listen. This Government is ours. But once in war, and that may be before this book is published, such thoughts would be treason, for then only lunacy and passion reign. And anyone giving moderate counsel is vilely abused, mobbed, beaten, and frequently thrown into prison by prosecutors, judges, and juries, all temporarily as unjust as the mob. It is the most amazing, and supercolossal phenomenon of collective human life, and dont tell me "it can't happen here."

I saw it happen with my own eyes, and should it happen again, for no matter what reason, you may bet your last cent on the fact that opinion 10 years hence will hold that we should have stayed at home and tended to our own knitting.

When the World War started in July 1914, the vast majority of Americans desired their country to keep out of it, and for that very reason selected President Wilson on his famous, or shall I say "infamous," battle cry, "I kept you out of war." Yet, in April 1917, the declaration by which the United States of America joined the Entente Allies passed Congress almost unanimously.

The most important factor in getting America into the war was the barrage of propaganda to which our people were subjected.

The same propaganda is going on today and comes from the same source as then. It is, therefore, extremely important for the welfare of the American people that public opinion be formed in the light of past experience rather than in an atmosphere of excitement and sentimental appeals. Cool heads, not partisanship, are urgently needed today.

Don't let our vast wealth and the lives of our young men be the cat's-paws of European diplomatic greed and animosities. More than two decades have passed since many a mother's son closed his eyes in agony, consoled only by the thought that he gave his young life in "the war to end wars," and in spite of the untold supreme sacrifices made the international situation today is even more distressing than it was in 1914. We had two decades of futility and have been constantly face to face with war somewhere on this globe.

We, as a race, have wasted 21 years, and even now are doing nothing worth while to get the answer to "What are you going to do about the peace of the world?" I hope you do not aim to solve the problem with another war to end wars or by calling names across the Atlantic or Pacific. Perhaps you are an advocate of the gospel that if you want peace you must prepare for war and turn over all the material wealth and mental resources of this great Nation to the business of planning war equipment.

What will you do? What shall I do to plan for peace? These are questions that are forced upon every one of us if we do not want our future generations and our social order to perish. Every time I think of this fateful question I marvel at the successful evasion of the real answer by our political leaders, by our teachers, by our editorial writers; yes, by our men of the cloth.

The answer to our longings for peace is so astoundingly simple: If you want peace, then teach the Christian principle, "Peace be with you," He said. If you want peace, you must prepare for peace by a sustained educational movement which does not preclude Christ and His teachings. He has set us into a world of abundance and has endowed us, unlike His creatures in the animal world, with a free will to act and think. And in these qualities only lie real liberty and freedom.

Every right-thinking man today should think of peace not only in his own country and his own people but in the Christian spirit of a universal peace instead of a world divided against itself. Do not wait for the other nation to make the start by standing aside, saying like the Pharisee, "O God, I give Thee thanks that I am

not as the rest of men." This very behavior is the curse of our day. Teach peace, prepare for peace.

If we want peace we must have sound and exhaustive social and political discussions by statesmen, teachers, writers, and clergy who have implicit faith in the God who said, "Without Me you can do nothing," for He is the source of all talents and their purpose is to lead ourselves and others back to God. And only God is peace. Until that gospel is understood and accepted there seems little hope for peace.

Let us head the parade with "March On, Christian Soldiers." And you, gentlemen of the press, I hope you see the soundness of my argument and do your share. Let's have the truth seen through Christian eyes. Don't let unsupported statements of disruptive propagandists who work for a diabolical cause go into circulation as gospel truth. Even the mixture of half truth and falsehood is deadly poison.

Twenty-five years ago we fell victim to diabolical propaganda which flooded our country. Let us not fall victim today to the same type of poison which is vitiating our morale.

Gen. Anthony Wayne

EXTENSION OF REMARKS

OF

HON. CLIFF CLEVENGER

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Monday, July 10, 1939

MEMORIAL OF THE GENERAL ASSEMBLY OF THE STATE OF OHIO

Mr. CLEVENGER. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following memorial of the General Assembly of the State of Ohio:

Resolution memorializing the Congress of the United States to adopt H. R. No. 6269, entitled "A bill to authorize a survey of the military route of Gen. Anthony Wayne during the Indian wars with a view to constructing a national parkway to be known as the General Anthony Wayne Memorial Parkway," introduced in the House of Representatives, May 10, 1939, by Mr. CLEVENGER

Whereas there was introduced in the House of Representatives of the Congress of the United States on May 10, 1939, a bill known as H. R. No. 6269, entitled "A bill to authorize a survey of the military route of Gen. Anthony Wayne during the Indian wars with a view to constructing a national parkway to be known as the General Anthony Wayne Memorial Parkway"; and

Whereas since the route of this proposed parkway follows the military route of Gen. Anthony Wayne during his campaign in the Northwest Territory in 1794, it is of primary interest to the citizens of Ohio, since the campaign was conducted practically in its entirety in Ohio, extending from Cincinnati to Detroit and into Indiana: Therefore be it

Resolved, That the members of the House of Representatives of the Ninety-third General Assembly of Ohio hereby memorialize the Congress of the United States to adopt H. R. No. 6269, now pending before the House of Representatives, in order that the General Anthony Wayne Memorial Parkway may be established and perpetuated as a fitting memorial to the important part Gen. Anthony Wayne played in the opening and development of the Northwest Territory, and in particular the State of Ohio; and be it further

Resolved, That a copy of this resolution be forwarded by the clerk of the house of representatives to President Franklin D. Roosevelt, Vice President JOHN N. GARNER, and to the two United States Senators and to each Member of Congress from Ohio.

Public Ownership of Utilities

EXTENSION OF REMARKS

OF

HON. CHARLES HAWKS, JR.

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

Monday, July 10, 1939

LETTER FROM C. M. JANSKY, OF MADISON, WIS.

Mr. HAWKS. Mr. Speaker, under leave to extend my remarks in the Appendix of the CONGRESSIONAL RECORD, I include a letter addressed to the Honorable JOHN M. COFFEE by Mr. C. M. Jansky, of Madison, Wis.

This letter is in answer to statements made by the gentleman from Washington [Mr. COFFEE] in a letter dated March 20, 1939; and, because of the importance of the issues involved, I recommend its careful consideration by every Member of the House.

There have been too many misstatements of fact regarding the advantages of public ownership, and I submit this information in further defense of private ownership of business enterprises, in which I am a strong believer. If we are to obtain permanent relief from this depression, private business must be given an opportunity. Government expenses must be reduced, the tax burden lightened, and individual enterprise permitted to function without oppression from governmental agencies.

MADISON, WIS., *June 28, 1939.*

Mr. JOHN M. COFFEE,
House of Representatives, Washington, D. C.

DEAR SIR: In the June 15, 1939, issue of the CONGRESSIONAL RECORD is printed a copy of a purported letter addressed to me March 20 last. I say "purported," because I did not receive the original and the reprint in the RECORD is the first information I have had of its existence.

I repeat what I said in my former reply to your franked reprint of a radio speech, namely, that I do not have the time to comment on every statement and misstatement you make. I must either type the letter myself or pay a typist for copying it, and then I must pay the postage out of my own pocket, whereas you print and distribute your purported communications at the taxpayers' expense. I suppose that Congressmen recently voted themselves more clerks in order that their extended remarks might be more widely distributed. If that is ranting, make the most of it.

At the outset, I wish to say that I am in complete accord with your statement that "it is not unreasonable to expect that an educator in a public institution should have an open mind on the subject. His students * * * have a right to hear both sides of the question to permit them to form an unbiased opinion." In the future when my students ask for material on the relative merits of municipal and public ownership, I will refer them to the June 15, 1939, issue of the CONGRESSIONAL RECORD and to my letter that provoked your outburst. They will then be able to form an "unbiased opinion." Of course, this letter will be included in the reference. I am wondering, however, if noblesse oblige does not also apply to Congressmen.

If noblesse oblige applies to Congressmen, and I think it does, as well as to school teachers, then why do you, without evidence, accuse me of crediting and disseminating "paid propaganda of sworn enemies of public ownership?" Not a single word or datum in my former letter was taken from the documents of the E. E. I. or any propagandist for private ownership, paid or unpaid. The sources of my material are the official reports of the municipal utilities of Tacoma and Seattle, the Federal Power Commission reports, the official reports of the Madison Gas & Electric Co., the Seattle Chamber of Commerce, the Seattle Municipal League, the Seattle Post Intelligencer, and the bulletins of the United States Census Bureau. If there are any errors in the conclusions, they are mine and not of any paid advocate of either municipal or private ownership of utilities. Can you say as much? What is Carl Thompson's business and who pays him?

Before I discuss more in detail your two paragons of excellence, I want it distinctly understood that I care not how Tacoma and Seattle run their utilities. I am not criticizing them. I am merely trying to correct some misinformation that is continually being spread by municipal ownership propagandists. The utility of Tacoma is no more typical of municipal utilities than the Madison Gas & Electric Co. is of privately owned utilities, and if Seattle's City Light is typical, then the municipal utilities set a poor example. One outstanding municipal utility no more proves the superiority of municipal ownership than one swallow makes a summer.

SEATTLE'S CITY LIGHT

Almost the very first statement you make, namely, that I said the local utility paid $6,000 in taxes is so absurd that I need make no comment. What the local utility paid in taxes will appear later.

As to the "falsehoods" about the Seattle utility, will you please refer to its official report for 1933? There you will find under the heading, "Income, profit, and loss for the year ending December 31, 1933," the following item: "Accrued city occupational tax, $125,642.50." Again, in the April 23, 1934, issue of the Chicago Tribune is printed an advertisement of six investment houses offering to the public $5,000,000, par value, Seattle Light & Power bonds at a price to yield 5.25 percent. In fine print—so fine that it could easily be overlooked—is printed the information that the Seattle utility in 1933 paid in taxes $125,642.50. No mention is made of any other tax in either the official report of the utility or the advertisement. It is true that the accounting systems of both Tacoma's and Seattle's utilities are sui generis. They do not conform to the regulations of the Federal Power Commission and hence it is extremely difficult to compare their reports with those of privately

owned utilities, but as neither the official report nor the advertisement mentions any other taxes, it is reasonable to conclude that no other taxes were paid in that year. But that is not all. The advertisement mentioned above also contained the information that the assets of City Light were $43,209,916, against which there were outstanding bonds to the amount of $30,300,000. No wonder the bonds were being offered at less than par. The acknowledged assets were at least four times the assets of the Madison Gas & Electric Co., which in that year paid to the different governmental units the sum of $360,000. If City Light had paid a proportionate percentage of its assets as the local utility in taxes, it would have had to pay nearly $1,500,000. The significance of this sum will be disclosed later. The payment of even a million dollars in taxes would have bankrupted City Light.

But let's take your own figures, in which you include $45,030, which is not a tax but operating expense. Every utility pays its officials, and City Light did the same thing when it paid this sum "as a charge for services of general government departments." Deducting this sum, City Light in 1935 paid less than 5 percent of its revenue in taxes, whereas the local utility paid nearly 20 percent of its revenue in taxes. A comparison of these figures confirms what I said; namely, that in comparison with a private utility Seattle's taxes were insignificant.

But again that is not all. In the report for 1933 the average revenue per kilowatt-hour is given as 1.977 cents and not 1.9734, which you say is "another figure taken from unofficial sources." The latter figure is from the Seattle Municipal League report, but no matter, the official figure will do. In 1932 the average revenue was 2 cents. Your fellow Congressman, JOHN RANKIN, inserted some figures into the CONGRESSIONAL RECORD, to wit: "In 1934 the people in the State of Wisconsin used 1,888,207,000 kilowatt-hours of electrical energy for which they paid $37,026,068." If we multiply the consumption given by Mr. RANKIN by 1.977, we get $37,329,852.39, which is over $300,000 more than the people in Wisconsin actually paid. But the private utilities in Wisconsin paid some $6,000,000 in taxes, which is approximately three times as much as Seattle would have paid. I do not guarantee the accuracy of the above figures of consumption and cost. They are RANKIN'S and not mine. Most certainly you would not charge your colleague with being a "sworn enemy of public ownership." This should be enough to convince any impartial reader that City Light is neither a paragon of excellence nor a "yardstick" with which to measure the activities of private utilities, but let's pile a Pelion of facts upon the Ossa already given.

In the Seattle Post Intelligencer of September 1, 1935, there was printed the following:

"The deficit in the city's general fund is steadily mounting as a result of the unbalanced budget. This was revealed yesterday when a report filed by the comptroller, Harry W. Carroll, with the city council giving the results of his monthly check-up of funds in the city treasurer's office showed the general fund had $3,406,041.84 in outstanding unpaid warrants on August 31, with only $26,277.74 on hand to meet them.

"The street-railway fund was also heavily overdrawn, having $1,405,628.03 out in warrants and $69,566.86 on hand in cash."

Is it a profanation of the sacred cause of municipal ownership to suggest that if the municipal utilities of Seattle had paid in taxes the same percentage of their book values as private utilities do, a goodly portion of these deficits would have been liquidated? Are you answered, or do you want more official and semiofficial data? Then read this:

On page 39 of the report of the Municipal League of Seattle issued in 1935 on Seattle Municipal Light and Power System is this:

"During this same 21-year period had taxes been charged and paid in the amount of 10 percent of the gross revenues, the amount of taxes received by the community would have been $3,278,000. Even if it is assumed that the customers of the private utility serving the Seattle district benefited by the competition of the municipal light plant in a proportionate measure, which is a fair assumption, the total savings of the customers in the Seattle district would not have exceeded the amount of the taxes lost to the community."

As you say, "the whole story is not yet told," so let's compare the residential rates of City Light with those of some privately owned utilities. The following figures are taken from "official sources," the Federal Power Commission report on typical net and monthly bills for electric service, dated January 1, 1939.

Consumption (kilowatt-hours)	15	25	40	100	250
Seattle City Light	$0.75	$1.25	$2.00	$3.20	$6.10
Puget Sound Power & Light	.75	1.25	2.00	3.20	6.08
Portland, Oreg	1.00	1.25	1.88	3.37	6.07
Madison, Wis	.90	1.10	1.40	2.60	5.10
St. Louis, Laclede Power & Light	.65	1.07	1.43	2.85	5.70

The last four-named companies are all privately owned and all pay a greater percentage of their revenues in taxes than City Light. But you say, "I must admit that rates in Seattle are higher than they should be * * * for the simple reason that Seattle is forced to compete for every customer with a private company, etc.," as though that were a legitimate argument. In the advertisement of the six investment houses mentioned above it is stated that City Light serves 77 percent of the electric consumers in the city, and the above figures show that the Puget Sound Power & Light Co., City Light's competitor, charges exactly the same rates. It seems rather ridiculous to assert that a company that serves only 23 percent of Seattle's customers prevents a reduction in City Light's domestic rates. It would be nearer the truth to say that City Light's competition with the private company prevents the private company from reducing its rates at least to the level of those charged in St. Louis, which likewise has two competing companies. Furthermore, there are other cities with two competing utilities, one privately and the other publicly owned. Cleveland, Ohio, and Fort Wayne, Ind., are two such cities. Both utilities in these cities charge the same rates and in both the domestic rates are lower than in Seattle. (See table at end of letter.) Are you answered?

SEATTLE'S STREETCAR PURCHASE

You seem to be roiled by my charge that politicians were responsible for Seattle's acquisition of the decrepit street railway, which your versatile lieutenant governor proposed to use as a means for relieving unemployment "by placing a hostess on each car and serving cracked ice on the owl-car runs." See page 289 of Our Promised Land under the chapter headed "Cockeyed Politics in Hinterlands." As an alibi for the politicians you accuse those who were instrumental in acquiring the antiquated transportation system of dishonesty and you even hint at bribery, all of which is wholly irrelevant. Was the mayor elected because he was a small real-estate dealer or because he was a better politician than his competitor, and does a politician cease to be a politician when he accepts a bribe or is dishonest?

Did not City Engineer Dimock on November 4, 1918, say the price was fair both to the city and to the company, and did not the electorate approve the purchase on November 5, 1918? If the price was fair, what was concealed? You say "honest public officials were given no voice." How were they silenced? I did not know that a politician could be silenced. Your whole defense is what the lawyers call a plea of confession and avoidance. And what a lot of gullible voters there must be in Seattle to authorize the politicians to buy a street railway without knowing what it would cost. Now that the venture in municipal ownership is a complete failure, politicians are seeking other scapegoats. If, as you intimate, both the officials of the city and of the private company were crooks, why were they not tried, convicted, and imprisoned? I make no defense of crooked utility officials nor of crooked city officials, but one thing must not be overlooked—namely, that insofar as the Seattle Street Railway is concerned, municipal ownership is a flop.

TAX RATE IN SEATTLE

If you will reread what you say I said, you will discover I did not say "tax for all city purposes." I said "tax rate in Seattle," an entirely different thing. My source of information is the Seattle Chamber of Commerce, which, in a document entitled "Facts Worth Knowing About Seattle," dated May 15, 1935, on page 3, under the heading Real Estate and Taxation, says:

"Total value of real and personal property in Seattle in 1934, $584,686,854. Assessed valuation $292,434,427. Property assessed at 50 percent of its true value. Tax rate on $1,000 assessed valuation: State $6.52, city $20.78, county $19.53, schools $15.30, port 50 cents; total $62.63."

Dividing $62.63 by 2 to get the rate on full value, we get $31.32. In that year the rate in Madison was $22.50, but today it is $23.50. The difference between the two rates is near $8, believe it or not. Utility taxes have a marked influence on these rates. Last year the private utilities in this State paid nearly $9,000,000 in taxes. In 1934 the private utilities in this State paid 18.7 percent of their base revenues in taxes, the municipal utilities in Washington paid 4.7 percent, and the private utilities paid 14.9 percent of their base revenue in taxes. (See Federal Power Commission Electric Rate Survey, Rate Series No. 5.)

TACOMA'S MUNICIPAL UTILITY

You seem to think that because this utility has low domestic rates it is typical of all municipal utilities. As I have already stated, it is no more typical of municipal ownership than the Madison Gas & Electric Co. is of private ownership. Nevertheless, I have nothing to retract from what I wrote in my previous letter. Had you printed my letter in full, I would not discuss Tacoma further; but as you only made some extracts, a further explanation is necessary.

The annual report for the Tacoma utility for 1933 shows that it paid a gross earnings tax of $145,582.91. I know that under the heading "Payments to general fund and losses assumed by light division in lieu of taxes" several other items are listed. These items are: Street lighting loss, $35,329.96; gratuitous work, $562.51; damage to plant, $6,455.19; office rent, $1,500; 30 percent of general fund office salaries, $16,893.83; which, together with the gross-earnings tax amounted to $206,324.40, but several of the items are not taxes in the true sense of the word. Street-lighting loss is an operating expense; so are damage to plant, office rent, and 30 percent of general-fund expense. Deducting these, there remains less than $150,000, a sum less than 50 percent of the taxes paid by the local utility which serves a city a little larger than one-half the size of Tacoma.

It appears that you should get a more accurate propagandist to prepare your rebuttals. If you do, I am quite certain that he will understand exactly what I meant when I stated that Tacoma utility does not earn fixed charges. Please reread what I said, and you will find this sentence: "It is reasonable to assume that 11.5 percent is a fair charge against the assets of the Tacoma plant." Ask any consulting engineer, and I believe you will learn that most of them will think 11.5 percent is too low. Nevertheless, the New York Power Authority, of which the late Mr. J. D. Ross was a consultant, estimated that 11.5 percent of the depreciated value of a distribution system was a fair fixed charge, and I

applied that percentage to the total depreciated assets of the utility. Do you mean to say that no fixed charges should be assessed on the other elements of the plant?

Until recently the rates of the Tacoma utility were determined by ordinance No. 11,121, effective January 1, 1935, a section of which reads:

"For single residence, flat, or apartment, when separately metered, 4.5 cents per kilowatt-hour for the first 40 watt-hours' consumption per square foot of equivalent floor space (minimum 500 square feet); 1 cent per kilowatt-hour the next 500 kilowatt-hours and all remaining kilowatt-hours one-half cent per kilowatt-hour." When that ordinance was changed I do not know, but I am quite certain it was not changed before 1937 for the report of the utility for that year states "the number of kilowatt-hours is determined by the size of the house." Undoubtedly there are many residences in Tacoma whose first block was more than 40 kilowatt-hours. But let's take 40 kilowatt-hours as the first step. Here in Madison 40 kilowatt-hours cost $1.40 and in Tacoma the same consumption under the above rule would cost $1.80. The like or corresponding charges for 100 kilowatt-hours in the two cities would be $2.60 and $2.40 respectively. Deducting 11 percent of its gross revenue which the Tacoma utility claims it paid in taxes in 1937, and 20 percent which the local utility paid in taxes, we get cost of 100 kilowatt-hours in the two cities to be $2.14 and $2.08 respectively. But as stated before, Tacoma charges to taxes items that should be charged to operating expense.

Please do not shift from one utility to another. We were comparing the Tacoma utility with the Madison Gas & Electric Co. and not with the Wisconsin Power & Light Co. You claim that Tacoma is a typical municipal utility. If so, the Madison Gas & Electric Co. is a typical private utility. It pays more than twice the taxes the Tacoma utility pays on a book value of less than one-half the book value of the Tacoma plant. I said nothing about the Wisconsin Power & Light Co. Why drag that in by the heels? If local conditions in Seattle compel City Light to charge a high rate, it is likely that local conditions affect the rates of the Wisconsin Power & Light Co. This utility serves not Madison but a large part of the rural area of the State of Wisconsin.

I wonder where you got your statistics on the power generated and number of domestic customers in Madison and Tacoma. You say: Schedule F, use of energy—domestic.

	Madison	*Tacoma*
Domestic consumption, kilowatt-hours	51,831,201	52,367,632
Number of customers	75,000	31,382
Kilowatt-hours per customer	691	1,698

Evidently not only every resident of Madison must be a domestic customer, but in addition household pets must also receive electric service, or, perhaps, the squirrels in the trees heat their nests in the winter with electricity. The United States Census shows that in 1930 the total population of Madison was 57,899 and of Tacoma 106,817. The local utility has 20,400 domestic customers, which is more than it had in 1933, while the number of like customers has decreased in Tacoma from 32,062 in the same interval to 31,382. The average annual domestic consumption in Madison is not 691 but 1,350 kilowatt-hours. This is official.

COMPARISON OF LACLEDE POWER AND LIGHT RATES WITH TACOMA'S

I stated that up to 100 kilowatt-hours per month the rates of the LaClede Power & Light Co. were lower than those of Tacoma. Your schedule E confirms that statement. Are there no customers in Tacoma that use less than 100 kilowatt-hours per month? I am certain that there are many. The LaClede Power & Light Co. needs none of my sympathy. It is doing quite well even if it does charge many of its customers less than the utility in your home city.

'Tis true that an 8-year-old child should know that everyone must pay something for the use of borrowed money. Perhaps I should exempt the Federal Government, but a Congressman seems not to know that every business must collect in revenue what it pays out in taxes, private utilities included. You say, "You know that consumers actually paid the tax in their rate and that the company merely, in effect, acted as a tax collector." That should also be known by an 8-year-old child, for it is true of every business, as well as you and me. Our constituents also pay our taxes, but a Congressman should know that it is unfair to load the private utilities with exorbitant taxes and then accuse them of charging excessive and exorbitant rates and of robbing their customers. Your fellow Congressmen and Senators have charged the utilities with overcharging their customers by more than a billion dollars, when the total domestic revenue was less than $700,000,000. Likewise, a Congressman should know that it is grossly unfair to take the rates of one outstanding municipal utility and compare them with the average rates of private utilities. Washington voters may fall for that trick of propaganda, but intelligent voters will ask, Why not compare the rates, taxes, salaries, etc., of all municipal utilities with like averages of private utilities?

Such a comparison has recently been made by the Bureau of Census, Department of Commerce. The comparison may astonish you.

The average salaries and wages of all classes of employees of private utilities were $1,723 a year, as compared to $1,463 for municipally owned utilities. The Census Bureau showed in its bulletin for May 31 that salaried employees of private utilities received an average of $1,833, whereas those working for municipal utilities received $1,419. Wage earners received an average of $1,632 when working for private utilities and $1,494 when working for municipals. The consolidated income, operating revenue, and expense statements of the two classes of utilities showed that the municipal utilities paid total taxes of $2,635,349, amounting to approximately 1.5 percent of their gross revenues, while privately owned utilities paid $359,603,642 in taxes. This sum amounted to approximately 14 percent of their gross revenues. But the important fact disclosed by the Census Bureau Bulletin of May 23 is that the privately owned utilities charged their consumers less per kilowatt-hour than the municipals, the comparative costs being 2.1 cents per kilowatt-hour for privately owned utilities and 2.6 cents per kilowatt-hour for municipal utilities.

Thus the average cost to the municipal consumers is approximately 24 percent higher than that to the private consumers. Please tell me which consumers pay the taxes, or do you consider the Census Bureau "a sworn enemy of Government ownership"?

A few words in conclusion. I agree that "the question of Government ownership involves a clash between two great schools of thought and involves fundamental differences in politics and economic opinion." The controversy, however, involves more than that. It involves a conflict between political expediency and intellectual integrity. It also involves a clash between the doctrines of socialism and of private, individual enterprise. You may think that ridicu'ous, but consider the basic argument of the Government-ownership advocates. It runs something like this: The furnishing of electricity is a Government function because electricity is a necessity, or they invert the syllogism and say, electricity is a necessity and, therefore, it should be supplied by the Government. Aside from the fact that the conclusion from either premise is a non sequitur, if accepted, it proves too much. There are many, many things more necessary than electricity, such as food, clothing, shelter, heat, etc., etc., and according to the syllogism, all of these should be owned by the Government. That is socialism or stateism pure and undefiled. Having by assertion proved that it is the function of Government to furnish electricity, clever politicians, sensing lucrative jobs, proceed by cajolery, sophistry, and appeal to personal interests to persuade a majority of the people to force a minority into a business that is wholly the product of private initiative, resourcefulness, courage, enterprise, and ingenuity of individual men, and not of governments nor of the inchoate body known as society. This persuasion is always sugar-coated with promises of lower rates, better service, lower taxes, and the like. Taxes are invariably shifted from the utility onto other property as shown by the Bureau of Census bulletin cited above. If the governmentally owned utilities paid taxes of the same percentage of the value of their properties, as do private utilities, most of them would be bankrupt, those owned by the Federal Government not excepted. Bonneville power project has been completed for nearly 2 years, and up to date it has sold very few, if any, kilowatt-hours. The interest alone on the cost of the development at 3 percent amounts to more than $3,000,000. If taxes were added, the enterprise would be bankrupt. The interest, however, is not paid by the project but by the taxpayers of the country as interest on the public debt. Not within the memory of men of my age will there be any navigation worthy the name on the Columbia River, and if there were, it would be to the great disadvantage of Portland, which is not on the Columbia but on the Willamette River. The residents of the Tennessee Valley are now short some $3,500,000 in taxes and the taxpayers of the country are subsidizing the electric consumers of T. V. A. Even Senator NORRIS recognizes this, for on the floor of the Senate he in effect said: "If T. V. A. paid the same taxes as are now paid by privately owned utilities in that section, T. V. A. would be out of business in 3 months." (CONGRESSIONAL RECORD, April 13, 1939, p. 4214.)

In speaking of these projects the late dean of engineering of the Massachusetts Institute of Technology, the leading engineering school in the country, said: "To build a great dam to supply electric power in a region already supplied with power, to irrigate land in a region of no inhabitants while farm land stands idle close by, to render navigable a stream that proceeds into a wilderness, are fool pieces of work in any langauge."

As stated above, the electrical industry is par excellence the product of private initiative. From the discovery of electromagnetic inauction by Michael Faraday, individuals like Edison, Steinmetz, Thompson, and a host of others, in laboratories and other fields have contributed to the development of a gigantic industry that last year paid in taxes over $350,000,000, and in many ways contributed to the well-being of humans. Electricity is much more the product of man than the food we eat and the clothes we wear. With the exception of the energy in the coal or water, every agency in the production of electricity and its utilization is the result of private research, private initiative, and private resourcefulness and the final development has not been reached. Not only has man by his ingenuity made possible the use of electricity to lift the burden of drudgery from the bent backs of men and women, but its development has made possible researches in other fields the results of which have been of incalculable benefit to humanity. I mention only one: Without high-voltage electricity X-rays would be unknown. Anyone can name many others. The fundamental issue between the advocates of government ownership and the advocates of private enterprise is the stifling of all of this initiative and enterprise by the dead hand of government, many of whose officials do not know the difference

between a kilowatt and a volt. Governmental ownership is merely pirating or appropriating the results of man's endeavors. Business is no legitimate function of government.

Very truly yours,

C. M. JANSKY.

Comparison of the cost of specific consumptions, taxes included

Consumption (kilowatt-hours)	15	25	40	100	250
Seattle	$0.75	$1.25	$2.00	$3.20	$6.10
Cleveland:					
Municipal	.60	.85	1.27	2.80	5.55
Private	.60	1.00	1.60	3.75	7.25
Fort Wayne:					
Municipal	.53	.88	1.40	3.50	5.90
Private	.53	.88	1.40	3.50	5.90

A People's Movement

EXTENSION OF REMARKS

OF

HON. JERRY VOORHIS

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Monday, July 10, 1939

Mr. VOORHIS of California. Mr. Speaker, the American people boast a long and glorious history. And not the least important pages of that history have been written by people who have participated in great popular movements, fired by devotion to a cause in which they believed, hoping for a solution of problems that afflicted them.

In recent years the greatest such popular movements have centered around the cause of old-age pensions. This is not due to any especial cupidity on the part of our elder citizens. It is due fundamentally to this: that millions of citizens have sensed the fact that the central need of our time is a system of control of the flow of purchasing power which will keep the Nation's ability to buy and consume in line with its power to produce. The people have seen that there is poverty in the land not because there needs to be but because some numbers in financial ledgers are put down in the wrong places and by the wrong people. They have understood that the trouble is not with production but with distribution and that men are idle only because the buying power is not present to purchase what they would produce if employed. And gradually the pension movement and the monetary-reform movement are drawn together.

Perhaps this is too simple a way to state it, but the analysis is fundamentally correct and increasing numbers of Americans are realizing it.

And so while Congress strains at gnats the time draws near when it may have to swallow a camel. For this movement in all its aspects is not one that will pass away nor one that can be beaten down. It comes too close to having the answer to the problem of the machine age.

For a long, long time California has been America's land of promise. It was so in gold-rush days. It is so today. Not only have the dispossessed farm families of the Middle West gone there to try to find a meager existence working in the harvest fields; but back from California one after another have come proposals for the solution of this problem which belongs to all the Nation. Latest and perhaps mightiest of all these movements is the so-called "ham and eggs" movement, more correctly styled California retirement life payments. And whatever else may be said about it, here is a great human movement with all the earnestness, all the devotion, all the possibility of elation or bitter disappointment that every such movement contains.

A glimpse at that movement may be worth while even in so staid a periodical as the CONGRESSIONAL RECORD. And a most vivid glimpse is given us in an article written by Tom O'Connor and published in the June 24 edition of the Los Angeles Evening News, portions of which I quote herewith:

Some people will be inspired by the spectacle. Some will be saddened. Some will sneer, some will snicker, some will snort.

But no one, unless he be blind and deaf and senseless, can go to Shrine auditorium of a Sunday afternoon, gaze out over the sea of faces, hear the deafening cheers for "ham and eggs! Ham and eggs!" and not be profoundly affected * * *.

Who are these people? Who are these thousands of "ham and eggers" who never tire of hearing the gospel of purchasing power expounded according to St. Warrant, who never lose their willingness to trade pennies in hand for $30 warrants in a Thursday bush?

Who they are, what they are, and, most of all, why they are—these are questions that California cannot afford to let go unanswered. You can laugh off "screwball economics" and you can laugh off "funny money"; but you can't laugh off 1,000,000 votes, no matter how much laughing gas you take. * * *

Obviously it's impossible to interview even the one hundredth part of the 331,000 enrolled members of the California pension plan to get such a picture of the typical and average "ham and egger."

But an afternoon spent casually chatting with 10 or a dozen specimens selected at random from the Sunday afternoon crowd at the shrine provides a pretty fair slant on what kind of people have gone in for "ham and eggs," and what kind of thoughts are buzzing around in their bonnets.

One thing becomes quickly apparent: These "ham and egg" people aren't all on relief, as some persons would like to believe. Parked around the shrine on Sundays are plenty of 1938 and 1939 cars with "$30 Every Thursday" plastered on them just as prominently as on the old "jalopies." * * *

A sublime faith—a demonstration of the power of wishful thinking virtually unprecedented, even in politics—characterizes the "ham and egg" rank and file.

They are the dispossessed, searching through the wilderness for a better way of life, and, though they be many stages removed from the actual pinch of poverty—two rank and filers put up a $70,000 property bond when Willis Allen was sued last week—all of them feel that somehow the present economic set-up doesn't provide a square deal.

The "ham and eggers" aren't "alien agitators," "Communist dupes," "dangerous radicals," "subversive revolutionaries." They're ordinary American people, with ordinary American backgrounds, and they salute the flag and sing Glory Hallelujah with equal fervor.

The heart of the proposal which has drawn these people together is almost universally misunderstood. True, State warrants are proposed to be issued in an amount large enough to pay $30 in such warrants to everyone in the State over 50 years of age every Thursday morning. But each week a 2-percent tax is levied against all outstanding warrants and they are to be redeemable at the end of 52 weeks in United States money raised by this tax. "No increase in total buying power there!" someone exclaims. To which the "brains" of the "ham and eggs" movement will answer, "But we are putting into circulation a nonhoardable currency that will turn over far more rapidly than the money we are now using. That is our real purpose."

Other people beside "ham and eggers" have been thinking about that same purpose.

Will it win in the special California election? Will it work if it does win?

These are questions only the future can decide. But this much is certain. A national system of pensions for the elder citizens of America and a reform of the Nation's monetary system to bring it in line with the requirements of the age in which we live—these are going to come.

The task of statesmanship is to see that they come soon enough and in sound enough form to prove what every American wants with all his heart to prove—that our system of government and our way of life are more than a match for any yet devised on the face of this earth.

The Decline in American Exports of Cotton to the United Kingdom

EXTENSION OF REMARKS

OF

HON. ALLEN T. TREADWAY

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Monday, July 10, 1939

LETTER FROM WILLIAM H. CLIFF

Mr. TREADWAY. Mr. Speaker, under leave to extend my remarks in the RECORD, I include a letter recently received by

me dealing with American exports of cotton to the United Kingdom.

BOSTON, MASS., *June 28, 1939.*

Hon. ALLEN T. TREADWAY,
House Office Building, Washington, D. C.

DEAR CONGRESSMAN TREADWAY: The decrease in sales of our raw cotton to Great Britain is of real moment to this country, and it is very likely that a large factor in the cause for such decrease is the trade agreement consummated last March between the United Kingdom and India. In case you have not seen copy of same, you may be interested in having the wording of paragraph 2, article X, of said agreement, which reads as follows:

"His Majesty's Government in the United Kingdom undertake that they will continue to use all possible efforts in commercial interests to stimulate the consumption of Indian cotton in all possible ways, including technical research, commercial investigation, market liaison, and industrial propaganda. They have taken note that it is the desire of cotton growers in India that as much as possible of their production of short and fair staple varieties of cotton should be absorbed in the United Kingdom. They have also taken note, and invite the Government of India to take note, that the Lancashire Indian Cotton Growing Committee, set up by His Majesty's Government in the United Kingdom to stimulate the consumption of Indian cotton, have expressed their sympathy with that desire and their intention to take all practicable steps to assist in its fulfillment. It is recognized that the fulfillment of the foregoing objectives largely depends on the continued pursuit by all interests concerned in India of the policy of improving the quality and staple of Indian cotton exported to the United Kingdom by all practicable means."

England has been for many years our largest export outlet for this product. She was so anxious to get our raw cotton that as far back as the Civil War she threatened to become embroiled in that strife. In her agreement with us, which became effective January 1, 1939, she graciously consented to continue to take that product free of duty. She thereby, in her usual diplomacy, kept the door open for our raw cotton, but she will take only sufficient to fill her excess requirements.

It is quite possible that our sales to her will eventually reach the vanishing point, because in the paragraph quoted above she has agreed to preserve her market by propaganda and other means for the benefit of India. In that pact, which was consummated less than 3 months after the one with us had become operative, she agrees to import Indian cotton in the following quantities: The current calendar year 500,000 bales, next year 550,000 bales, and all subsequent years 600,000 bales. Our sales to her, during the first month of this particular agreement, dropped over 10,400,000 pounds, which decrease resulted in a loss in excess of $600,000 to the American cotton grower.

Naturally, with her buying short and fair staple cotton in huge amounts from India and the long-staple variety from Egypt, plus additional purchases in Brazil, the outlook for our cotton grower is very dubious. Because of these purchases and on account of our reduction of duty on cotton fabrics, she is now in a position to flood the American home market with her manufactures of cotton. For instance, prior to the first of the year, when our duty was 44½ percent, English cotton broadcloth sold in the domestic market at 58 cents per yard. Now, with the duty reduced to 36 percent, it is selling for 34 cents per yard, while prices on comparable American fabrics range from 53½ to 56½ cents per yard. It is only a question of time when the American mills will of necessity buy less and less American raw cotton from the American grower.

With warm personal regards, I am

Sincerely yours,

WILLIAM H. CLIFF.

Religious Liberty Versus Religious Intolerance

EXTENSION OF REMARKS

OF

HON. FRANCIS H. CASE

OF SOUTH DAKOTA

IN THE HOUSE OF REPRESENTATIVES

Monday, July 10, 1939

ARTICLE BY HON. CLARENCE J. McLEOD

Mr. CASE of South Dakota. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article by the gentleman from Michigan, Hon. CLARENCE J. McLEOD:

[From Liberty, third quarter, 1939]

RELIGIOUS LIBERTY VERSUS RELIGIOUS INTOLERANCE

(By Hon. CLARENCE J. McLEOD, Member of Congress from Michigan)

In a world suddenly gone beserk it is indeed gratifying to Americans that each of us may be the governor of his choice of religious beliefs; that we are part of a nation whose Creator is steering us safely through the muddy rapids that are crammed with the flotsam and jetsam of paganism, hereticism, atheism, and the propaganda of false gods. We all are, I believe, truly grateful that it has been our lot to be cast under the sheltering arms of a government that abhors intolerance and bigotry; one that permits no man through legislation to condemn or ridicule another because of his religious beliefs. That, in my humble opinion, is the important and essential principle of religious liberty.

GRADUAL DEFEAT OF INTOLERANCE

Because Americans have been so fortunate in this respect, it sometimes is difficult for them to realize that there was a time, for a period of many long years, when their forbears, the first American settlers, did not believe in such a principle of religious liberty. Even a hasty glance at recorded history will give them cause for astonishment.

When they read that New York, over 150 years ago, under its charter of rights, purported to grant freedom of religion to Christians only; that Maryland, founded by the Catholics, barred from religious liberty the Unitarians and all other Christian sects that did not believe in the Trinity, as well as Jews and Mohammedans; that up until 1784 Virginia recognized only the established Church of England; that in New Jersey, political privileges were withheld from Catholics; and that in Pennsylvania a statute read: "All public officers must declare and subscribe to their disbelief in transubstantiation, the adoration of the Virgin Mary, and the sacrament of the Romish mass as superstitious and idolatrous," they will wonder at the intolerance and short-sightedness of the Colonists.

As they read on through the undimmed pages of early American history for a possible lead as to why intolerance finally was exchanged for religious liberty, they will discover the story of Rhode Island's tenacity and determination—the result of Roger Williams' teachings—in refusing to ratify the Constitution of the United States until some guaranty was given that freedom of religious belief would be granted to all the States.

The letter that accompanied Rhode Island's ratification occupies, and will continue to occupy, a place in the archives of great documents. In spite of its brevity, that statement sets out the basic principle behind the first amendment to our Constitution, which declares that "Congress shall make no law respecting an establishment of religion, or prohibiting the free exercise thereof." It follows:

"That religion, or the duty which we owe to our Creator, and the manner of discharging it, can be directed only by reason and conviction, and not by force or violence, and therefore all men have an equal, natural, and unalienable right to the free exercise of religion, according to the dictates of conscience, and that no particular religious sect or society ought to be favored, or established by law in preference to others."

So far as the United States is concerned, the battle for religious liberty has been won. At no time since the inclusion of the Bill of Rights in our Constitution in 1790 has there been any successful attempt to overthrow that liberty. It is true that at various times since 1790 the religious liberties of certain sects have been threatened by other groups, but in no instance have such liberties been usurped completely or for more than a short space of time.

The story of religious liberty has been covered in this worthy periodical on numerous occasions in the past by far more able writers than I, and there can be little doubt that others will express their views in future issues. It is well that so many Americans have fought and will continue to fight for the retention of religious liberty. It is most important that our fellow countrymen constantly be reminded of their sacred heritage, their good fortune in being able to lay claim, among many other valuable things, to complete religious freedom.

POLITICAL "ISMS" AND RELIGIOUS LIBERTY

As we glance at the troubled world which lies about us, we are, I believe, more and more impressed with the grim and sinister aspects of conditions abroad. If we are to protect and retain our liberties, it is necessary that we always be on the alert and keep an eye open for anyone who would scuttle our civil and religious liberties for some other system of human management. In keeping our eyes trained for such invaders we should remember that the foundation of Americanism is class, racial, and religious tolerance; that the foundation of nazi-ism and fascism is religious hatred; and that the foundation of communism is class hatred. Our philosophy of government is based upon belief in God as the Supreme Ruler of the universe; nazi-ism, fascism, and communism are pagan philosophies of government which either deny, as in the case of the Communist, or ignore, as in the case of the Fascist and the Nazi, the existence and divine authority of God. Since nazi-ism, fascism, and communism are materialistic and pagan, hatred is encouraged, whereas the very essence of Americanism is tolerance.

The workings of the Communist Party in this country are well known by the great majority of Americans. In recent months their strategies and plans for the overthrow of the American system of government and the substitution therefor of a proletarian system, and their activities among the American labor class to engender class hatred, have been made public and are now a matter of common notoriety.

Without attempting to touch upon the communistic principle of distribution of wealth and property, and taking into consideration the attitude of the Communist Party toward religion only, the testimony of William Z. Foster, twice candidate of the Communist Party for President of the United States, before the Fish committee, is indicative of the danger which constantly is lurking in the background, awaiting an opportunity to overthrow and abolish religious freedom in this country:

"The CHAIRMAN. Does your party advocate the abolition and destruction of religious beliefs?

"Mr. FOSTER. Our party considers religion to be the opium of the people, as Karl Marx has stated, and we carry on propaganda for the liquidation of these prejudices amongst the workers.

"The CHAIRMAN. To be a member of the Communist Party, do you have to be an atheist?

"Mr. FOSTER. In order to be—there is no formal requirement to this effect. Many workers join the Communist Party who still have some religious scruples, or religious ideas; but a worker who will join the Communist Party, who understands the elementary principles of the Communist Party, must necessarily be in the process of liquidating his religious beliefs, and, if he still has any lingerings when he joins the party, he will soon get rid of them. But irreligion—that is, atheism—is not laid down as a formal requirement for membership in the Communist Party.

"The CHAIRMAN. Can members of the Communist Party in Russia be married in the church and maintain religious beliefs of that nature, and practice them?

"Mr. FOSTER. My opinion is that a member of the Communist Party of the Soviet Union who would be married in a church would not be of any value to the Communist Party.

"The CHAIRMAN. Could he maintain his membership in the party?

"Mr. FOSTER. He would not.

"The CHAIRMAN. He would be put out of the party?

"Mr. FOSTER. Eventually, if not for that specific act.

"The CHAIRMAN. Would it not be the same in this country?

"Mr. FOSTER. As I stated before, workers who would be so imbued with religious superstitions that they would be married in a church would be of no value to the Communist Party.

"The CHAIRMAN. And the same thing would happen to them in this country that happens to them in Russia?

"Mr. FOSTER. Of course."

If this testimony signifies anything, it signifies that ahead there are new battles to be fought toward the maintenance of religious liberties. The tortures suffered in past centuries, and the accumulation of blood spilled in the never-ceasing battles for religious freedom, it appears to me, are ominous precursors of what is yet to come.

It still is the cry of "right over might." How long it all will go on and what the result will be, I cannot venture to predict. This I know: Men are human, and regardless of their powers in this world, they must some day die; but faith will live on forever in spite of the widespread attempts to abolish man's God-given rights of free will and free thinking.

Our Relations With the Philippines

EXTENSION OF REMARKS

OF

HON. JOHN G. ALEXANDER

OF MINNESOTA

IN THE HOUSE OF REPRESENTATIVES

Monday, July 10, 1939

ARTICLE FROM THE PHILIPPINE-AMERICAN ADVOCATE

Mr. ALEXANDER. Mr. Speaker, pursuant to my resolution offered on May 19, calling for the appointment of a committee to study our relations with the Philippines, I herewith ask consent of the House to publish in the RECORD an article by Porfirio U. Sevilla, publisher of the Philippine-American Advocate and a critic of Quezon's administration.

This editorial brings sharply to the attention of the world the critical condition facing American relations in the Orient during the present Japanese campaign of Asiatic conquest.

The editor of the Philippine-American Advocate indicts the Philippine government, controlled by President Quezon, for collusion with Japanese-Spanish interests against the interests not only of the Filipinos but the peace of the United States.

The Advocate speaks for an independent Filipino league, representing the view and sentiment of a large minority headed by General Aguinaldo, and the veterans, the Right Honorable Juan Sumulong, the brain of the opposition leaders in the Philippines today; General Alejandrino, the director of the Popular Front; and various other independent opposition groups and leaders. Such a crisis warrants prompt investigation by Congress that we may be prepared to meet any emergency that may arise.

Publisher Sevilla's editorial is as follows:

CONGRESS MUST GET RID OF QUEZON BEFORE HE EMBROILS THE UNITED STATES—WHY I OPPOSE THE REGIME OF PRESIDENT QUEZON

(By Porfirio U. Sevilla, publisher)

For many months now the Advocate has conducted a publicity campaign against the present administration of the Philippine government. This campaign is devoted to a public cause—the dearest cause in the world to the patriotic people who are the subjects and victims of an exploiting government.

The time has come for a frank statement in review of the grounds on which our fight is based. It is high time that the two peoples most deeply interested—first of all, the 18,000,000 people of our Pacific archipelago; and, second, the people of the United States, who for over 40 years have been our best friends on earth—knew definitely the ground of our publicity fight in precise terms.

I am opposed to the administrative regime of President Quezon:

1. Because it places in increasing jeopardy, month after month, the liberty and national security of the Filipino people, even to the point of threatening their future independence and national existence when the Independence Act casts them upon the mercy of Providence.

2. Because the outstanding achievement of the Quezon administration has been to tighten the strangle hold of the armed "Machiavelli of the Pacific," who has already devastated the neighboring mainland and is now perfecting his "encirclement" of the Philippines.

3. Because outstanding executive acts and legislative measures have worked to increase Japanese immigration, Japanese land ownership, Japanese industrial and shipping control, and even Japanese political influence in the land of the Filipinos seeking national independence.

4. Because President Quezon, through his political managers (and by apparent Japanese influence), is at this hour seeking to prolong his official tenure in power beyond the lawful period by emasculation of the Constitution. And he is doing this in violation of his preelection pledges to the people who entrusted him with a single 6-year term in office. In a word, he is following in the well-trodden path of the dictators of the Old World.

5. Because the foremost interests which he serves are not those of his native land but foreign capitalistic and militaristic interests seeking control of the Philippines for their own aggrandizement. The people of the Philippines are the pawns and their lands are to be the recruiting ground for foreign exploitation—as was the case before the United States came to their rescue.

6. Because the Quezon administration, through collaboration with foreign aggressive interests, threatens by gradual monopoly of all governmental powers, eventually to so entangle the Philippines in the foreign network, that the only way for escape is war, and a war of national suicide. How long would our long-sought Philippine independence last after the guns of the battleships from the north hove in sight on Manila Bay?

7. Because one more term of Quezon would cost us the loss of our one great friend—the United States—which in 1898 saved us from Spanish barbarous and despotic rule and, during the past 40 years, has expended $800,000,000 for our economic development, roads and bridges, sanitation and education, and all that goes to embellish civilized life.

8. Because the Quezon administration is on closer terms with the Government of Fascist-Nazi Japan than with the patriots of our own people and is working harder for the capitalistic foreign monopolists than for the workers in our fields and the people in our homes. Where does Quezon go when he is photographed at a state banquet—to the Filipino homes or to a palace in Tokyo?

9. Because Quezon's appointee to the high position of Resident Commissioner in the Congress of the United States, in the person of Spaniard Joaquin "Mike" Elizalde, who is not a Filipino, but a capitalist from the royalty period of Spain; who actually served 5 years in the Spanish Army; a man who has a corporate interest in a good share of the monopolies which rob the Filipino producer and workingman. Why can we not have a Resident Commissioner devoted to the rights and interests of our country, a Filipino patriot like the veteran General Aguinaldo? Why? Because Quezon is on the job. And he proposes to extend his control of that job—even if he has to override or emasculate our constitution.

10. Because Quezon is so blind to patriotic service and so deaf to the appeal of patriotic duty that he has moved to abolish the pension of Gen. Emilio Aguinaldo and other Spanish-American war veterans opposed to the Quezon administration. He abolishes the pensions of Filipino veterans and extends special privileges to the foreign monopolists and Japan.

11. Because the Quezon administration and the so-called Quezon national assembly is filled with pro-Japanese officeholders and attorneys and agents of Japanese landlords and commercial interests. Quezon, himself, is too closely associated with the Japanese, and even Quezon's secretary and his chief of staff, his appointees to departments, and a dozen at least of his assemblymen working in his interest, are known to have Japanese affiliations. A New York Times correspondent reports that "three-fourths of the members of the Philippine National Assembly are on the books of Mitsui, O. S. K., Furakwaa, and other big Japanese credit-extending companies, as 'legal counsel.'"

12. Finally, because further extension of the Quezon bureaucracy in dictatorial power, like that of the pro-Spanish Fascist-Nazist powers abroad, points to the day when the people of the Philippines may be without power in their own native land—without power and

without inalienable rights in their own country. They will be peon subjects of capitalist and militarist powers under foreign flags. What then will be the destiny of Philippine independence? The first step in government for true Philippine independence is, get rid of Quezon. And the second step is, put out of office the Quezon gang.

A few weeks ago, at the hearings in the United States Senate, one of the stanchest friends of Philippine independence, Senator WILLIAM H. KING, who has worked 20 years in the Philippine cause, made this statement concerning the present situation in Asia and the Philippines—a statement that all thinking readers know to be conservative:

"At that time (when the Independence Act passed the Senate in 1934) some of us believed—I among the number—that Japan was entering upon a democratic development. I was mistaken. She has demonstrated that she seeks dictatorial authority. She seeks the conquest not only of China but perhaps of the Orient."

And the footstool of Japanese dictatorship of the Philippines is the Quezon administration. Quezon, as shown by his official appointments, his legislative measures, his visits back and forth between Manila and Tokyo, and between Manila and Berlin, has demonstrated to the profound conviction of those who have followed his steps, that he is the monkey for pulling Japanese, Spanish, and Nazi chestnuts out of the fire. What else could he have done, that he has not done, to advance the interests of a foreign dictatorship over the Filipino people?

If his political regime is not part and parcel of the Spanish-Japanese entente, why is it that the Quezon assembly is aiding Japanese immigration and landowning in the Philippines, so that the Emperor of Japan may at an early date follow the example of Hitler and take over the country held by its nationals? Quezon and his organization are in effect making Luzon and Mindanao a "Sudetenland" for the Asiatic Hitler of the north—the Emperor of Japan.

Why is it that all of the iron ore and most of the manganese, coal, and chromium of Mindanao go to Japan? Why is it that the 20,000 Japs of Davao Province own 70 percent of the land and abaca production? Why is it that 95 percent even of Davao's exports to the United States are handled by Japanese commercial agents? Why is it that 70,000 Davao natives are dependent upon Jap enterprises?

Moreover, why is it that the Quezon assembly has such Japanese-minded representatives as the following people of known affiliation with Japanese enterprises; for example:

Assemblyman Juan T. Alano, of Davao (70 percent Jap control).

Judge Benito Natividad, of Davao (Jap "Sudetenland").

Assemblyman Maximo Kalaw (president, Japanese-Philippine Society).

Ex-Assemblyman Romualdo Quiempo, of Davao (Japanese land interest).

Ex-Governor Sarinas, of the Davao Japanese Province.

Assemblyman Pedro Sabido, attorney for Jap interests.

Quezon's Secretary Vargas, associated with Jap lumber interest.

(Secretary Vargas also acts as head of the Commonwealth of the Philippines when President Quezon is abroad, disregarding constitutional powers and rights of Vice President Osmena to hold the position as acting President in the absence of the President, usually recognized in a democratic government, particularly with the present set-up of the Tydings-McDuffie Act.)

The Davao-Japanese scandal reached the point that High Commissioner McNutt held an investigation of the land-lease scandal involving rich Japanese landholders.

Also, consider the appointment of Spaniard Joaquin "Mike" Elizalde, making the Philippines safe and powerful for the Spanish interests, competing with the best interests of the Filipino people.

The Philippine Civic Union pictures the Philippine plight under the Quezon regime with the following graphic symbol: "The Philippines—for Japan?"

There is yet another phase of the Philippine-Japanese struggle that is full of near-future complications. The Sino-Japanese conflict in its monthly broadening radius of activity may yet develop until the Filipino finds it not a foreign issue but an internal racial issue.

The Quezon administration reports no census of population statistics showing the comparative number of Japanese and Chinese and Filipinos for the Philippines up to date. Officially the population is around 12,000,000, although a complete census is likely to extend that figure to 18,000,000.

This much is known, however, regarding Japanese and Chinese industrial and commercial control. Of the two great industries, abaca and rice, the Japanese control the abaca industry, one of the chief sources of income from commerce, and the Chinese control the rice industry, which is the chief source of food. Both Japanese and Chinese are large factors in all minor local industries.

Though Filipinos constitute the majority of the rice farmers, 75 percent of the 200 rice mills that mill and market the bulk of the crop are owned by the Chinese, just as 70 percent of the abaca (manila hemp) industry is controlled by the Japanese and Spaniards.

The Philippines themselves, therefore, have all the "makings" for a Sino-Japanese contest within their own boundaries. One of the reasons why the Japanese Government is so anxious to extend the power of Quezon, and by a controlled "plebiscite" hasten the day of so-called "independence" is undoubtedly in order, as quickly as may be, Japanese sovereignty over the Chinese may be demonstrated in the Philippines.

The visits of Quezon to Berlin and Tokyo, and the recent return visit of a German official party stopping at Manila on its way to Tokyo, may be the educational preliminaries in order that Dictator Quezon may handle the Japanese "Sudeten" cases as wisely and efficiently as even Adolph Hitler.

If the Japanese follow their Asiatic mainland policy in "cracking down" on the Chinese of the Philippines, the Filipino people may yet see, if they extend the power of Quezon, that their main food crop, rice, has passed under the control of Japan.

Japanese encroachment, under the helpful auspices of Quezon, already extends in the following fields of national development—Japanese immigration, Japanese commercial and banking enterprise, Japanese industrial and shipping control, and, above all, Japanese political and governmental control. All that Japan now needs is food control of the Philippines, and Japanese domination over the Chinese may be the major step to that end.

Therefore, I repeat: There is no hope for Philippine independence until the Filipino people wake up to the realities—and get rid of Quezon.

In view of the above, we feel justified in asking the Members of Congress to vote "yes" to H. Res. 198.

Views of Gov. A. Harry Moore, of New Jersey, On an Ideal W. P. A. Program

EXTENSION OF REMARKS

OF

HON. EDWARD J. HART

OF NEW JERSEY

IN THE HOUSE OF REPRESENTATIVES

Monday, July 10, 1939

LETTER FROM HON. A. HARRY MOORE, GOVERNOR OF NEW JERSEY

Mr. HART. Mr. Speaker, on June 7, 1939, Hon. A. Harry Moore, Governor of New Jersey, addressed a letter to Hon. EDWARD T. TAYLOR, chairman of the House Committee on Appropriations, setting forth his views of the chief essentials of an ideal W. P. A. program.

Governor Moore is the first man in all the long history of New Jersey to have been selected by its people as their Governor for the third time. He has directed the affairs of the State both in prosperous times and in times of depression. No man in the United States is better qualified to discuss the difficulties facing the States during these parlous days and what relationships should exist between the States and the Federal Government with the larger view in mind of the welfare of the people of the States.

Because of his ability and experience and his wide knowledge of the problem involved, I submit herewith the letter above referred to:

STATE HOUSE,
Trenton, N. J., June 7, 1939.

Hon. EDWARD T. TAYLOR,
Chairman, Committee on Appropriations,
House of Representatives, Washington, D. C.

MY DEAR CONGRESSMAN TAYLOR: As I said I would in my telegram of May 15, I have prepared my views in respect to the W. P. A. and the participation of the Federal Government in providing jobs for the unemployed on the basis of our experience with the work program and with the problems it is intended to solve.

To summarize at once, I should say these are the chief essentials of an ideal W. P. A. program:

(1) It should provide employment for all of the needy and employable unemployed—not just part of them.

(2) It should apply a needs test periodically to be sure that none but needy unemployed is given work.

(3) It should accept only those projects, among all proposed, which constitute the greatest possible asset to the greatest possible number of persons.

(4) It should provide for sponsors' contributions within the limit of what sponsors can afford to pay, and

(5) It should provide that a schedule of expenditure and employment, once launched, shall not be jeopardized by changing Federal regulation and policy.

I do not contend that your committee can devise a program perfect in all these particulars as easily as I and other Governors may advocate it; but I do sincerely recommend that you test each clause proposed in work-relief legislation by asking whether it would contribute toward such a program as I have outlined.

I shall discuss separately the essentials I have enumerated.

All-inclusive employment: Such a program is fully justified in our Federal policy. This administration has contended throughout its incumbency that national unemployment, caused by a national catastrophe, is a national problem—not the problem of any political

subdivision. But the Federal Government has never assumed and is not now assuming this readily admitted obligation. The W. P. A. in New Jersey employs about 80,000 of our 120,000 needy employables, representing family units comprising 436,800 persons, leaving the other 40,000 to be cared for by the State and the municipalities.

This lag exercises an ill effect upon State and municipal governments, upon industry, and finally upon national welfare. These 40,000 persons cause an undue strain upon the finances of the State and the municipalities, already overburdened with direct relief, unemployment compensation, widows' pensions, and similar subsistence payments. Being unsalaried, they are nonpurchasers, to the detriment of industry and consequently to the detriment of a nation whose economic welfare depends upon industry's capacity to recover in a measure, then employ and pay, then sell to persons paid. Industry cannot achieve this first step toward recovery without buyers, and persons on direct relief are hardly buyers. Until it achieves a first stride toward recovery, industry cannot employ and pay, and until it employs and pays it can have no market to sell to.

I therefore recommend a W. P. A. program which really cares for the persons it should care for, according to a clearly pronounced and nationally approved Federal policy.

Periodical needs tests—on first glance it would appear that an all-inclusive employment program is a means of keeping as many persons as possible on relief, and that recurring needs tests are a means of keeping as many as possible off relief, so that to ask for both would seem contradictory.

There is actually no contradiction involved. Putting all needy employables on the pay rolls now is the best way to get them off eventually; it helps to create a place for them in industry. Keeping persons who are not needy off the W. P. A. pay rolls helps greatly toward putting on all those who are needy.

The needs test lately applied took 2,016 persons off the W. P. A. here. Under an all-inclusive employment program this would take 40,000 cases, representing family units comprising 128,000 persons, off direct relief; put them on the W. P. A. and make purchasers useful to industry of them, relieving the State and the municipalities from paying able persons to do nothing, and at the same time benefit industry. This appears to me to be definitely worth while.

Strict review of projects: Just as we should get all the relief benefit possible out of work relief, so should we get all the material wealth out of it that is possible. It is not enough that a project should create something useful; it should create that which, among many possibilities, will be most useful to most persons.

This implies no criticism of the municipalities, which sponsor the bulk of our projects or the W. P. A., which carries out the work. Both do remarkably well, considering the hindrances to better selection of projects.

Chief among these hindrances is a lack of machinery for encouraging cooperative sponsorship among municipalities. Where town borders town, as they do throughout the suburban East, there is as much need to create or improve jointly used facilities, such as community sewage systems, consolidated school buildings, through highways, miles of beach, fronting many towns, etc., as there is to create or improve separately used facilities.

It is obvious that in such joint undertakings there must be a central authority, and it is natural that each municipality should insist upon exercising that authority if it is to take part in the project. Consequently, many joint projects, superior in every respect, are discarded in favor of less beneficial undertakings simply because these may be sponsored by a single municipality.

To remedy this I suggest that the W. P. A. be empowered to cooperate with a State W. P. A. authority designed to facilitate joint projects.

Adjusted sponsors' contributions: Advocates of higher sponsors' contribution to work relief argue that the Federal Government cannot spend at its present rate without exceeding its legal debt limit or establishing higher limitation by act of Congress. They reason against such spending as if we had but to choose whether to spend or not to spend. Actually, no such easy choice is open to us. We shall spend of necessity, and even overexpend, so long as the life of our people depends upon it. The actual question is whether the Federal Government or the separate States shall overexpend.

In my opinion it is better for the Federal Government to overexpend, creating one financial problem to be solved by national action and with the whole national resources, than for the 48 States to overexpend, creating 48 financial problems, each to vex a Federal Government that has neither power nor precedent to apply a uniform solution, nor to bring the whole national resources to bear.

The Federal Government, having tapped almost every source of taxation, leaves the States no alternative but to pyramid tax upon tax.

Uninterrupted employment program: It appears to me desirable that a sponsoring agency should feel reasonably certain, once its program is approved by the W. P. A., that change without notice shall not cancel this approval. It is understandable that an organization so vast and new as the W. P. A. should, during its first years, have to experiment a great deal with procedures, but many of us hope that after 4 years of experience in Federal work relief the W. P. A. will be able to proceed more smoothly than it has in the past. Government, also, could do with a little confidence.

Sincerely yours,

A. HARRY MOORE, *Governor.*

H. R. 4331—Binderup-Voorhis Monetary Control Bill Explained

EXTENSION OF REMARKS

OF

HON. CHARLES H. LEAVY

OF WASHINGTON

IN THE HOUSE OF REPRESENTATIVES

Monday, July 10, 1939

ARTICLE BY WILLIAM T. FAULKNER

Mr. LEAVY. Mr. Speaker, under leave to extend my remarks, I am placing in the RECORD an article written by William T. Faulkner in reply to Miss Gertrude M. Coogan's criticisms of H. R. 4931, known as the Binderup-Voorhis Monetary Control Act, which act is based on the 100-percent reserves for demand deposits, as advocated and outlined by Dr. Irving Fisher, one of the world's greatest monetary authorities. The article follows:

As one follows the gyrations of the money question through its many ramifications it becomes more and more apparent why no real and effective remedial legislation is possible of enactment. No sooner does one self-styled "monetary expert" publish his views, and a proposed solution, than another equally able authority starts shooting the proposal full of holes. What possible hope can exist in the minds of men for a satisfactory solution of this fundamental question until these experts get together and agree on a common working basis and then all pull together for the same program? Is it any matter for wonder that conscientious Congressmen who have not made any detailed study of this question refuse to act in any way when they are confronted, with such a diversity of ideas among those they feel should know something about the subject?

On March 10, 1939, Congressman VOORHIS introduced a bill in the House, H. R. 4931, known as the Binderup-Voorhis Monetary Control Act of 1939, which was referred to the Committee on Banking and Currency. This bill is practically a rewrite of a bill which ex-Congressman Binderup had in the Seventy-fifth Congress and, on the whole, has evoked the acclaim and active support of most monetary-reform students. Very few perfect bills have ever been enacted, practically every original act has been amended, some many times, to meet unforeseeable conditions and it is very doubtful if the sponsors of H. R. 4931 ever felt that this bill would prove 100 percent satisfactory. However, its enactment would certainly be a step in the right direction and would place the control of money, its issuance and regulation, in the hands of Congress where the Constitution (art. I, sec. 8) says it shall reside.

The first adverse comment on H. R. 4931 which the writer has seen was offered by an eminent monetary reform student, Miss Gertrude M. Coogan, in Central Northwest Topics, of June 1 and June 8, 1939. In her analysis of the bill, Miss Coogan states that it does not "provide for resumption by Congress of the power to coin money, regulate the value thereof, and of foreign coin." Section 6 (a) of the bill says, "The Board is hereby authorized and directed to use any or all of its powers to bring about and maintain full employment and a stable buying power in the dollar." Section 6 (b) authorizes and directs the Board to purchase with lawful money "direct or guaranteed obligations of the United States" and continue this policy "until such time as a condition of practically full employment has been attained or until the buying power of the dollar has been restored to the average level held by it in the year 1926." Section 6 (c) provides that when the objectives named in section 6 (b) have been attained the Board shall "use any or all of its powers to maintain" those conditions. Section 6 (d) orders the Board to promptly notify the Congress and the President "with recommendations for appropriate legislation" if it ever finds its powers are insufficient to fulfill its mandate. Section 7 provides for a sufficient flow of new lawful money to maintain "the productive capacity of industry, agriculture, and commerce," in an expanding population and, in the event of threatened undue inflation the Board is mandated to sell United States obligations in sufficient amounts to absorb any surplus floating funds. Does Miss Coogan expect the Congress to sit as a committee of the whole every day in the year and thus "regulate and coin" our money? Or, is it just as effective to have a Board operating under mandate perform those functions? What more can the Congress do to "coin money and regulate the value thereof" than is provided for above?

Miss Coogan says the bill "does not end the existing dependence of the United States upon a privately created and destroyed bank credit." Section 1 provides that the Secretary of the Treasury purchase the Federal Reserve System of banks, lock, stock, and barrel, "it being the intention of this act to vest in the Government of the United States the absolute, complete, and unconditional ownership of the said Federal Reserve banks" and further, all earnings of the Federal Reserve banks "shall be paid into the

general fund of the Treasury." Would there be anything private about such a set-up?

Miss Coogan says: "It does not provide a dependable medium of exchange not based on debt." Section 2 (a) of the bill says: "The Board of Governors of the Federal Reserve System is hereby constituted the monetary agent of the Congress of the United States to regulate the value of the money of the United States in accordance with article I, section 8, of the Constitution of the United States, and for this purpose the Board shall have sole power to issue all lawful money of the United States." The bill does not say that the money issued by the Board must be backed by bonds, gold, or silver to be lawful. In the absence of such a mandate any money issued by the Board would be lawful money within the full meaning of the Constitution and would have the credit of the entire Nation back of it. By what stretch of the imagination would such money be "based on debt"? It would be exactly similar to the greenbacks issued by Lincoln, still in circulation, and to which Miss Coogan refers in her article of June 8.

Miss Coogan says, "It does not get rid of the Federal Reserve Act or System or the National Bank Act." Yet section 8 of the bill states: "All laws or parts of laws in conflict with this act are hereby repealed." Could language be clearer or more explicit? Or is Miss Coogan objecting because the Binderup-Voorhis bill retains the name, machinery, and physical plant of the present Federal Reserve System of banks? In her book, Money Creators, Miss Coogan makes the point that the present system is Federal in name only; enactment of this bill would make it Federal in fact as well as in name.

The bill does not contain any implication to the effect that either gold or silver has any "unit of value" in our domestic economy. It does provide in section 2 (j) that "the Board shall purchase at a price to be from time to time fixed by it any or all gold which may be offered in the domestic market." Also, "The Board may purchase or sell gold, silver, foreign exchange, and/or obligations of foreign governments (as it may deem necessary) to promote stability in the buying power of the dollar, to protect foreign commerce against the adverse effect of depreciated foreign currency, and/or to carry out the purposes of this act." This section continues with detailed instructions on the use of gold and silver in international transactions only and closes with the clause: "All laws or parts of laws in conflict with this subsection are hereby repealed." Until gold and silver are formally abandoned (as they probably will be before very long) by nations as a medium for settling international balances, and we revert to international barter (as some nations are already doing because we have their gold) gold will continue to be used for this purpose. Should this bill be enacted, all further use for the stabilization fund will be eliminated. Its functions would be taken over by the Board.

It is rather difficult to ascertain Miss Coogan's point that this bill does not attack the present stagnation in investment of private capital. It would be rather interesting to learn just how the Congress could constitutionally mandate the investment of private capital. Private capital is stagnant today because its owners are too much afraid of future Federal tax legislation.

American farmers are losing their home markets because of our "good neighbor" reciprocal trade treaties, which are being drawn in favor of our munitions makers and mass-production industries at the expense of our agricultural producers and not because of "adverse foreign exchange ratios." Having a monopoly on the world's monetary gold, we can only "sell as we buy," and our farmers are being offered up as a national sacrifice on the altars of big international business and good neighborliness.

Miss Coogan says this bill "does not take away from local banks the power to create bank credit as loans to Government and to 'buy' Government bonds with their bookkeeping entries," yet section 3 states that within 1 year after the passage of the act all commercial banks shall place their "demand" deposits on a 100-percent basis, hold such deposits in trust for the depositors, but that banks having a part of such deposits invested in Government obligations 3 months after the bill is enacted may continue these investments, but not increase them after that date. It is further provided that the Federal Reserve shall redeem such obligations at not less than par, as the owning bank may elect at any time. The Federal Reserve System, under this act, would be an instrument of Government under the direct control of the Congress. It would, itself, buy with lawful money any Government obligations offered for sale, and all profits accruing would revert to the United States Treasury.

The bill provides that any member, excepting the ex officio member, may be removed at any time by the passage of an appropriate resolution by the Senate and House of Representatives. Yet Miss Coogan says the House has absolutely no control over the acts of the Board. The power to remove any or all members at any time would certainly indicate to this writer that the Congress, including the House, retains at all times absolute control over the acts of the Board.

The bill contains no provisions empowering the President to order the Board to do anything, Miss Coogan's assertion to the contrary notwithstanding. The Board itself is empowered to set the price from time to time, which it will pay for gold and silver; this is an unlimited power and may be set so low as to absolutely discourage future offerings. The same provisions obtain with respect to the purchase and sale of foreign obligations, so here the President is in no position to order any transaction.

Miss Coogan says: "The decisions of the Board * * * shall be absolute and final." Let's see just what those asterisks stand for: The bill says, "The decisions of the Board as to all questions relating to the purchase and sale of foreign exchange and the exchange of currency for gold or silver in such international transactions shall be absolute and final." Is there any intended misleading impression here? Surely no Board member is going to jeopardize his job and reputation by committing any act which would likely cause his removal by Congress. Decisions affecting international trade change from day to day and, under certain conditions, from hour to hour; who would or could more logically than the Board make these decisions?

The banking business, like all big business, is now conducted on a national scale; State boundaries mean no more to any bank than they do to our communications systems. Is there any good reason why it should not be subject to Federal regulation? Under this bill, should any bank be so foolish as to voluntarily restrain its activities to an intrastate basis it would not long remain in the banking field. The courts would soon settle any argument on the constitutionality of this line.

Section 3 (c) does not prohibit private capital from engaging in banking in the future, should this bill be enacted. This section provides that at the expiration of 1 year any bank whose demand deposits are not on a 100-percent basis may sell to the Reconstruction Finance Corporation "so much of its other assets as may be necessary" to place it on a 100-percent basis or "such bank may at its discretion" increase its capital stock and sell this new stock to the R. F. C. There is nothing to prevent it from selling this new stock to any private investor who is willing to buy it.

Section 3 (f) says: "The Board shall establish and enforce uniform rules and regulations for the withdrawals by depositors from funds from the savings- and time-deposit departments of all banks subject to its jurisdiction." Did Miss Coogan ever hear of anyone being obliged to wait 30 days for their money from a savings bank under our present set-up? All such banks reserve this right and all have exercised it at one time or another. And does she know of anyone who would have more than they possess today had they been obliged to wait a few days to think a proposition over before making a withdrawal on the spur of the moment? Yet she comments adversely on this point.

If Miss Coogan does not believe the Federal Deposit Insurance Corporation is a stabilizing influence in the banking world of this country today, and she evidently does not, that is her opinion, which she has a perfect right to entertain, but it does not seem quite fair for her to leave an entirely false and erroneous impression regarding the provisions of this bill with respect to the bank-examining functions of the F. D. I. C as provided. The bill says only that the F. D. I. C. shall act as an agent of the Board "under such rules and procedure as the Board may prescribe to examine all insured banks without charge. Banks thus examined shall not be subject to examination by any other Federal agency." Is there any prohibition here of State examining boards? Yet Miss Coogan says: "When did the Constitution grant the Federal Government power to take away from each of the 48 States the right to examine any and all corporations chartered under its laws?" Any banker in the country, regardless of his feelings toward this particular bill, would frankly admit that today he is about examined into extinction and would gladly welcome this provision, which would subject him to the trials and tribulations of only one Federal examining agency.

Enough has been covered already to show that, for some reason, Miss Coogan has an ax to grind. It would be most interesting to know just what her object was in publishing such false and misleading propaganda about H. R. 4931. The remainder of her articles are replete with half truths and false impressions similar to those uncovered above. Any interested individual can easily satisfy himself as to the terms of this bill by writing to his Representative for a copy.

Until the question of the supply of our money and credit is properly and sanely settled we are destined to continue to see millions of our unhappy citizens on the dole or tramping the streets vainly looking for work; destined to ever-increasing debt and taxation to care for the ever-increasing army of unemployed; and it is the foul soil of this want in the midst of plenty where flourish all those un-American "isms" so rampant in the country today. This is the thing Americans have to fear. Let us who are interested in this question unite on a few necessary fundamental changes and then fight for their enactment instead of lurking in the shadows with a brick in our hand ready to soak the first one who pops up with a constructive measure.

Have Faith in America

EXTENSION OF REMARKS

OF

HON. HAMILTON FISH

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Monday, July 10, 1939

RADIO ADDRESS OF HON. HAMILTON FISH, OF NEW YORK, ON JULY 8, 1939

Mr. FISH. Mr. Speaker, under leave granted me to extend my remarks in the RECORD, I include the following speech

delivered by me over the National Broadcasting Co.'s network, Saturday evening, July 8, 1939:

The three greatest issues in America today are the preservation of our representative and republican form of government, the restoration of confidence and reemployment of our wage earners, and keeping America out of foreign wars.

The immortal Declaration of Independence, written by that great Democrat, Thomas Jefferson, was a mere scrap of paper until George Washington, by his leadership, courage, determination, and faith, translated it into a governmental actuality—our republican and constitutional form of government, the oldest single continuous form of government in the world today.

As the Old World nations go to the right and to the left into dictatorships and despotism, such as fascism, nazi-ism, or communism our free institutions are still the hope and aspiration of the struggling masses of mankind, whether they be in Germany, Italy, Soviet Russia, or Japan.

We are only in the morning of our glorious destiny and will emerge from the depression in spite of the New Deal policies of collectivism, radicalism, and internationalism to greater opportunities and more prosperous times. We must remain steadfast to those sound American principles of government established by Washington and Jefferson and upheld by Jackson, Lincoln, and all our Presidents until recent years.

We must not be led astray by false prophets or would-be dictators into emulating the political, economic, and social idealogies of the Old World despotisms. Europe is bankrupt, its socialized economy has broken down and with it has gone free enterprise, free institutions, and personal liberty.

We must devote our energies to combating the spread of these false political doctrines and economic fallacies in free America. There can be no compromise with the spread of alien propaganda and "isms" aimed to undermine and destroy our American system of government.

If there is any country worth living in today it is the United States of America. Our answer to the dictators is to make democracy work at home by putting our own house in order and providing jobs for our army of 12,000,000 unemployed.

The American flag is the flag of tolerance, not bigotry; of freedom, not oppression; of liberty, not dictatorship; of a free ballot under free institutions and by a free people, and not a government of the bullet, force and violence and the bread ticket. Our flag is the symbol of freedom, justice, democracy, and peace, and we must keep it so.

The foundation and rock upon which our free institutions and American liberties are based is that of freedom of speech, whether in the press, forum, or over the radio. Any attempt to restrict the right of freedom of speech is a menace to popular government and to democratic institutions. Censorship of the press or control over the radio would establish a precedent that would endanger American liberties, promote intolerance, and, ultimately, set up an American dictatorship.

I subscribe to the sentiment expressed by Voltaire, when he said, "I disapprove of what you say, but I shall defend with my life your right to say it." The attempt to censor or restrict the right of Father Coughlin to speak over the radio, regardless of the merits or demerits of his views, is, in my opinion, an act of intolerance and an utterly un-American procedure. If the administration or any opposition groups can keep critics off the radio then we have reached the end of government by the people and of free institutions in America. Dictatorships of the left, such as communism, and of the right, like fascism and nazi-ism, have already done away with freedom of speech. Let us not follow this example in the United States. The constitutional right of freedom of speech on both national and international issues must be upheld or otherwise we will have a dictatorship and the right of minority groups and legislative and party minorities will be destroyed.

I am convinced that the do-nothing-but-spend Congress will adjourn within 2 weeks, and that the Bloom "unneutrality" bill is headed for the scrap heap and oblivion. For sake of good measure, and to make assurance doubly sure, I urge the radio audience to take up their pens and pencils and write or wire their Senators not to vote for any neutrality bill without an arms embargo. A neutrality bill without an arms embargo is like a bad egg, or even a partially bad one, good for nothing.

There must be no surrender by the Senate against the ban on the sale and shipment of arms and ammunition to warring nations for blood money and war profits, or the youth of America will soon follow this immoral and un-Christian traffic in deadly weapons to bloody battlefields all over the world. Are we a peace-loving, Christian Nation or not?

If my remarks over the radio reach the people in the great Middle Western State of Iowa, and far western State of Montana, I hope they will respond to my Macedonian cry and wire or air-mail their Senators to do their part in keeping America out of foreign wars by voting not to bring up the Bloom bill at this session of Congress.

I believe in the right of the people to petition, and advise their Representatives and Senators, particularly on an arms embargo that may drag us into war and affect the lives of millions of our youth. This is democracy in action, and a good American doctrine that is part and parcel of popular government, or government by the consent of the governed.

The time for the people to speak out to their Senators is now, and not after some interventionist war-making bill is forced upon us by the Moscow-Bullitt-Bloom-Roosevelt axis.

As God is my judge, and because I love peace, democracy, and America, I am opposed to any neutrality bill without an embargo on arms, ammunition, and deadly weapons. I am convinced such legislation would mean that the United States of America would follow our arms traffic for blood money and war profits into the next war.

Who is asking us to do away with this arms embargo? Has the American Federation of Labor and the wage earners of this country asked us to wipe out the arms embargo? Have the farmers or the National Grange asked us to do away with the arms embargo? Have the veterans who followed the arms traffic into war in 1917 opposed the arms embargo? Have the church people and the rank and file of the peace-loving people of America manifested any desire to repeal the arms embargo? Ninety percent of all these groups want an embargo on arms. The main ones who have asked to do away with all arms embargoes are the President of the United States, the Secretary of State, and the entire Communist Party and Communist press.

You can almost hear the beating of the wings of the angel of death as she hovers over England, France, Germany, Italy, and Poland. They are on the verge of war. Yet the President proposes that Congress pass a law without an arms embargo, which will put us exactly where we were 22 years ago and launch us into another world war.

I have only one concern, and that is the interest of my own people and my own country. I want to do everything I can to keep America out of war and prevent the sending of American soldiers to be slaughtered on the battlefields of Europe.

The American people do not trust President Roosevelt on account of his interventionist views, and do not agree with him that our participation in another world war is a "virtual certainty." The Congress is determined to exert its constitutional prerogative to keep America out of foreign wars unless we are attacked.

The continued pressure on the Congress by the President to obtain greater interventionist powers to police and quarantine the world with American blood and treasure ought not to have any more effect on the Senate than it did on the House of Representatives. The Congress does not propose to permit President Roosevelt to usurp its constitutional power to declare war by entering into entangling alliances with any group of nations.

The American people went to war once to oust the Kaiser and opened the way for Hitler, and are not disposed to send our soldiers to throw out Hitler and establish communism in Germany, Italy, and all over Europe.

If we must go to war, let it be in defense of America, but not in defense of the munitions makers, war profiteers, Communists, to cover up the failures of the New Deal, or to provide an alibi for a third term.

It will make no difference, except as to the date of adjournment of the Congress, what action the Senate takes on the arms embargo adopted by a majority of 41 votes in the House. The House acted deliberately, after 5 days of debate on the Bloom bill, and is in no mood to compromise. In fact, there can be no compromise on such an issue as keeping America out of foreign wars. It is a great American issue, transcending all party lines, as evidenced by the votes of 61 Democratic Members of the House in favor of an arms embargo in spite of terrific pressure from the White House.

I am confident that the House will insist on an arms embargo by an increased vote in case the Senate yields to the demands of President Roosevelt to kill the arms embargo.

The American people do not want to take any chances of being jockeyed or eased into imperialistic wars by President Roosevelt, British or Communist propaganda, the internationalists and adherents of the League of Nations, or by interested groups, or war profiteers.

I give you of the radio audience another Macedonian cry of help to sustain the efforts and activities of the National Committee to Keep America Out of Foreign Wars by sending a contribution to Walter L. Reynolds, treasurer, House Office Building, Washington, D. C. Funds are urgently needed to extend our activities in every section of the country and to combat the war hysteria, hatred, emotionalism, and poisonous propaganda that seeks to involve America in foreign entanglements and the eternal wars of Europe.

With the threat of the Bloom bill and the increased New Deal war propaganda which will immediately follow the adjournment of the Congress, it is essential that the national committee continue its program and extend its activities to offset this war propaganda from whatever source and keep America out of foreign wars.

In conclusion, I take this opportunity to answer the inspired statements from New Deal sources and from the international-minded and interventionist press of the eastern seaboard cities, regarding the reactions in Germany, Italy, France, and England over the decisive vote in the House of Representatives in favor of an embargo on arms, ammunition, and deadly weapons.

The House by its vote sought to keep us out of world wars, and is not concerned with what Hitler, Mussolini, Chamberlain, or the French Foreign Office thinks or says. It is none of our business what form of government exists in any foreign country, whether it is fascism in Italy, nazi-ism in Germany, or communism in Soviet Russia, and by the same token it is none of their business what form of government we have in the United States of America.

It is well for all nations to know that we do not propose to go to war over Danzig, power politics, foreign colonies, or the imperialistic wars of Europe or anywhere in the world.

Let us mind our own business, put our own house in order, uphold our own free institutions and republican form of government, have faith in America, and keep out of all foreign wars.

The Road to War

EXTENSION OF REMARKS
OF
HON. CLARENCE J. McLEOD
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Thursday, June 29, 1939

Mr. McLEOD. Mr. Speaker, this Congress has before it a bill which masquerades under the name of neutrality. It is a name that appeals to the American people because the word expresses the historic attitude of this Nation when conflicts and wars disturb other countries.

But to apply that word to this measure is to belie its very meaning. To adopt this measure is to forsake our historic policy of neutrality. To adopt it is to open a breach in the policy which has made and preserved this country. To adopt it is to open wide the gates of war and to march this Nation's youth once more to the fields of carnage.

Instead of going by the misnomer "neutrality" this bill should be labeled what it is—a bill to create a condition which will serve as an excuse for the sacrifice of our people in the quarrels of others.

By the passage of this act Congress would create in our own Nation the identical conditions which, by their existence in other countries, are forcing those countries into war. If this Congress should be so short-sighted as to enact the measure it would simply be writing out an undated check for the next war—a check to be paid not only in money but to be paid in the lives of our people.

I am confident that the Congress, having had sufficiently sorrowful experiences with blank checks does not now want to start writing undated checks, checks that can be paid only by horrible suffering on the part of all our people.

The duty imposed on Congress by the Constitution, which is also the right of the people as represented in the Congress, to declare war goes far beyond the mere matter of the resolution which finally places us in a belligerent status.

That right to declare war imposes upon us the duty of trying to prevent war. It imposes upon us the duty of participating actively in the preparation for war and imposes upon us the further duty of avoiding those conditions which might lead to a needless or an unjust war.

This measure, if enacted, would yield our duty of avoiding those conditions. It would in itself be an invitation to the creation of those conditions. In itself it binds up all of the steps leading to those conditions. It would carry us to the brink of the resolution declaring war without giving Congress an opportunity to consider or participate in those steps.

There is a physical condition of neutrality and there is a mental condition of neutrality. We cannot have actual neutrality unless we are so minded. And those who have conceived this bill are not neutrality-minded.

There is no secret here and it should not be a secret from our people that this so-called neutrality bill is not conceived in minds actuated by neutrality. It is born in minds that would use it, even before its enactment, as a card in the dangerous game which is being played in Europe.

Even our utterances in this debate are being heralded as giving aid to one side or another in the game of bluff and war which Europe is playing. Neutrality cannot exist except as impartiality. Yet it is openly admitted that this bill is designed to deprive us of impartiality. It is to be an important weapon on one side in the controversies already waging.

If the problem of our future neutrality were approached in a neutral spirit, in a spirit of aloofness from the quarrels which are none of our business, then it might be possible to write an effective neutrality law.

But what has been the approach that sired this legislative monstrosity? It has been the approach of openly expressed animosity on the part of our executive department. It has been an approach in which partiality for one side or another has dominated. It has been an approach of the very essence of unneutrality.

Out of such an approach does not come neutrality and peace.

Out of such an approach comes war and its broken lives, its maimed bodies, its shattered homes.

This bill would take the power over war out of the hands of the elected representatives of the people in the Congress and place it in the hands of one man. Regardless of who that man may be such a course is foreign to the spirit of our democracy.

It would create in this manner the same conditions here that exist in many countries in Europe today. Does anyone believe that we would have such serious and such constantly recurring threats of war and such outright aggression as exists were it not for the fact that some countries have forsaken the right of the people to make war and have given that power into the hands of one man?

Countries which are deliberative in their war processes do not find their armies constantly on the march. But nations which have forsaken the deliberative process find their armies at the beck and call of those whose minds see only the self-aggrandizement and glory of the conflict. They will not see, do not want to see, the dire results of such conflict upon those who must carry the burden.

This bill would set up a series of conditions which, according to the bill and its sponsors, would make for neutrality in the event of war engulfing other nations.

But not one of these conditions become operative except as the whim of one man dictates his action on finding that a state of war exists. Not one step under the act would or could be taken except as the President, without necessarily seeking any advice or counsel, would precipitate it through his action in regard to finding that a state of war exists.

And let us examine, in the light of the last few years, how this matter of determining that a state of war exists is decided.

Let us see if all wars are treated alike when one man has the power to determine for the American people if war exists.

According to American thinking, a war certainly would exist when a hostile army marches into another land and kills its inhabitants, shatters its homes, and plunders its people. But the Executive to whom we would give almost unlimited powers under this bill apparently does not think that those things constitute a war. They have been going on in China for years, have horrified the civilized world, but our Government has not been able to see that a state of war exists in the Orient.

Similarly we have had in Europe nations perpetrate acts which to any normal thinking could be nothing less than war. Yet war, according to our Executive, has not been waged.

The existence of these facts cannot be denied.

Nor can it be denied that when we confer war powers upon one man we run the danger of his being at least partially blind to the existence of war—blind to the existence of war when it pleases him not to see it, but keen-eyed when he is interested in it.

That is too vague a condition for the American people to put their trust in. It is too vague a condition for the American Congress to accept. It is too vague a condition to warrant the surrender of our historic principle of real neutrality and real impartiality.

I should like to see a Neutrality Act which would carry of itself specific authority and regulation of our commerce, our financial relations, and the general attitude and actions of our citizens with respect to belligerent countries. Such an act should definitely limit to the extent of complete curtailment all trade and financial assistance to any and all belligerents in the event of either a declared or undeclared war. I would even go so far as to provide that all passports issued for travel in countries in a state of war or endangered by war should carry the proviso that such travel is completely at the risk of the individual and his protection will not be guaranteed by this Government.

There is no question in my mind but what this is the most important and far-reaching legislation that we will be called upon to consider during this session. I have had hundreds of letters from constituents and, almost without exception,

they have urged me to vote against this so-called Bloom bill. These letters do not come from an organized minority, they come from average citizens—men and women who vividly recall the heartaches they endured during the World War; fathers and mothers who have sons now of military age, and who have no desire to see those sons called upon to participate in a foreign war. I am convinced that the citizens of the United States long years ago determined that never again should our young men be called upon to fight on a foreign battlefield.

For the reason that the Bloom bill increases the possibility of our becoming involved in a war, every Member of this House is justified in voting to defeat the measure.

The Struggle for Liberty Never Is Completely Won

EXTENSION OF REMARKS

OF

HON. BERTRAND W. GEARHART

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Monday, July 10, 1939

EDITORIAL FROM THE SACRAMENTO BEE, THE FRESNO BEE, AND THE MODESTO BEE

Mr. GEARHART. Mr. Speaker, in the July 4 issues of the Sacramento Bee, the Fresno Bee, and the Modesto Bee, McClatchy publications, appeared a most interesting and timely editorial under the significant caption of "The Struggle for Liberty is Never Completely Won." Because I believe that the editorial is quite worthy of consideration, I ask unanimous consent that it may be reprinted in the CONGRESSIONAL RECORD, as follows:

[From the Fresno Bee, the Sacramento Bee, and the Modesto Bee of July 4, 1939]

THE STRUGGLE FOR LIBERTY NEVER IS COMPLETELY WON

The one hundred and sixty-third anniversary of the signing of the Declaration of Independence is being celebrated today under conditions offering a peremptory challenge to every believer in the principles for which this outstanding human document stands.

Never since the ringing of the Liberty Bell in old Faneuil Hall announced that the Declaration had been signed have these principles been so openly disputed. Never has the need of a rededication to the belief that government should exist by, and for, and of the people been as great.

In many countries the ideals of democracy have been repudiated or are in jeopardy. Men are enunciating the dangerous doctrine that the sovereign people are not fit or capable of governing themselves.

They openly are challenging the basic tenet of the Declaration of Independence that life, liberty, and the pursuit of happiness are the fundamental rights of man; they deny that men are endowed by their Creator with certain inalienable rights; and for the right of each individual to rule his own destiny they would substitute a groveling type of totalitarianism that demands spineless obedience to the wishes of a dictator and weak-kneed subservience to an all-powerful state.

On July 3, 1776, John Adams wrote to his wife:

"I am well aware of the toil and blood and treasure that it will cost us to maintain this declaration and support and defend these States. Yet through the gloom I see rays of ravishing light and glory. I can see that the end is more than worth the means. Posterity will triumph in that day's transactions even although we should rue it."

Thus spoke a patriot willing to lay down his life that tyranny might be wiped from the earth.

And if our form of government is to survive, some means must be found of reviving this white-hot zeal for liberty—this willingness to die for a principle.

The Declaration of Independence brought a new sort of community into life. A western civilization had broken away from the last traces of absolutism and empire. It wiped out monarchy and the caste system.

It made a clean start in political thinking and practice such as never had been witnessed before. It was, as Jefferson put it, not so much an attempt to find new principles as to reaffirm old ones in common-sense language. It became, in short, an expression of the American mind.

Significantly, the signing of the Declaration of Independence was the beginning of a series of upheavals throughout the world. It marked the start of a struggle between the oppressed and the oppressors in many lands that was to last for more than a quarter of a century and to result in important gains for the underprivileged.

Thus the Declaration of Independence has been one of the great beacon lights to guide the struggling feet of the masses to greater liberty.

And because the fight for liberty and democracy never is won their defenders ever must be on their guard to strike down the skulking dragons of reaction with the shining sword of truth.

Independence Day is a challenge to every true American.

How shall we meet it?

Women and the Nation's Power

EXTENSION OF REMARKS

OF

HON. JAMES J. DAVIS

OF PENNSYLVANIA

IN THE SENATE OF THE UNITED STATES

Tuesday, July 11 (legislative day of Monday, July 10), 1939

ARTICLE BY HON. JAMES J. DAVIS, OF PENNSYLVANIA

Mr. DAVIS. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an article that I have prepared entitled "Looking to Women for the Nation's Power," published in the Philadelphia Inquirer, July 2, 1939.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

[From the Philadelphia Inquirer of July 2, 1939]

LOOKING TO WOMEN FOR NATION'S POWER

(By JAMES J. DAVIS, senior United States Senator from Pennsylvania)

"America will be as strong as her women."

Recently there has been a great deal of talk about women taking men's jobs and thereby contributing to the male unemployment problem. Such statements are due to a lack of understanding of economic and industrial conditions and trends. To realize this we have only to look back over past centuries and to analyze the many changes and developments, particularly those of the industrial revolution and its ramifications in the last hundred years of our own history.

A hundred-odd years ago women's work was literally never done. Take the wife of a small village tradesman, whose property was large enough to raise vegetables, fruit, chickens, hogs, and to keep a cow. Families were larger then; so were meals. The mother and any other ablebodied woman or girl worked hard from early morning until bedtime.

Rising at 5, for instance, a woman might start her day by milking the cow, straining and skimming the milk, and tidying up the dairy. Then, or later, the chickens had to be fed and the eggs gathered. Preparing breakfast was a task in itself. The housewife had to visit the smokehouse, the springhouse, and perhaps the preserve cellar. Families ate heartily of such items as smoked shad, ham and eggs, rump steak, cooked porridge, hot bread, pies, and cakes.

All the cooking was done at an open hearth. Heavy iron pots had to be hung from the swinging cranes. Water had to be drawn from a well or pumped. Dirty water had to be carried out. And the whole program repeated twice again before a single day's quota of meals was complete.

Throughout the day this same woman might be called on to preserve, pickle, or dry vast quantities of fruits and vegetables. When hogs or sheep were killed she would help to cut them up and salt or pickle the meat. Various drinks had to be brewed. Candles were to be dipped, butter churned, lard and soap made.

Most women living on farms and in small towns made their own clothes and those of their children without benefit of sewing machines. Often they spun the thread and wove the cloth from which these clothes were made. They also knitted socks, made curtains, sheets, and heavier bed coverings by hand, and perhaps rounded out the day by working on a sampler.

A MARKED CONTRAST

By contrasting this picture with the housework of the modern woman you can get a clear outlook on the effects of the industrial revolution and just why those who complain of women taking men's jobs are lacking in a deep knowledge of these effects. For the industrial revolution transferred most of these jobs from the home to the factory and the women followed the work.

Let us look at a typical homemaker today, the wife of a small village businessman, and so paint a companion picture to the housewife of a century or so ago. This particular housewife does her own work and she has plenty to do because her two daughters are busy at school. She gets up at 7 o'clock, having slept well on a comfortable mattress and between sheets, in the making of which women in factories have had an important share. According to the 1930 census, there were over 450,000 women employed in textile

mills (including those making hosiery and knit goods), and 3,700 women employed in mattress factories.

Here, right at the start of the modern woman's day, is a striking example of how women's work has been transferred from the home to the factory by the industrial revolution. But to return to the century-old parallel—the modern housewife has no cows to milk. She picks her milk from the porch, strained, skimmed, pasteurized, and conveniently bottled. She feeds no chickens, collects no eggs. She doesn't have to make her own clothes or those for her family, because some 350,000 other women are working in garment factories throughout the country.

Her breakfasts are smaller and much easier to prepare, because there are 116,000 women employed in food factories and canneries, in bakeries, and packing and poultry picking industries. About 10 years ago a well-known economist pointed out that the various labor-saving devices in the home were equal to about 30 servants for each individual. Naturally women workers play a large part in the manufacture of these devices. For instance, the 1930 census showed that 49,000 women work in factories making electrical products and that 34,000 more are employed in the metal industry, many of whom help in making modern stoves, vacuum cleaners, and countless other labor-saving devices for the home.

Laundry work is almost child's play compared with the old Monday washing and Tuesday ironing, because a growing number of women are working in laundries and dry-cleaning establishments—even in 1930 there were 182,000 so employed. Groceries may be had by telephone, due to some 235,000 women employees in the telephone industry. Almost any article will be delivered on order from a department store because in 1930 there were 700,000 women working as clerks and salesgirls in stores. There were 22,000 women employed in automobile factories at that same time, 115,000 working in beauty shops, 875,000 as school teachers and college professors, and almost 500,000 as domestic servants.

FOR BETTER STANDARDS

Altogether, according to the national unemployment census of November 1937, about 11,000,000 women are gainfully employed. But they were employed not because they had won the jobs from men, but because the jobs they had once done in the home had been transferred to factories by the industrial revolution.

Because of this, both the housewife and the feminine wage earner should be completely united in their efforts to win better standards for the woman worker. Just as "charity begins at home," this effort should start with the working conditions for domestics. This is particularly essential, since to date only two States have made any attempt to cover such workers by an hour or wage law.

But this same effort should spread from the home to include a definite interest in the standards that govern any feminine job. Much has been done in recent years to better labor conditions for both men and women, but as we look about us we can't help seeing that much remains to be done. The wage-hour law—that is, the Fair Labor Standards Act, which went into effect last October—provides a floor to wages and a ceiling to hours in interstate industries. This act establishes the principle of men and women in the settling of minimum rates. A progressive measure, this strikes a blow at the double-wage standard which has proved so detrimental to both men and women. The tendency to pay women lower wages than men for the same jobs leads to substitution of women for men, or pulls down men's wage standards to the lower level.

The wage-hour law stipulates that for the current year no person in the industries affected shall be paid less than 25 cents an hour or be employed more than 44 hours a week without overtime pay at time and one-half times the usual rate. After next October, no person in the industries affected may be paid less than 30 cents an hour or be employed more than 42 hours a week without overtime.

After October 1940 the 40-hour week goes into effect for these workers in intrastate industries. And, after October 1945 the minimum wages for workers in interstate industries will be 40 cents an hour. This same law provides for special industry committees which may recommend minimum rates higher than the 25 cents an hour stipulated for this year or the 30-cent rate for next year, if conditions in any industry justify such an advance. In short, a committee may recommend 40 cents an hour before 1945, but in no case may advise a minimum to exceed 40 cents an hour.

In connection with this law women have a very important role to play. They can help to develop public opinion in its favor. Women, however, must have a clear understanding of the law. They must realize that it does not apply to intrastate industries (such businesses as are conducted entirely within one State). Typical intrastate industries employing women are retail stores, laundries, hotels, restaurants, or beauty shops. Women employed in such industries cannot expect protection from the Federal Fair Labor Standards Act, because the Constitution of the United States prohibits the Federal Government from regulating industries of a definitely intrastate nature.

FURTHER SAFEGUARDS

What can be done for women in intrastate industries? Twenty-five States, the District of Columbia, and Puerto Rico now have minimum-wage laws on their statute books, but 23 have none. In regard to minimum-hour legislation, all but five States—Alabama, Florida, Indiana, Iowa, and West Virginia—have enacted a law to limit in some way the hours of women in some industries or occupations. Only 18 States, however, have set the 8-hour day combined with the 48-hour week (or less) as the maximum permitted by law.

Minimum-wage and maximum-hour legislation brings benefits not only to the workers in industry but also to the employer. When a floor is put to wages and a ceiling to hours, it safeguards the interests of progressive employers by preventing cut-throat competition on the part of those willing to overwork and underpay their employees.

Greater effort must be made also to give employment to the millions who are still unable to find it. It is a great waste of human resources for men and women to remain idle in a country which could and should make use of their energies in order to build up their purchasing power through employment. The question should not be, Are women taking men's jobs? But, How can we get jobs for both men and women? Women have always worked. Today a lot of their work has been transferred to factories. But the slogan stressed by the Women's Bureau of the United States Department of Labor still holds good, "America will be as strong as her women."

Guaranty of Bank Deposits

EXTENSION OF REMARKS

OF

HON. MILLARD E. TYDINGS

OF MARYLAND

IN THE SENATE OF THE UNITED STATES

Tuesday, July 11 (legislative day of Monday, July 10), 1939

RADIO ADDRESS BY HON. GEORGE L. RADCLIFFE, OF MARYLAND, MARCH 14, 1939

Mr. TYDINGS. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a radio address delivered over a Nation-wide hook-up by my colleague [Mr. RADCLIFFE] on March 14, 1939, on the subject Guaranty of Bank Deposits.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

In discussing the guaranty of bank deposits by the Federal Government I will comment also very briefly on certain other ideas which seem to have in them some elements of analogy.

Everyone knows that when a court tries a case it attempts to consider all facts as far as possible which are material and relevant. That is, likewise, what every fair-minded man or woman should try to do in studying any question. No one expects perfection in judgment or action, but mistakes call for consideration as to whether such mistakes could have been avoided by reasonable study and care.

Such consideration requires also some sort of a general standard, which often may have to be modified. The law recognized a long time ago that such a standard was needed. We find, therefore, a standard or a yardstick known as that of the hypothetical reasonably prudent man or woman created by law to determine whether or not there should be a penalty for the failure to avoid certain kinds of mistakes.

Certainly if the test of the reasonably prudent man or woman were eliminated we would be at a great loss to find a fair basis of comparison. It would be like trying to estimate distance without any yardstick or any other form of measuring instrument.

Since it is really necessary to have the hypothetical reasonably prudent man or woman as a standard in private affairs, isn't it just as essential that when individuals act collectively or as a government that we should have a similar standard? We all know that no nation has or will show perfection in its policies, but it is a wholesome thing for people to keep in mind always as a desirable guide the concept of a reasonably prudent nation.

Constantly questions affecting health, education, taxation, business regulation, crime prevention, and other matters demand attention and action from our Government. No one expects a government to be able to do everything that it should do in analyzing and studying such problems, but it should make such efforts as under the circumstances are reasonable.

A man may come to a sound conclusion as to what is reasonable to do under the circumstances as they exist, but new circumstances and yet new conditions may change his standard as to what is reasonable. These changes or shifts occur constantly in the daily lives of all of us. Isn't it important that a nation should be sure that it isn't using an outmoded standard? Isn't it just as important that a nation should not be too quick to discard old opinions and old standards in trying to adjust itself to new conditions? A reasonably prudent nation has respect and reverence for the past, but it will not let that confidence prevent it from considering open-mindedly the problems which newly arisen conditions have brought into existence, for we know economic, industrial, and financial conditions are never really static but are always undergoing some degree of change.

Let me discuss specifically the matter of guaranty of bank deposits. Only a few years ago the United States Government passed

a law guaranteeing the safety of deposits of money in bank. Why did it do it? We all remember that long ago the bank had succeeded the chest or the old-fashioned stocking as the place for keeping money.

Obviously the shift to banks was a businesslike one, but some hazard was involved. If the depositor was to be able to draw his money from the bank whenever he wanted it, the bank must have it available at any time. How could the bank have all the money ready if it had to utilize a large part of the money to earn income for expenses?

More banks have failed because of unreasonable runs upon them than because the assets of the banks were basically inadequate. Such a hazard to an intrinsically sound bank should be avoided if feasible. It is true that public funds belonging to the United States Government, or some other division of government, were usually protected by surety bonds or deposits of collateral, but it had not seemed practical for the private depositor to be given such protection.

It is true that banks have long been under Government regulation and that the large majority of banks have always been run wisely by competent officials. There was, however, always the possibility that misfortune in many cases, or mismanagement in a few, would bring about bank failure and would result in losses to depositors.

The distressing troubles of the banks in 1931 and 1932 illustrated the fact that some additional form of safeguard seemed urgent, and that something should be done to encourage the revival of confidence. One result of this attitude of mind was legislation by the Federal Government by which every deposit up to $5,000 in a qualifying bank could be guaranteed fully by the United States Government.

Where does the Government get the money to furnish this protection? It comes from the banks who pay annually one-twelfth of 1 percent of the sum of their total deposits and that amount goes to the Government as a reserve fund for the payment of losses. Of course, when the Federal Government pays off depositors in a closed bank, the Federal Government receives as reimbursement all the dividends paid in liquidation which would have been paid to the depositors if there had been no guaranty by the Government.

What has been the result of this method of guaranteeing deposits? Since then a few banks have failed because of mismanagement, or because for other reasons, the assets of the bank became inadequate to pay depositors. Failures due, however, to sensational and tragic runs on banks have practically been eliminated with a resultant growth of confidence in banking institutions.

What has been the experience of the Government in this matter? Roughly speaking, the Government has received approximately $190,000,000 but its net losses growing out of its payment to depositors has only been about one-quarter of that amount. The remaining three-quarters is held by the Federal Government as a reserve fund for possible future bank failures.

Was this plan of guaranty by the Government necessary? Certainly it seemed advisable that some unusual steps should be taken and no adequate substitute for guaranty by the Federal Government was in sight.

What as to the future? This, of course, is a matter somewhat of speculation. There is a strong belief in this country that the Federal Government should not issue guaranties or participate otherwise in business unless such action by the Government seems clearly necessary. It may be that time and experience will demonstrate that some plan other than guaranty by the Federal Government will meet the situation. For instance, it is conceivable that private capital may devise a plan in time by which private insurance to depositors of banks can be furnished on a comprehensive and adequate basis. In the meantime the guaranty of bank deposits by the United States Government is certainly tiding us over a troublesome situation.

I think this story illustrates quite well the idea of a reasonably prudent Nation. The Federal Government avoided giving guaranty of bank deposits until the situation became so serious that some form of action was necessary, and yet private capital could not offer a full solution. The Government acted promptly when the guaranty seemed necessary, and I believe our Nation would act with reasonable prudence in modifying materially or changing entirely the present plan should a better method of handling the situation seem to be feasible sometime in the future.

Let me illustrate by another point. There is much discussion nowadays as to whether the United States Government should continue to have a stabilization fund. The fund was created, as we know, a few years ago when wide fluctuations in the currencies of certain foreign governments were having a very disruptive effect upon our foreign trade. Ten years ago prudence would not have required our Government to create such a fund. Let us hope that some day soon no such fund will be necessary or a better plan for handling the problems can be found.

The subject of preparedness is in the minds of all of us. Of course each one wants our Government to make such arrangements for national defense as are necessary or at least prudent. But what arrangements are required by prudence? We are fervently and emphatically for peace in this country and we covet none of the territory or physical possessions of any other nation. Unfortunately, however, the desire on our part for peace does not insure peace to us. Our Nation would have been justified 10 years ago in having army, navy, and aircraft facilities much less than what prudence requires we should have today.

We cannot be blind to the fact that there is an aggressive militaristic spirit abroad and that might and not right is too frequently set as the proper guide. We can only hope that within a short while different viewpoints will prevail in certain sections of the world whereupon we as a nation could continue to be reasonably prudent even if we then reduced materially the amount of our armaments. In reaching or in changing conclusions, a reasonably prudent nation, like a reasonably prudent man or woman needs and seeks the opinions of experts.

Of course, we need guns, aircraft, and ammunition for defense, but we require also commercial ships essential in time of war to assist in the operations of our battleships, cruisers, submarines, and naval aircraft.

We will not have made considerable adequate provision for our defense unless we have a merchant marine.

Likewise prudence suggests that since we are an exporting nation we must have some ships of our own to carry some, at least, of our products. It is not safe to be entirely dependent upon the ships of foreign nations.

I will not add to these illustrations. I have emphasized the guaranteeing of bank deposits as a policy which prudence has justified. It illustrates the fact that if a nation like an individual is to be reasonably prudent, it must be ready at all times to try to know the facts which are pertinent and to act accordingly. In doing so we should give due weight to old conditions as well as those which have newly come into existence.

Council Against Intolerance

EXTENSION OF REMARKS

OF

HON. WARREN R. AUSTIN

OF VERMONT

IN THE SENATE OF THE UNITED STATES

Tuesday, July 11 (legislative day of Monday, July 10), 1939

RADIO ADDRESS BY HON. W. WARREN BARBOUR, OF NEW JERSEY, JUNE 30, 1939

Mr. AUSTIN. Mr. President, I ask unanimous consent to have inserted in the Appendix of the RECORD an address delivered by the Senator from New Jersey [Mr. BARBOUR] on Friday, June 30, over the Mutual Broadcasting System network, as part of the Independence Day ceremony of the Council Against Intolerance in America, of which the Senator from New Jersey; George Gordon Battle, of New York; and William Allen White, of Emporia, Kansas., are co-chairmen. The Senator from New Jersey was introduced by Rev. Dr. Maurice S. Sheehy, head of the Department of Religious Education, Catholic University, Washington, D. C.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

My fellow Americans, any American should be proud to participate at any time in a ceremony dedicated to tolerance. And it is particularly appropriate, I think, that we should give special emphasis to the virtues of tolerance and the dangers of intolerance as we approach the Nation's birthday. It was a happy inspiration which led the Council Against Intolerance in America, of which I am a co-chairman, under whose auspices this program was arranged, to link it with the observance of Independence Day. For when we analyze it and recall not only the beginnings of the United States but the conditions which gave it birth, we must realize anew that tolerance is of the very essence of America. Without it there would be no America as we know it. And if we lose it the United States will pass into the limbo of experiments which have been tried, have failed, and become subjects for the historian rather than a living, pulsating contribution to man's progress.

When the Declaration of Independence was written by Thomas Jefferson and the little group who charted the Nation's course they saw with the eyes of true philosophers that without life, liberty, and the right to pursue happiness in his own way the state of man is worse than meaningless: it is hopeless. And so they wrote into the Declaration, as "inalienable rights" to which all men are entitled, that historic phrase with which every schoolboy is familiar. But that was merely a milestone—neither an end nor a beginning—in the progress of the race. For the search for freedom is without end and without beginning. It is innate, a part of man's spiritual inheritance, and remains a part of him always, no matter what his condition of life.

What the Founders of the Republic did, not alone in the Declaration of Independence but in the Constitution, into which were gathered the principles previously expressed in the constitutions of the Colonies, was to translate this ever-present desire for freedom into a political system. They said, in effect: "Men desire to be free and should be free. They have come here to be free. If they are to be free, this is the sort of government we must have. This is the kind of society in which we must live. Then, if those who come after us safeguard the institutions we give them, neither tyranny nor intolerance, except of their own mak-

ing, can ever again enslave them." And at that point, it seems to me, we confront and must guard against the only real danger to the freedom which we have come to enjoy as freely as we breathe the air about us. It has been so long since the gift was conferred on those who preceded us, to be handed down from generation to generation, that we take it too much for granted. If I can leave but one thought with you, I should like you to remember that the freedom which is given us can be given away by us—bartered away, thrown away—but can never be taken away from us except as we abandon our heritage of democracy for intolerant thinking and performance. That puts it in our own hands to say whether America will endure as a nation of freemen and equals, or whether we shall revert to barbaric conceptions of self-appointed supermen and self-ordained supergods who think they can rule men better than they can rule themselves. And we must never forget that, while the road to intolerance is easier than the path of tolerance, the end of intolerance is the loss of freedom and the destruction of a free society. We have seen individuals and minorities deported, enslaved, and slaughtered as the present wave of intolerance sweeps over Europe. But it is well to remember also that those who remain subject to the favor of intolerant rulers likewise lose their freedom.

Why did men come to the shores of America following the first voyages of discovery? As we all know, it was to escape persecution for religious beliefs or to escape the intolerable burden of taxation laid upon the backs of the people by tyrannical and profligate rulers engaged in constant warfare; to find a spot under the clear skies and on the virgin soil of a new land where men might think, speak, work, and worship as they chose, without fear, and as a right rather than as a favor. For this they left behind them all they had known of civilization—families, homes, in some cases wealth, titles, an assured place in a stable society. They brought with them the few things they could carry in the holds of the small sailing ships which took weeks or months to cross the sea. But they brought also the institutions of freedom and tolerance.

The springs of freedom which bubbled quietly to the surface when men formed their first societies have become great rivers which flow ever toward the sea of man's destiny as a thinking creature. But those springs can be poisoned. And as the sources are poisoned, so may the stream be poisoned. And as the stream becomes polluted and bitter, free societies may shrivel, die, and disappear, even as they are disappearing in other parts of the world. Unless we watch constantly for attempts to pollute the springs of our freedom and spread sickness through the land, and unless we are on guard lest we ourselves absorb the poison of tyranny and intolerance, the national health and even the national life will be endangered.

It is not always easy to detect the danger. Intolerance may express itself in whispers no less than lynchings, in social ostracism no less than the more flagrant forms of bigotry, in unreasoning partisanship, in the kind of thinking which denies to others the rights we claim for ourselves. It may express itself in speech or in action. It may appear in business, in politics, in our thinking about religion. But wherever it appears, or in whatever form, it springs from the same seed and produces the same evil crop.

Voltaire, in one of his essays, summarizes the principle of tolerance, which is to say the principle also of a free society:

"Think for yourselves," he said, "but grant to others the right to do so, too."

But it is not enough that we think for ourselves and concede the same right to others. Unless the quality of tolerance is a living force, it is nothing. It is of value only when it becomes a principle of social action. To discriminate against another human being because he does not think as we do, because he worships the same God in a different way, or because his skin is of a different color, or he is poor or rich in the world's wealth, is to slip back in our thinking to the kind of society which our ancestors fled when they came to America to found a better one. It is to permit ourselves to be contaminated by the philosophies which less vigilant peoples have had forced on them by the comic-strip Napoleons who strut and shout for a little time in Europe and Asia because they ignored the dangers which confront us here.

I think that too often we are inclined to forget that intolerance is a moral issue also. It is in morals that tolerance begins, since law is but the crystallization of custom, and custom the product of our moral conclusions with respect to the relationship of man to man.

The Apostle Paul urged the virtues of faith, hope, and charity. "And the greatest of these," he wrote, "is charity." I think we might profitably ponder that observation. For without faith life is meaningless, without hope it is an empty void, but without charity we are unfit to live among our fellow men.

Surely there is room in the world for men and women of different faiths, different beliefs. Convictions are important in life, but let us not forget that men do differ, as they have a right to differ in their thinking about fundamentals as well as about the superficial things of life. We are not all cut to a pattern. What an uninteresting world it would be if we were. But there is a simple formula by which we may live peacefully and contentedly together. It is the formula of tolerance:

"So many gods, so many creeds,
So many paths that wind and wind;
When all this old world really needs
Is just the art of being kind."

Good night.

Resources and Opportunities of the South

EXTENSION OF REMARKS
OF
HON. THEODORE G. BILBO
OF MISSISSIPPI
IN THE SENATE OF THE UNITED STATES

Tuesday, July 11 (legislative day of Monday, July 10), 1939

ARTICLE BY HON. THEODORE G. BILBO, OF MISSISSIPPI

Mr. BILBO. Mr. President, I have recently prepared a brief sketch of a few of the inexhaustible resources and glorious opportunities of the new land of promise—the deep South. This article will appear in the next issue of that great farm paper, Southern Agriculturist, published at Nashville, Tenn.

Being anxious that the story of these golden opportunities and inexhaustible resources that are being developed and are awaiting development by the farmer, the miner, all other laborers, and the industrialists from everywhere, who are looking for new fields to conquer, shall to them be made known, and in order that this information may be given to the people in all parts of the United States, I ask unanimous consent to have this message published in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

THE DEEP SOUTH

(By Senator THEODORE G. BILBO, of Mississippi)

Reaching inland for about 200 miles from the crescent shore of the Gulf of Mexico is a subtropical paradise which we call the deep South. There is no clear line of demarcation between the South and the deep South, but as time passes I am sure we will hear more and more about this beautiful land which is rapidly becoming an agricultural and industrial empire.

We deep southerners are apt to choke up a bit when we start singing the praises of this particular part of Dixie where both the weather and the hospitality stay warm the year around. It's God's country for sure, and one of the most beautiful lands that man ever saw.

But don't forget that the deep South has wealth as well as beauty. It has the slash and the longleaf pine, the orange, the grapefruit, the pecan, and the tung tree. Then there are our fields of sugarcane, sweetpotatoes, rice, and cotton—crops with new as well as old uses—and mineral resources equal to those of any section of the country.

As a matter of information, it might be well for us to make a sort of inventory of the deep South to see what we already have as well as what we may look forward to in the future.

First, let's count our pine trees and make a brief survey of the industries they support. Roughly, about 60 percent of the Southland is covered with forests, divided about half and half between pine and hardwoods. To the pine belongs the glory just now, because it is furnishing the raw material for the pulp and paper industry that is rapidly developing in the deep South.

For years northern woods have furnished the bulk of the pulp for the paper industry. But the Northland's easily accessible supplies of trees for pulp are rapidly dwindling. Furthermore, reforestation is a long-time problem up there. Fortunately, and thanks to the long growing season, southern pines grow to maturity in about one-third the time required to grow a pulp tree in the North. Recognizing this advantage of the southern forests, the paper industry now has an investment of more than $200,000,000 in about 40 pulp mills scattered throughout the Southland. Many of these mills have started operating within the past few years, and others are being built.

These mills furnish employment for about 25,000 men inside the plants and another 20,000 who cut the trees and haul them to the mills. They are producing about 10,000 tons of pulp each day and, at this rate, the mills will consume this year, and in years to come, about 5,000,000 standard cords of rough wood per year. The deep South is the only place that can supply, and keep supplying, such huge quantities of pine.

The pulp mills at present are engaged in manufacturing kraft paper. But at Lufkin, Tex., a mill is being built to manufacture newsprint. That's the kind of paper used for newspapers. The time will come, I feel sure, when the South will supply its own newsprint from its own forests.

Naval stores is also a product of the old pine tree. It means turpentine and rosin. Naval stores is the principal chemical export crop of the entire Nation. In an average year the pine forests of the deep South produce more than 2,225,000 barrels of rosin and more than 500,000 barrels of turpentine. More than half of this

crop is sold to foreign countries. Something like 100,000,000 slash- and longleaf-pine trees are worked to furnish the crude gum for these products, and it is an industry that brings an annual income of about $40,000,000 into the South's cash register, and furnishes employment for more than 50,000 persons. This industry supplements both the lumber and pulp industry. In other words, the owner of pine trees can work the trees for gum for 10 or 15 years and then sell them for lumber or pulpwood. At the same time he can have young trees coming into working size as the older trees are worked out. In this way he has a steady income from one or more sources.

Now, let's take a look at another tree that is produced in the deep South. It's the tung tree. Last year tung trees, which can be grown only in the deep South, produced nuts bearing 4,000,000 pounds of valuable vegetable oil used in paints, varnishes, and lacquers. The year before we imported 175,000,000 pounds of tung oil from China, for which we paid more than $15,000,000. The tung industry is in the early stage of development. We need more knowledge about tung-oil production. For this reason I supported legislation which sets up three new laboratories to investigate the possibilities of tung-oil production in this country. The laboratories are located at Gainesville, Fla.; Bogalusa, La.; and Cairo, Ga. In these laboratories we hope to work out information that will enable us to build a tung-oil industry that is sound and permanent. We know that it is not a get-rich-quick scheme, but we expect to make it a valuable part of the South's diversified farm program.

The deep South is also the home of that great juicy giant we call the citrus industry. And this year's crop of 75,000,000 boxes of oranges and 40,000,000 boxes of grapefruit was a record. Furthermore, many new groves will not come into peak production for several years yet. While this industry has expanded rapidly, so has the public appetite for citrus fruits. And if the public wants more the deep South can raise them.

With such crops as sugarcane, cotton, and rice, it is no longer a question of producing more but of producing a balanced abundance. But with sweetpotatoes, of which the South produces about 75,000,000 bushels a year, science has found a profitable industrial use to supplement the yams sold as food. At Laurel, Miss., chemists of the United States Bureau of Chemistry and Soils have worked out a process for making starch from sweetpotatoes. This project is enabling the farmers around Laurel who grow the potatoes to make more money. In other words, chemistry has given them a profitable industrial outlet for one-of their farm crops.

I might say that chemistry is responsible for much of the development that has taken place in the South in the last few years. It has not only done much for us already but it offers such great possibilities that I introduced a bill which resulted in the establishment of the four regional research laboratories which are to search for new and wider industrial outlets for farm products. The southern laboratory, located in New Orleans, is now under construction.

Another little-heard-of resource of the deep South is its pastures. Again, because of that year-around warm weather and the plentiful rainfall, grasses grow longer and furnish more grazing here than any other place in the country. The trouble has been in the past that the beef breeds that thrive farther north can't stand the warm weather that makes the long grazing season in the South.

Here, again, the men of science are fulfilling a need. At the Iberia Livestock Farm, Jeanerette, La., experts of the Bureau of Animal Industry are combining the tolerance of Brahman cattle to tropical and semitropical conditions with the superior beef-producing qualities of the major beef breeds. Studies showed that Brahman cattle will graze right through a hot day while Angus cattle seek the shade. That's because the Brahmans have sweat glands through which they can throw off heat. Half-bred and three-quarter bred Brahman-Angus cattle inherit this same characteristic. Further investigations show that Brahman-Angus calves reach a weaning weight 3 weeks ahead of Angus calves. We have pastures in the deep South that will produce 400 pounds of beef per acre a year. These breeding studies point to the possibility of soon having cattle to eat that grass.

In our inventory we can't forget the vast mineral wealth of the deep South either. Right now the center of the great petroleum activity is found in Texas and Louisiana. The petroleum industry is truly an industry of the deep South, because much of the oil is now coming from wells down in the bayou land.

Then there's the sulfur fields, which is one of the South's greatest mineral prizes. Before technologists found how to bring the sulfur out of the deep wells of Louisiana and Texas a small island off the coast of Italy held a world monopoly on this widely used element. But that isn't the case today. The crude sulfur ore mined by Italy can no longer compete with the sulfur wells of the South.

The deep South is also the home of some of our greatest salt mines. Here, too, are located huge supplies of phosphates so valuable to our fertilizer industry and coal in quantities sufficient to supply our needs for many years.

And so we conclude our brief inventory of the deep South. It's not the first nor the last inventory of this great and fast-growing section. Industry has surveyed it before, and liked it so well that it is moving in. It is estimated that fully half of the industrial concerns that are coming into existence are locating in the South. So, instead of the South being the Nation's No. 1 problem, it is my opinion that it is the country's No. 1 opportunity.

Federal Spending

EXTENSION OF REMARKS

OF

HON. RAYMOND S. SPRINGER

OF INDIANA

IN THE HOUSE OF REPRESENTATIVES

Monday, July 10, 1939

ARTICLE FROM THE WASHINGTON POST

Mr. SPRINGER. Mr. Speaker, many of our people are alarmed because of the excessive spending of money by the administration now in power. I have received many letters and petitions from the businessmen, the farmers, the laboring men and women, and the taxpayers from my district urging that the ruthless spending of money be limited and restricted, and that our Federal Government be required to proceed upon a plan of economy in its affairs. A continuation of this present spending program will certainly cause disaster. The effect of this unprecedented spending is further depressing business and industry, and when those elements in our business world are depressed, and almost destroyed, the farmer suffers and our laboring men and women are rendered jobless; this tends to increase, rather than diminish, our unemployed situation. Any businessman, or any individual, who would pursue the same course as our own Government, under the guiding hand of those at the helm of the present administration, would soon meet bankruptcy. Likewise our own Government, in rushing toward the brink of bankruptcy or inflation, either one of which means disaster to our people.

Mr. Speaker, I desire to include in and as a part of my remarks a very illuminating article written by Roger W. Babson, which appeared in the Washington Post, of Washington, D. C., of date July 10, 1939, which article has my wholehearted endorsement and approval, and is as follows:

[From the Washington Post of July 10, 1939]

TAXES NOW TAKE 30 PERCENT OF OUR INCOMES, BABSON SAYS—10 YEARS AGO IT WAS 15 PERCENT; RATE OF PUBLIC SPENDING, HE SAYS, IS DRIVING NATION INTO INFLATION

(By Roger W. Babson)

GLOUCESTER, MASS. July 9.—Family breadwinners are sentenced to work 100 days this year for the public in order to meet Government spending. Ten years ago Federal, State, and local expenses consumed only 15 percent of the Nation's income. Today they are gobbling up nearly 30 percent. The saddest part of the situation is that the wage workers and others who are the real sufferers from this constantly swelling tax bill do not realize what is happening. The politicians kid them into thinking that Rockefeller, Morgan, and General Motors are the only ones who pay taxes.

TAX TALK THE BUNK?

For 5 years I have been hammering away on the growing percentage of national income being eaten up by Government activities. In this connection, today's mail contained a very interesting letter from an Illinois reader. I would like to quote portions of it:

"All of this explosive propaganda regarding high taxes is, to my mind, nothing but a lot of bunk. I have been at the head of a corporation for 26 years, and, as far as I am concerned and my corporation is concerned, I see nothing on earth wrong with the present tax system. During 1931, 1932, and 1933 we paid no taxes to the Federal Government, for the simple reason we did not make any money. When a corporation or an individual makes a profit there is no reason why he should not pay a tax. * * *

"The years 1934, 1935, 1936, 1937, and 1938 were good years for us and 1939 is even better. I, therefore, see no reason why a lot of propaganda should be put out trying to influence the ignorant voter that the country is going to hell, or somewhere else, as there is absolutely nothing to this line of stuff."

This letter is extremely significant. I wonder if many people feel the same as my correspondent does about taxes. Grant that they do, is this any reason for our Government continuing to spend recklessly, to mortgage future generations, and to push us into inflation? Readers know that I have supported many things that the administration has proposed and adopted. Ever since President Roosevelt abandoned his economy platform in 1932, however, I have been 100 percent opposed to his spending policies.

PUBLIC SPENDING

History shows that no nation can spend more money than it receives in taxes for long without bringing on inflation and creating

a revolution. The United States has failed to balance its Budget for 9 long years. It is estimated that a total of thirty to forty million people receive financial aid from Federal, State, and local governments. A huge army of a million Federal officeholders has been mobilized. A vast vested interest in public spending has been built up.

My correspondent says that taxes are not a burden in his case. He does not feel their pinch, because his business has forged ahead fast even though his taxes have increased. But he cannot throw aside figures issued by the Government which show that taxes are taking a far greater portion of profits and wages than ever before.

SPENDING AT NEW PEAK

Here is a table comparing Federal receipts and expenditures in billions of dollars for recent years. Even 1937's expenditures, big as we thought they were, look small compared with today's outlay. Despite the highest tax collections in history, receipts were only enough to pay 60 percent of the Federal Government's bills in 1939.

	Receipts	Expenses
Fiscal year ending:		
1930	4.2	3.9
1933	2.1	5.1
1936	4.1	8.8
1937	5.3	8.1
1938	6.2	7.7
1939	5.6	9.1

Every time I discuss public spending I receive a flood of mail from people who accuse me of being inhuman. They tell me we will have revolution if we do not take care of the 10,000,000 unemployed. I realize that these millions of unfortunates must be aided, although I totally disagree with my critics as to how they honestly can best be aided. However, of our huge $9,000,000,000 Federal expenditures this year, only 25 percent will go for relief of the unemployed. The balance is being spent for growing permanent bureaus, the Army and Navy, farm relief, and pegging prices of commodities such as silver and cotton.

SILVER PURCHASE

Take the silver-purchase program, for instance. The United States Treasury has bought nearly $1,000,000,000 worth of silver from all over the world in the last 6 years. We have almost singlehandedly financed the Mexican Government by our silver purchases. Our thanks for doing so was the stealing of our oil properties by that Government. We have accumulated a mountain of silver bullion at a cost which is nearly three times its commercial value. And the sum total of our efforts to make silver a monetary unit again has been to destroy, perhaps forever, its monetary character in every country where 6 years ago it was part of the currency.

There are other examples of the disastrous results of our Government's meddling with natural economic laws. These various projects have cost the Nation billions of dollars which must be paid for in higher taxes for years to come. Furthermore, the cost of these disastrous experiments will not be paid by the Rockefellers, by General Motors, by prosperous and growing concerns, such as those of my Illinois correspondent. They will be paid by small and struggling employers, by harassed wage workers, and by low-salaried "white collar" people through hundreds of hidden taxes on the necessities of life.

INFLATION DRAWING NEARER

Unless the American people wake up some day soon and change their character and goals, I do not believe that spending can ever be controlled under our present democratic form of government. Two years ago inflation was in the headlines. Everyone was thinking about it, talking about it, hedging against it. From a news angle, however, it is now dead as the proverbial doornail. But inflation is far nearer now than it was 2 years ago. When it will strike, no one knows. My advice to readers is: Remember that the United States and the whole world is rushing pell-mell toward inflation.

The Nation's Credit for the Nation's Needs—Widespread Support for H. R. 4931

EXTENSION OF REMARKS

OF

HON. JERRY VOORHIS

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, July 5, 1939

Mr. VOORHIS of California. Mr. Speaker, leading economists are today fairly well agreed that our central economic difficulty lies in the fact that income spent does not equal the value of goods and services produced in our country.

Recently the Government has tried to overcome the depression by increasing the total buying power of the people of America. It has tried to do this by Government loans, payment of wages to unemployed people, and similar measures.

This, however, has been made possible only by an increase in the public debt. For in the absence of the creation of any debt-free money by the Government as the Constitution provides, the only method we now have of increasing the money supply of the Nation is by either private or public contraction of debt. Debt, and debt alone, is our present means of getting the banks to create demand deposits for borrowers. We use checks drawn on these demand deposits for 95 percent of our money. Hence, if private debt decreases, public debt must increase, or our money supply is cut off. This is the reason for our large public debt and the reason we can only get rid of it by a reformed monetary system.

We have billions of idle deposits in the banks and several billions of excess reserves. One reason for this is the expectation on the part of those holding these deposits that the value of the dollar in terms of goods is going to rise. A dollar of stable value in terms of commodities would help to end this tendency.

Prices of agricultural products are far too low for the welfare of either the farmers or the people as a whole. It is absolutely imperative that these prices be raised.

Government investment must be used to make up for the failure of private investment to absorb hoarded savings. But at present we pay for most of our public works twice over, and quite needlessly so.

And the income of great groups of our people must be maintained in some manner if the depression is not to grow worse and distress to increase. Were we to balance our Budget by cutting expenditures for W. P. A. and similar enterprises we could not but render the depression deeper, yet the Budget should soon be balanced.

Our supply of actively circulating buying power is far short compared to the need of our people for goods and of our businesses for markets. These are some of our problems.

WHAT H. R. 4931 WOULD DO

With these problems in mind, H. R. 4931 was drafted in consultation with some of the best minds in America and introduced in the House.

Under its terms a monetary authority, as an agent of the Congress, would create money directly as it was needed by our national economy. With some of that money we could redeem or buy in a portion of our outstanding national debt. Under the present system when additional money is required to sustain our economy our Government goes to the commercial banks and sells bonds to them in order to get them to create "money" in the form of demand deposits. Thus under H. R. 4931 each increase in our money supply would decrease the national debt; under the present system each necessary increase in our money supply increases the national debt.

Furthermore, this bill would provide the Nation with a unified, controllable monetary system.

It would give us a dollar whose purchasing and debt-paying power would be constant and stable. It would accomplish this by bringing more dollars into circulation when the value of the dollar—that is, its command of goods—threatened to rise. This in turn would cause idle hoards to cease to be idle, else they would decrease in value in the owners' hands.

H. R. 4931 would stop the increase in the public debt without crippling the Nation for want of an adequate money supply. And it would make possible the increase of buying power just to the extent that increase in need for buying power—that is, increase in production—took place. Public investment in revenue-producing works would be possible without increase in public debt.

It would end the threat of bank failures forever, would remove the present necessity on the part of banks to insist upon short-term instead of long-term loans, and would make it possible for every depositor in all the banks in the country to

draw out all their deposits at the same time and still not cause a single bank to be in distress. These things would come about by the introduction of a 100-percent reserve system. Incidentally this would remove absolutely any threat of an inflation of bank credit.

Finally, and most important, this bill would restore to Congress, acting through its own monetary agent—a new Federal Reserve Board—the sole right of creating money in the country. It would mean that money and credit would be originally created, not as at present by banks monetizing their borrowers' security, but by direct governmental action exercised in the public interest on the simple principle of increasing the amount of money in circulation each year in proportion as the growth of the Nation's industry and population required.

No longer would the Nation depend upon expanding private or public debt as its sole means of increasing its money supply. Instead, it would have a safe dependence upon the exercise by a free people of its right to monetize through an appropriate Government agency its own net annual growth in wealth and population. Our money would be based not on the size of our debt but on the extent of our wealth.

BRIEF SUMMARY OF PROVISIONS OF BILL

H. R. 4931 contains the following main provisions:

(1) Purchase by the Government of the capital stock of the 12 Federal Reserve banks, thus clearing, absolutely, title to all gold against which the Federal Reserve banks now hold liens in the form of gold certificates, and restoring to the Government the banks of issue of the United States.

(2) Provision for the appointment of a new Federal Reserve Board; abolition of the advisory council and open-market committee; addition of the Secretary of the Treasury to the Board; making the Board the direct monetary agent of Congress to regulate the value of money, exercise sole power to issue all lawful money of the United States and to control the volume of demand bank deposits, and transferring to the Board monetary powers now in the hands of various other governmental officials and agencies.

(3) Provision of funds immediately for payment of old-age pensions, wages on public works, loans to agriculture and industry, and other recovery purposes as determined by Congress, not by borrowing or increase in debt but by direct use of the Nation's credit through its own Federal Reserve banks.

(4) Continuance of this expansion policy until either full employment is restored or the dollar brought back to the value it held in 1926, and thereafter the maintenance of a stable value in the dollar.

(5) As protection against possible runaway inflation of bank credit and in order to assure 100 percent liquidity now and forever in demand deposits, the bill requires maintenance by banks of dollar-for-dollar reserves behind all demand deposits and provides ways to assist banks in establishment of such reserves.

(6) Simplification of the whole structure of governmental control over banking and all monetary matters, extension of guaranty of deposits to savings and time deposits, and elimination of duplicate examination of banks by several governmental agencies.

(7) Restoration to Congress of its constitutional power to be the sole agency to coin money and regulate its value, and provision that, as national population and productive capacity grow, the volume of money shall be increased so as to maintain a constant purchasing and debt-paying power in the dollar.

SUPPORT FROM AUTHORITIES IN THE FIELD OF MONETARY SCIENCE

A very large number of letters have been received expressing interest in and support of H. R. 4931. Some of the more important have come from men who have spent their lives in the study of economics and of monetary science. Three such men are Prof. Irving Fisher, of Yale; Prof. Frank D. Graham, of Princeton; and Prof. Willford I. King, of New York University. Their letters follow:

MARCH 20, 1939.

Hon. JERRY VOORHIS,
House Office Building, Washington, D. C.

MY DEAR MR. VOORHIS: I am very much delighted with your bill, No. 4931, as I have been with its predecessor, the Binderup bill, upon which yours is a decided improvement. I do not need to say that I highly approve of the bill, as it is so largely in tune with, and largely founded on, the program for monetary reform, of which I was a signer.

Very sincerely,

IRVING FISHER.

MARCH 22, 1939.

Hon. JERRY VOORHIS,
House Office Building, Washington, D. C.

MY DEAR MR. VOORHIS: Professor Fisher was kind enough to send me a copy of H. R. 4931, which you have introduced. It seems to me that its provisions are in general sound.

Since the Federal Reserve Board says that it cannot and does not wish to control the price level, I feel that it is important to replace it with a group which will undertake the functions which ought to be vested in such a body. Your bill does this.

Very sincerely yours,

WILLFORD I. KING,
Professor of Economics.

MARCH 24, 1939.

Hon. JERRY VOORHIS,
House of Representatives, Washington, D. C.

DEAR CONGRESSMAN VOORHIS: I want to express my enthusiasm for your bill H. R. 4931, which seems to me to propose a thoroughly sensible reorganization of our monetary system and to offer a prospect of improving, rather than disrupting, business stability by our monetary institutions. There is only one point on which I have any serious reservations. That is the paragraph which makes obligations of the United States discountable at any Federal Reserve bank at the market price of such obligation on the day of discount, but, in my general approval, I am not disposed to insist upon this point at this time.

Very sincerely yours,

FRANK D. GRAHAM.

A couple of months ago a group of economists, headed by Professor Fisher, prepared and sent to leading professors of economics throughout the Nation a program for monetary reform. The proposals advanced in that program are almost identical with the provisions of H. R. 4931. To date, of 320 replies received from these economists, 274 have approved the program for monetary reform and only 40 have done so with even minor reservations.

ROBERT L. OWEN'S LETTER

Probably so far as America's statesmen are concerned, none has contributed quite so much to the education of his country with regard to monetary matters as has Senator Robert L. Owen, author of the original Federal Reserve Act. I am proud, indeed, to include here a letter recently received from Senator Owen:

JUNE 23, 1939.

Hon. JERRY VOORHIS,
House of Representatives.

MY DEAR MR. VOORHIS: Answering your inquiry with regard to H. R. 4931, I am in accord with the objectives which the bill broadly contemplates—the regulation of the volume and value of money by Congress under a legislative mandate and congressional control of the Board of Governors and the Federal Reserve System.

There have been some changes made in the bill with which I am not very familiar, but I am certainly greatly appreciative of the great interest you have shown in working out this problem. Without the public control of the volume and value of money through the control of currency and demand bank deposits this country cannot have any dependable security for business contracts.

It seems to me of the most urgent importance that the Congress should immediately, regardless of any other demand whatever, solve this problem. For upon its wise solution depends the future stability and prosperity of not only the United States but of the whole world. For America is in a position to establish a system which will enable other nations, as well as the United States, to double their productive power, to the welfare of the people of all nations.

By a proper solution of this matter poverty can be abolished and world peace put upon a sound foundation. We have the means now of talking to the whole world over the radio, and the truth can be made manifest so that people everywhere can understand it.

The Committee on Banking and Currency could easily, without delay, take the bills before the committee and, by giving concentrated attention to the points which have been presented, arrive at a correct determination of every principle involved, and can perfect a bill without any unreasonable delay whatever. They have all the facts and testimony which is necessary. In Senate Document No. 23 of this Congress I attempted to collate for the Con-

gress the principles and the facts which are necessary to a complete comprehension of this question. I am hopeful that my efforts may be useful to you and to others who are really studying this matter from a high and patriotic standpoint.

I congratulate you heartily upon your sincere and devoted work in trying to bring this problem to a wise solution.

Yours very respectfully,

ROBERT L. OWEN.

SUPPORT FROM VARIOUS GROUPS

In addition to those who have made a scientific study of the monetary questions there is a surprising and most encouraging amount of support for the bill being shown by every sort of American citizen and every kind of organization and group.

For example, the president of a large bank in one of the major cities of the Nation, whose name for obvious reasons should not be used, writes as follows:

MARCH 20, 1939.

Hon. JERRY VOORHIS, M. C.,
House Office Building, Washington, D. C.

DEAR MR. VOORHIS: Would it be possible to obtain a copy of House bill No. 4931, which has been introduced by you?

In a letter from Dr. ——— on this subject this morning, he tells us that he could not avoid opposing your bill principally because of two factors: "First, it destroys the earning power of the demand deposit department of banks. Second, it ties up the money-expanding program in large part to the price level of 1926."

We think that he has told you of our criticism of this "first" feature he criticizes. In our opinion, divorcing money from debt, under the 100-percent plan, would be of so much greater benefit to the country than increased earnings for the banks could possibly be, that the matter of income from the demand-deposit side should be of minor consideration. Certainly, any consideration would have no effect on the antagonism with which the bankers will oppose the entire bill. Best wishes.

Sincerely yours,

——— ———.

An official of the Midland Cooperative Wholesale, probably the largest consumer cooperative organization in America, whose members are largely northwestern farmers, has this to say:

MIDLAND COOPERATIVE WHOLESALE,
Minneapolis, Minn., May 31, 1939.

Hon. JERRY VOORHIS,
House of Representatives, Washington, D. C.

DEAR MR. VOORHIS: We have read and carefully studied H. R. 4931 proposing to revamp our money system in conformity with economic needs at the present time, and we are in agreement with the provision of the bill and only regret that we will not be able to attend the hearing on it before the Banking and Currency Committee.

If you deem it advisable, I will be glad to circulate additional copies of this petition, as we would like to see Congress take some definite action to control the monetary system now in the hands of the private bankers. Any legislation which will have a tendency to reestablish confidence in investments and put the enormous sums of money now on deposit in the banks back into circulation will certainly benefit the agricultural northwest area.

Very truly yours,

MIDLAND COOPERATIVE WHOLESALE,
By A. N. HOWALT,
Director of Personnel and Public Relations.

And from the point of view of religion, I am especially proud to quote a letter from the director of the board of Christian education of the Presbyterian Church:

BOARD OF CHRISTIAN EDUCATION OF THE PRESBYTERIAN CHURCH IN THE UNITED STATES OF AMERICA,
PHILADELPHIA, PA., *May 17, 1939.*

Hon. JERRY VOORHIS,
House Office Building, Washington, D. C.

DEAR CONGRESSMAN VOORHIS: I have been reading and thinking about your address in Congress on March 10, 1939, and H. R. 115 and H. R. 4931 which you kindly sent me. It seems to me that you have, in H. R. 4931, reached to the very heart of our whole economic problem. The idea that the banks in the control of credit have practically usurped the congressional power of coining money and regulating its value had never occurred to me before. I have favored the general idea of the commodity dollar and a managed currency but have not had the technical training to know how this can be brought about. Your bill seems to accomplish this purpose in a most businesslike and effective way, and I shall follow further developments with the greatest possible interest.

Very sincerely yours,

CHARLES J. TURCK.

Finally, there have been received to date over 11,000 signatures on petitions requesting hearings on this bill and consideration of it by the House. These petitions have come simply as a result of such very limited efforts as one congressional office can put forth coupled with the earnestness of people who, believing in this cause, have given of their time and energy in every part of the United States. These petitions I am laying on the Clerk's desk today in the earnest hope that the time may speedily come when the Congress of the United States will undertake in earnest its primary task of establishing for the United States a monetary system which will accord with the needs of this great industrial Nation and of modern technology.

TEXT OF H. R. 4931

A bill to restore to Congress the sole power to issue money and to regulate its value as provided in article I, section 8, of the Constitution of the United States; to improve the banking system; to aid in restoring and maintaining full employment and production; to reduce the public debt; and to provide a stable currency

Whereas article I, section 8, of the Constitution of the United States provides that "The Congress shall have power to coin money, regulate the value thereof, and of foreign coin"; and

Whereas there has developed in the method of conducting commercial banks in the United States the custom of lending the private credit of such institutions under the guise of lending money; and

Whereas such credit, transferable from one depositor to another by the check or order of the depositor or any other person in his behalf is now generally accepted in payment of private debts, thus in effect providing an uncontrolled and privately created circulating medium of exchange which performs the functions of money in disregard of article I, section 8, of the Constitution of the United States; and

Whereas the uncontrolled alternate expansion and contraction of this synthetic medium of exchange induces recurrent periods of uncontrolled and disorganizing inflation followed by disastrous periods of equally uncontrolled deflation, bankruptcy, and distress; and

Whereas it has become necessary to the safety and welfare of the Nation that inflation and deflation alike be prevented and that a stable buying power be maintained in the dollar; and

Whereas these aims and purposes can only be accomplished if Congress acts to end the existing dependence of the United States upon a privately created and destroyed bank credit medium of exchange, and to substitute therefor a dependable medium of exchange, not based on debt, but put into circulation without increase in the public debt in accordance with the provisions of the Constitution: Now, therefore,

Be it enacted, etc.,

PURCHASE OF FEDERAL RESERVE BANKS BY GOVERNMENT

SECTION 1. (a) The Secretary of the Treasury of the United States is hereby authorized and directed forthwith to purchase the capital stock of the 12 Federal Reserve banks and branches, and agencies thereof, and to pay to the owners thereof the book value of such stock at the date of purchase.

(b) All member banks of the Federal Reserve System are hereby required and directed to deliver forthwith to the Treasurer of the United States, by the execution and delivery of such documents as may be prescribed by the Secretary of the Treasury, all the stock of said Federal Reserve banks owned or controlled by them, together with all claims of any kind or nature in and to the capital assets of the said Federal Reserve banks, it being the intention of this act to vest in the Government of the United States the absolute, complete, and unconditional ownership of the said Federal Reserve banks.

(c) After the date of passage of this act all earnings of said Federal Reserve banks shall be paid into the general fund of the Treasury on the last day of each fiscal year.

BOARD OF GOVERNORS AS MONETARY AGENT OF CONGRESS

SEC. 2. (a) The Board of Governors of the Federal Reserve System (hereinafter referred to as the Board) is hereby constituted the monetary agent of the Congress of the United States to regulate the value of the money of the United States in accordance with article I, section 8, of the Constitution of the United States, and for this purpose the Board shall have sole power to issue all lawful money of the United States, to regulate the exchange value of all foreign currency and coin, and to control the volume of demand bank deposits, and shall be fiscal agent of the Government of the United States.

(b) The Board shall be composed of seven members, appointed by the President with the advice and consent of the Senate. The Secretary of the Treasury shall be ex officio, one of the seven members of the Board. Members of the Board shall be selected on the basis of their qualification by experience, knowledge, and ability to formulate monetary policy.

(c) Members of the Board shall receive the same salaries as members of the Cabinet.

(d) Any member who has served 14 years or more shall, upon his retirement, receive annually for the remainder of his life a retirement salary or pension of two-thirds of the annual salary received during his active term of office.

(e) The terms of office of members of the present Federal Reserve Board shall expire 30 days after the date of passage of this

act, whereupon a new board shall be appointed in the manner prescribed in subsection (b) of this section, except that members, with the exception of the ex officio member, shall be appointed for terms of 2, 3, 4, 5, 6, and 7 years, respectively. Upon the expiration of the term of office of each member so appointed, his successor shall be appointed for a term of 7 years. Members of the present Board and of all future Boards shall be eligible for reappointment.

(f) Any member of the Board except the ex officio member may be removed from office by the passage of an appropriate resolution by the Senate and House of Representatives.

(g) Upon the death, resignation, or removal from office of any member of the Board, a successor shall be appointed to fill the unexpired term of such member in the manner set forth in subsection (b) of this section.

(h) Upon the passage of this act the terms of office of the Federal Reserve Advisory Council and of the Open Market Committee shall terminate and thereafter the functions of such Open Market Committee shall be exercised by the Board.

(i) Within 1 year after the passage of this act, the terms of office of all officers and directors of the 12 Federal Reserve banks and their branches and agencies shall expire, and thereafter the operation of each bank shall be conducted by a manager selected and appointed by the Board and such assistant managers as they may deem necessary, under such rules and regulations as they may from time to time prescribe: *Provided, however,* That salaries of managers are hereby limited to $12,000 per annum, those of assistant managers to $9,000 per annum, and those of department heads to $6,000 per annum.

(j) The Board shall purchase at a price to be from time to time fixed by it any or all gold which may be offered in the domestic market. The Board, with the approval of the President, may purchase or sell gold, silver, foreign exchange, and instrumentalities and/or obligations of foreign governments, at such times, at such prices, and in such quantities as in its discretion may appear to be necessary to promote stability in the buying power of the dollar, to protect foreign commerce against the adverse effect of depreciated foreign currency and/or to carry out the purposes of this act. The Board may sell gold or silver at the current selling price fixed by it in such amounts as may be necessary to permit the settlement of payments arising out of the legitimate and normal business and financial requirements of international trade and/or reasonable traveling and other personal requirements in connection therewith. The decisions of the Board as to all questions relating to the purchase and sale of foreign exchange and the exchange of currency for gold or silver in such international transactions shall be absolute and final. The Board shall prescribe, with the approval of the President, such rules and regulations governing banking transactions involving foreign exchange or deposits owned by citizens or institutions of foreign countries as may be necessary to carry out the purposes of this act. All laws or parts of laws in conflict with this subsection are hereby repealed.

(k) The Board shall have and exercise all powers relating to the purchase of silver conferred by law upon the Secretary of the Treasury of the United States.

(l) Sections 43 and 44 of title 3 of the Agricultural Adjustment Act approved May 12, 1933 (48 Stat. 51), as amended, are hereby repealed.

JURISDICTION AND AUTHORITY OF THE BOARD—DEMAND DEPOSITS TO BE HELD IN TRUST

SEC. 3. (a) All individuals, firms, associations, or corporations in the United States, or Territories and possessions thereof, receiving deposits of money or credit or any other substitute medium of exchange withdrawable or payable upon the check or equivalent order of the depositor upon demand or within 60 days and transferring such deposits or title thereto to other banks or individuals, firms, associations, or corporations, in the United States, its Territories, or possessions, or foreign countries, shall be deemed to be commercial banks engaged in interstate commerce, and as such are subject to Federal jurisdiction and to the authority of the Board of Governors of the Federal Reserve System, according to the terms of this act.

(b) Within 1 year after the passage of this act, all commercial banks shall be required to hold all deposits which are subject to check and/or payable on demand or within 60 days (hereinafter referred to as demand deposits) in trust for their demand depositors, in lawful money of the United States on hand or on deposit in a Federal Reserve bank: *Provided, however,* That commercial banks which have a portion of the funds of their demand depositors invested in interest-bearing bonds and/or notes issued or fully guaranteed by the United States Government 3 months after the date of passage of this act may hold such interest-bearing bonds and/or notes in trust for their demand depositors in lieu of lawful money or deposits in a Federal Reserve bank and such commercial banks may continue to receive the interest thereon and retain same for their own benefit: *Provided further,* That any such direct or fully guaranteed obligations of the United States shall be discountable at any Federal Reserve bank, at the market price of such obligations on the day of discount as determined by the Securities and Exchange Commission, but in no case at less than the par value thereof: *Provided further,* That no commercial bank shall sell any bonds or notes issued or fully guaranteed by the United States held in trust for its demand depositors without permission of the Board: *Provided further,* That no commercial bank shall at any time use any part of the lawful money or deposits in a Federal Reserve bank held in trust for its demand depositors for the purchase of any bonds or notes of the United States, except that such lawful money or deposits in a Federal Reserve bank as may be received by any commercial bank in redemption of bonds or notes of the United States held in trust for its demand depositors may be reinvested in other bonds or notes of the United States.

(c) Within 1 year from the date of passage of this act, any solvent commercial bank as defined by this act, which has an insufficient total of cash and balances with the Federal Reserve banks and bonds or notes issued or fully guaranteed by the United States, to comply with section 3 (b) of this act, may sell to the Reconstruction Finance Corporation and the Reconstruction Finance Corporation may purchase so much of its other assets as may be necessary to bring its total holdings of cash and bonds or notes as herein specified to the total of the demand deposits of its customers as of the effective date of this act, or such bank may at its discretion increase its capital stock by the sale of additional common or preferred stock to the Reconstruction Finance Corporation and the Reconstruction Finance Corporation is hereby authorized to purchase the stock so offered.

(d) All demand deposits shall be held in trust for the benefit of the depositors and shall not be merged with or become a part of the assets of the bank nor shall they be liable for its obligations.

(e) The Board shall set maximum limits to the service charges which may be made by commercial banks of the several districts against their demand depositors.

(f) The Board shall establish and enforce uniform rules and regulations for the withdrawals by depositors of funds from the savings- and time-deposit departments of all banks subject to its jurisdiction.

MISCELLANEOUS PROVISIONS

SEC. 4. The Treasurer of the United States is authorized to accept for custody and safekeeping for the Federal Reserve banks deposits of gold or silver bullion or lawful money of the United States or gold or silver coin or bullion of foreign countries deposited with the said Federal Reserve banks. The Treasurer, under the direction of the Board, shall keep books of account in which shall be entered all deposits of the said Federal Reserve banks and all withdrawals. Said books of the Treasurer shall show at all times the lawful money held for the account of the said Federal Reserve banks, and the Treasurer shall, at the request of the duly authorized officers of the Federal Reserve banks, and under regulations prescribed by the Board, deliver said lawful money to whomsoever the said Federal Reserve banks may direct, or transfer the title to said money by proper entry upon the Treasurer's books of account.

SEC. 5. (a) The Chairman of the Board shall be ex officio a member of the Board of Directors of the Federal Deposit Insurance Corporation.

(b) Beginning 1 year from the date of passage of this act, the Federal Deposit Insurance Corporation shall insure the full payment of all deposits in all banks subject to the jurisdiction of the Board under the terms of this act (and all such banks shall be deemed to be "insured banks" as defined in section 101 of the Banking Act of 1935), but after this subsection becomes effective no assessment shall be made upon any bank as to its demand deposits.

(c) The Federal Deposit Insurance Corporation is hereby authorized and directed to act as an agent of the Board and, under such rules and procedure as the Board may prescribe, to examine all insured banks without charge. Banks thus examined shall not be subject to examination by any other Federal agency.

(d) The powers in respect to supervision and liquidation of banks now exercised by the Comptroller of the Currency and the Board are hereby vested in the Federal Deposit Insurance Corporation, and such Federal Deposit Insurance Corporation shall add to its existing staff such members of the staff of the Comptroller of the Currency and the Federal Reserve Board as may be necessary to carry out the purposes of this section.

MANDATE TO THE BOARD

SEC. 6. (a) The Board is hereby authorized and directed to use any or all of its powers to bring about and maintain full employment and a stable buying power in the dollar.

(b) The Board is authorized and directed to purchase with lawful money or deposits in the Federal Reserve banks direct or fully guaranteed obligations of the United States, including, but not limited to, obligations issued for the purpose of financing employment of the unemployed, the rehabilitation of agriculture, the provision of low-interest credit to farmers, home builders, and small industry or other recovery purposes. The Board shall carry forward this policy until such time as a condition of practically full employment has been attained or until the buying power of the dollar has been restored to the average level held by it in the year 1926.

(c) Whenever the Board shall find that there is practically full employment or that the buying power of the dollar has been restored to the average level held by it in the year 1926, then the Board shall so announce and shall thereafter use any or all of its powers to maintain the buying power of the dollar as of the date of such announcement and to promote the balanced expansion of production, distribution, and consumption, and full employment therein.

(d) If the Board shall find that the exercise of all its powers is ineffectual in maintaining practically full employment at the stabilization level of the buying power of the dollar provided for in subsection (c) of this section, then the Board shall promptly advise the Congress and the President with recommendations for appropriate legislation and/or Executive action.

(e) The Board is hereby directed to develop a dependable index which shall adequately represent the average buying power of the dollar.

(f) The Board shall supply itself with and publish such statistical and other information as will at all times keep it fully informed in respect to economic conditions in the United States and impending changes therein. Such information shall include, among other things, monthly statistics of (1) the volume of means of payment and its velocity of circulation; (2) production, wholesale prices, sales, orders, and inventories of consumer perishable goods, consumer durable goods, capital goods, agricultural raw materials, industrial raw materials; (3) the volume of savings and investment; (4) the volume of long-term and short-term debt by consumers, business, industry, and agriculture; (5) wages, employment, and unemployment; (6) national income; and (7) such data regarding foreign trade and international capital movements as affect the national economy.

METHODS OF EXPANSION AND CONTROL UNDER CONDITIONS OF STABILITY AND FULL EMPLOYMENT

SEC. 7 (a) It is hereby declared to be the policy of Congress to provide, in an orderly manner and without increase in the public debt, such expansion in the actively circulating volume of lawful money and demand bank deposits subject to check as may be necessary to compensate for the annual increase in population of the Nation and in the productive capacity of its industry, agriculture, and commerce. In order to carry out this policy the Board shall from time to time in return for obligations of the United States, establish deposits in the Federal Reserve banks in favor of the Secretary of the Treasury of the United States in amounts sufficient to maintain a stable buying power in the dollar under conditions of expanding production, distribution, and consumption; and the Secretary of the Treasury shall forthwith apportion such deposits to the accounts of appropriate Federal agencies for prompt disbursement by such agencies in accordance with congressional enactment for any or all of the following purposes: (1) For the payment of pensions or social dividends to such citizens of the United States as shall have been made eligible to receive any such payments by act of Congress; (2) for the making of loans at low interest rates to farmers to assist in the rehabilitation of agriculture and the reduction of farm tenancy; (3) for the expansion of public works, including conservation and development of our natural resources, slum-clearance, low-cost housing construction, and similar activities; (4) for retirement of the public debt of the United States; (5) for payment of the ordinary expenses of the Federal Government.

(b) If at any time after the announcement provided for in subsection 6 (c) above the Board shall find that the volume of lawful money and demand bank deposits in active circulation is not so balanced by the volume of goods and services flowing through the markets of the Nation as to prevent a sharp and inflationary rise in prices, then the Board shall cause the Federal Reserve banks to sell to the public obligations issued or fully guaranteed by the United States Government in amounts sufficient to maintain a stable buying power in the dollar.

SEC. 8. All laws or parts of laws in conflict with this act are hereby repealed.

SEC. 9. If any provision of this act, or the application of such provision to any person or circumstance, shall be held invalid, the remainder of this act or the application of such provisions to persons or circumstances other than those as to which it is held invalid shall not be affected thereby.

SEC. 10. This act shall take effect immediately upon its passage.

SEC. 11. This act shall be known as the Binderup-Voorhis Monetary Control Act of 1939.

Sam D. McReynolds

EXTENSION OF REMARKS

OF

HON. WIRT COURTNEY

OF TENNESSEE

IN THE HOUSE OF REPRESENTATIVES

Tuesday, July 11, 1939

Mr. COURTNEY. Mr. Speaker, as the newest Member of the House save one, it would not be fitting for me to appraise and speak of the work of Judge MCREYNOLDS in this body. From what I have learned, however, since my recent coming, and what I have heard today from the lips of Members old in point of service who worked with him through the years, I have no doubt that his achievements in this body and in the great Foreign Affairs Committee that he headed will be a monument to his memory, eternal and everlasting.

I love to think of him as when I first knew him in the prime of life as a circuit judge in our State, a circuit in which I was privileged to appear as a lawyer at times. As has been said by the gentleman from Wisconsin, there never was a fairer judge and there never was a judge more just. His court was always a model of dignity and decorum, but he found time to be patient and lenient with the younger and untried lawyers who appeared before him. His record of affirmations in our appellate courts was brilliant. In his score of years of service in that capacity his learning and personality left a marked stamp upon the legal history and the jurisprudence of our great State.

Judge MCREYNOLDS succeeded in every relation of life. As a husband he was tender and devoted; as a father, loving and indulgent; as a friend, fine and firm. He was an able lawyer, an outstanding judge, a statesman tall in statue. But above and beyond it all he was simple, kindly, and understanding—a God-fearing, Christian man.

We who mourn his loss today may comfort ourselves in this paraphrase of a modern poetic thought:

Somewhere tonight among the hills of heaven
He'll walk with all God's stars around him;
And we who lost him here on earth
Grow happy knowing God has found him.

The Preservation of American Independence

EXTENSION OF REMARKS

OF

HON. DAVID I. WALSH

OF MASSACHUSETTS

IN THE SENATE OF THE UNITED STATES

Tuesday, July 11 (legislative day of Monday, July 10), 1939

ADDRESS BY HON. BENNETT CHAMP CLARK, OF MISSOURI, JULY 4, 1939

Mr. WALSH. Mr. President, I ask unanimous consent to have inserted in the RECORD the able and patriotic address delivered by the distinguished Senator from Missouri, the Honorable BENNETT CHAMP CLARK, at the American Legion outing at Cape Girardeau, Mo., on July 4, on the subject The Preservation of American Independence.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

My comrades of the American Legion and ladies and gentlemen, we meet again to celebrate the most sacred of all of our holidays—the birthday of the Republic. It is naturally the dearest of all of our occasions for patriotic thanksgiving. It is the anniversary of the day from which stem all of the liberties and blessings which we enjoy today—the Constitution and the Bill of Rights and those inestimable privileges which have followed from those great documents.

It is the anniversary of the day upon which a little group of willful men "with ropes around their necks," as one of their number suggested, well knowing that they would be held personally responsible if the great venture failed, bravely hurled the gage of battle of the American colonists in the face of the tyrannical King of England and his corrupt and tyrannical Parliament.

It is the anniversary of the day 50 years later when within a few hours of each other there died Thomas Jefferson, the matchless penman of the Declaration of Independence, and John Adams, the invincible champion of its adoption upon the floor of the Continental Congress.

That these events so vital and so sacred in our Nation's history have imparted a peculiar significance to this day is natural and in keeping with the eternal fitness of things.

In my own lifetime there has been a great departure in the observation of the day. When I was a boy and indeed when I was a young man before the World War, it was the custom on the Fourth of July for orators, both young and old, to "twist the lion's tail and make the eagle scream."

None of us wishes to do that today, particularly none who remembers the fact that amid the greatest carnage of history American doughboys, and British Tommies, Scotch Kilties, and the big boys from Canada went up to the charge together to smash the Hindenburg line and win decisive victory in the most tremendous war of all time.

Today we prefer to emphasize the wisdom and the courage of those fathers of our Republic who risked their lives to set up in this continent a government dedicated to the principle that men are fit to govern themselves rather than to dwell upon the faults of the English King and courtiers whose tyrannical acts drove our forebears into revolution.

It is rather for us upon this day to rededicate ourselves to the immortal principles upon which this Republic was founded and to pledge ourselves to the principle that the system of government set up by the fathers shall be preserved and we will not permit

our own liberties to be jeopardized by allowing the United States to drift into alliance with any nation in the world or into a situation where we may become involved in the power politics of the other hemisphere.

I speak feelingly upon this question and to no one could I speak with more frankness or more confidence than to my comrades of the American Legion, that great organization of men who have worn the uniform of the United States in time of stress and have learned through hard reality what war is.

Upon you, my comrades of the World War, members of an organization especially dedicated to the preservation of American institutions, I urge the proposition that the greatest contribution which the United States can possibly make to the preservation of democracy in the world is to preserve democracy in America, to maintain intact our own constitutional institutions, and to resolutely refuse to be drawn into the quarrels or rivalries based upon the trade or territorial aspirations of any other nation in the world.

It is a fact, lamentable but true, so plain that he who runs may read, that today, more than two decades after the conclusion of the "war to end war" and to "make the world safe for democracy," war clouds are again darkening the horizon.

The post-war era has definitely passed and the world is once again wallowing in a pre-war situation—that precarious condition where jealousies and hatreds between nations have been fanned to such a pitch, where international suspicion has been so acutely aroused, where excessive competition in armaments on every side has so set the hair trigger of calamity, that the bad temper of a dictator, the ineptness of a diplomat, or the crime of a fanatic may loose irradicable disaster upon the world.

One does not need to be an alarmist to recognize the threats of war in portions of the world that makes the danger of far-flung combat more imminent than it was at this season of the year 1914. Who of us that remembers back to that tragic autumn will ever forget the shock with which we learned that hostilities on a major scale, so long prepared for, had actually begun? Who would assert that the skies are not now much more threatening than in July of 1914?

Far worse and far more tragic in its implications, so far as the welfare of the United States is concerned, is the fact that already we are much farther along the road to actual involvement and active participation in the next European war, even before it develops, than we were even 3 months before our own entrance into the last war after 2½ years of carnage abroad.

Already the effort is being made to have us choose sides and commit ourselves to one set of prospective belligerents before so much as a single gun is fired in the war. Already the effort is being made to bring about commitments on our part which will again set our feet upon the path which inevitably leads to war. Already while we are still talking about our obligation to make the world safe for democracy there is being made the suggestion of our responsibility to participate, if necessary, in another "war to end war" in which we will again send the best and bravest of our youth to die on foreign fields in Europe or Asia, thousands of miles from home in quarrels which do not in any degree whatever concern us—questions of power politics; questions of the British prestige in the Orient and their right to hold Hong Kong, which they took by force from China in the infamous Opium War; questions of the conflicting claims of France and Italy to Tunisia, in which neither has any rights except those acquired by force; questions of who shall have Danzig; questions of disputes between Germany and Poland, both of which actively collaborated within the year in the rape of Czechoslovakia with the benign approval and connivance of Great Britain and France as well as Italy.

This is in line with the blunt suggestion made within the week by Foreign Minister Bonnet of France that it is the duty of the United States to now enter into alliance with France, Great Britain, and Poland and possibly Communist Russia and to promote peace by joining one power group in Europe to insure its preponderance over another.

Incidentally, most of those in this country who are so eager for our involvement in war would fight the war in editorial sanctums or in clipping coupons in counting houses or in indulging in fervid oratory in the safe precincts of the United States Congress.

Already some high Government officials, including some eminent Senators have contributed what they could toward bringing us into conflict by consistently thumbing their noses and making faces and shaking their fists at certain nations abroad. Already while they still owe us nearly a score of billions of dollars from our advancements to them in the last war, the nonpayment of which is largely responsible for the continuance of our 10-year period of economic depression, plans are already afoot to permit these European nations to make so-called token payments; that is an insignificant portion of their old debts and in return be permitted to make new raids upon the Treasury of the United States, either in preparation or for the prosecution of a new and even more dreadful war. Already while there is talk of our efforts being limited to "measures short of war" the effort is being made to commit us to policies which must inevitably lead us not only into participation in war but into bearing the financial burden of the whole war and in all probability a large portion of the military burden as well. More than a year ago I charged in the Senate on my responsibility as a Senator that the Nation was to be subjected to a deliberate, amply financed, ably lead propaganda participated in by high officials of the Government, including high-ranking officials of the Army and Navy to make this country war-minded and to prepare public opinion for another costly adventure abroad. That prediction has literally come to pass and we have had in the public press, over the radio, and in the utterances and writings of high public officials the effort to lash our people into the pre-war frenzy which will ultimately lead to our being called upon to offer up hundreds of thousands of lives and billions of dollars of our national wealth in quarrels with which we have no direct concern.

The desire to keep the United States from involvement in any war between foreign nations is still very strong today—well-nigh universal in spite of all of the efforts of all of the propagandists to involve us in war. But we cannot forget that there was an almost equally strong demand to keep us out of the last war. In August 1914 no one could have conceived that America would be dragged into a European conflict in which we had no part and the origin, ramifications, secret commitments, and aims of which we did not even understand. Even as late as November 1916—after more than 2 years of carnage in Europe—the American people re-elected Woodrow Wilson "because he kept us out of war," and yet 5 months later we were fighting to "save the world for democracy" in the "war to end war."

To those who participated in that struggle how hollow those slogans seem tonight.

In the light of that experience it is high time that we seriously apply ourselves to the hard practical question of just how we propose to avoid war if war comes again. No one who has made an honest attempt to face the issue will assert that there is any easy answer. No one who has studied the history of our participation in the World War will tell you that there is any simple way out. There is none—no simple panacea, no magic formula. But if we have learned anything at all we know the inevitable and tragic end to a policy of drifting and trusting to luck. We know that however strong is the will of the American people to refrain from mixing in other people's quarrels, that will can only be made effective if we have a sound, definite policy from the beginning. No lesson of the last war is more clear than that such a policy cannot be improvised after war breaks out. It must be worked out in advance before it is too late to apply reason. I say with all possible earnestness that if we want to avoid participation in another war we must have a definite policy beforehand based upon an understanding of the problem confronting us.

I frankly confess that I make no pretension of knowing of a policy which can provide an absolute and infallible guaranty against involvement in war. Certainly there is no such policy which can be written into law or enacted as legislation. The only sure way to avoid involvement in another war is for another war not to break out. I have advocated preventive measures and I have supported disarmament and settlement of disputes by peaceful means. But if these fail, or if nations insist on arming to the teeth for conflict and that conflict comes, then I insist that we must do everything in our power to stay out. And I believe that the United States can stay out of the next war if it wants to and if it understands what is necessary to preserve neutrality and is willing to pay the price for peace. Such a policy means the sacrifice of the transitory profits which come from war mongering and trafficking in death. It will be far, far cheaper for us in the long run in blood and treasure and in the perpetuation of our most sacred institutions. It will cost us millions, but it will save us billions. It will save us from footing the bills for other nations whose aims are not our aims and whose democracy is not our democracy. It will save us from sacrificing the flower of our youth—your boys and my boys—in quarrels in which we have no interest.

Most people realize that some sacrifices must be made if we are to do this. Certainly all who have thought about its possibilities do.

To accomplish it we must cheerfully sacrifice the chance for quick and big profits, the possible temporary expansion of our exports and resulting employment at good wages for persons who might engage in making war exports. We must deprive American ships of cargoes that would pay excellent freight rates. We must deprive American bankers and investors of profitable commissions and high-interest investments. (The Morgan firm alone drew down $30,000,000 for acting as purchasing agents for the British Government in the last war.) We must not permit American insurance companies to underwrite war risks, no matter how attractive the rates.

But in the long run I am sure that it will cost us far less—that everyone concerned in America will be better off, even financially, to say nothing about human suffering, loss of life, and the other horrible consequences of our being dragged into another war.

It was profitable exports, the high interest loans, the war-risk insurance, yes, even general employment at high wages and high prices for our farm products which dragged us into the World War in 1917 and is also largely responsible for the depression and agony from which we are still struggling to emerge.

We want something which is very real and very dear to our people—peace—and we must be willing to pay the price for it; though we can be comforted by the fact that the price represents a real bargain. The quick profits of war exports and other unneutral activities inevitably come home to roost.

In line with this policy and with the overwhelming sentiment of the American people, Congress has in the last few years passed and the President of the United States has signed three measures which, taken together, embody the neutrality law of the United States. I am proud to have been one of the authors of the original resolutions upon which the first Neutrality Act was based.

The present act is by no means perfect. It represents much less than the proponents of the original law advocated and sought to provide. But, imperfect as it is, the present neutrality law does take the American flag off of munition ships. It does prevent loans and credits to belligerents, resulting in pre-war inflation and tend-

ing to involve us in the affairs of other nations. It does prevent us from entering upon the fake, spurious prosperity which depends upon the ghastly trade in munitions and instruments of death. It does prevent the American flag being used as a shield to protect a handful of American adventurers in their pursuit of the tear-rusted, blood-stained gold to be made by trafficking in the agonies of other people.

The present Neutrality Act, passed by an almost unanimous vote of both the Senate and House and signed by President Roosevelt, is now under vicious attack in the press and in the Congress. As I predicted would happen more than a year ago, a most serious effort is now being made to break it down and to destroy our theory of neutrality.

Let me say at the outset that the remark frequently heard that the Neutrality Act has been proved a failure and therefore should be changed is fallacy pure and simple and takes no account whatever of either the law or the facts. The Neutrality Act could not have been proved a failure, because the Neutrality Act has never been invoked. On the other hand, the President has flatly disregarded the plain terms of an act which he signed himself and has flagrantly disregarded the specific provisions of the law which required him to put the Neutrality Act into effect in the case of existing war between Japan and China.

The excuse is made that there is doubt as to the application of the Neutrality Act to undeclared wars. But there is nothing in the act itself which makes possible any such construction. Nor is there anything in the act which leaves any discretion in the President, after he has made a simple finding of fact based upon ordinary evidence. The law does not mention declarations of war. The law says, and I quote: "Whenever the President shall find that there exists a state of war between or among two or more foreign states, the President shall proclaim such fact, and it shall thereafter be unlawful to export, or attempt to export, or cause to be exported arms, ammunition, or implements of war from any place in the United States to any belligerent state named in such proclamation or to any neutral state for transshipment to or for the use of any such belligerent state." Here is no delegation of discretionary power. Here is only the imposition of the simple duty of ascertaining facts with, of course, the implication that the task of finding the facts will be diligently pursued and the finding of facts honestly made.

Certainly I would not so far reflect upon the intelligence and information of the President of the United States as to suggest or intimate that he does not know that a state of war exists between Japan and China. Everyone in the world knows that. But if such a state of war does exist, then the obligation of the solemn public statute of the United States is upon the President, and has been upon him, to impose an embargo on munitions. Yet, despite a universally recognized fact the United States has gone ahead supplying Japan with the instruments of death. The Chinese-Japanese situation does not represent a failure of the neutrality law but a failure of the executive department of our Government to enforce the plain provisions of a public statute.

Furthermore, I should like to point out that the application of the Neutrality Act to Spain had nothing whatever to do with the principles or provisions of the original Neutrality Act and proceeded upon an entirely different and diametrically opposite theory. No such provision was contained in the act as originally introduced by Senator NYE and myself. That provision was contained in a special resolution introduced by Senator PITTMAN at the urgent request of the State Department and rushed in for passage under whip and spur under the excruciating wail that a sudden emergency existed. Even if the noble PITTMAN and the distinguished experts of the State Department are now prepared to repudiate their own brain child—with which I am in entire agreement—it has nothing on the face of the earth to do with the real Neutrality Act, which, I repeat, has never been tried, which has never even been invoked.

The present Neutrality Act was not only signed by the present President of the United States; it drew its original inception from him. Without violating the rule against quoting the President, I think that I may say with all propriety that the inception of the present neutrality law was in a conference between President Roosevelt and the full membership of the Senate Munitions Committee, followed a few weeks later by a conference at the White House between the President, Secretary of State Hull, Senator NYE, and myself.

At the present time there are several major proposals for amendment of the present Neutrality Act before the Congress. As soon as I finish this speech I am going to drive to Memphis to catch a plane for Washington in order to attend the meeting of the Senate Foreign Relations Committee to begin the consideration of these proposals.

The principal suggestions which will be before our committee tomorrow may be briefly summarized.

First, there is the proposal by Senator THOMAS of Utah for returning to the old League of Nations theory of sanctions, the failure of which was notably exhibited by the complete failure of the proposed Hoare-Laval sanctions against Italy. To choose any aggressor nation and impose sanctions is to choose sides and commit an act of war. It commits us to a war without the people of the United States knowing that we are doing it. It takes us down the path of foreign entanglements against which Washington and Jefferson, Monroe, Madison, and the Adamses solemnly warned us and prayed over us.

There are in the United States perfectly honest and intelligent people who conceive that it is our destiny and our duty to act as policeman for the world, to send American boys to die on foreign fields, to protect Great Britain and France and Russia in the far-flung dominions which they have taken by ruthless force throughout the years. Those who hold such a view should support the Thomas amendment. I do not, and therefore I shall oppose it with every vigor at my command.

There are those who regard war in the world as inevitable, and who conceive that in the event of such a war it will be inevitable or may be desirable for the United States to be drawn into the war, to bear the principal burden of the war, and to make the major sacrifices both of men and money. Those who adhere to such a view should logically support the Thomas amendment. Some of us who hold no such view will resist it to the utmost limit of our mental and physical endurance.

In brief, the Thomas amendment is a proposal for us to choose up sides, even in advance of war, and to commit ourselves once more to a foreign war. Against it I solemnly protest, and I promise that no such policy will ever be enacted into law as long as some of us are able to stand upon our feet in the United States Senate and discuss the issue. Another proposal is that of my friend, the distinguished chairman of the Foreign Relations Committee, Senator PITTMAN, of Nevada. His bill contains certain very meritorious features. It makes mandatory the operation of the Neutrality Act in the case of an undeclared war as well as a war following a formal declaration. I favor this, although I do not believe it to be necessary if the President could be brought to carry out his plain duty under existing law. He reinstates and makes permanent the so-called cash-and-carry provisions of the old act which expired by limitation on May 1. I favor that. But the Pittman bill wipes out the embargo now imposed by law upon the exportation of munitions to contending countries. It puts us again into the category of a nation building up a spurious prosperity by the sale of death-dealing agencies to one set of belligerents as against another set. It puts our feet again on a path which must lead inevitably to war. In its original form, Senator PITTMAN'S bill makes us the ally of Great Britain and France in the Atlantic and of Japan in the Orient. For if we are to sell munitions on a cash-and-carry basis that is the unescapable result. When the result of his own measure was pointed out to Senator PITTMAN he introduced a new resolution imposing sanctions upon Japan. I do not like Japan. I do not like its ideology or its conduct. But I am not willing to send American boys to fight 7,000 miles from home in order to back up Senator PITTMAN'S hatred of Japan.

The third proposal is a bill introduced by Senators NYE, BONE, and myself. It is very simple. It simply continues the existing law with a few simple amendments. It makes the duty upon the President apply to an undeclared as well as a declared war. And in case the President does not perform his fact-finding function as to the existence of a state of war, it permits Congress, by concurrent resolution, which does not require the approval of the President, to make the necessary finding of fact.

If the United States actually desires to keep out of war this seems to be the way. It provides by processes recognized by our Constitution the means of doing it.

The measure which will probably be before the Senate committee for consideration tomorrow morning is the Sol Bloom bill, recently passed by the House in very modified form, favored by the State Department and introduced into the House by Representative SOL BLOOM, of New York, the man who made George Washington famous.

In its original form the Sol Bloom antineutrality bill accomplished only two major changes in the existing law.

First. It would permit any President of the United States to mark out fictitious zones on a map into which American ships and citizens could not enter. In other words, if a President ever chose to do so, which, God forbid, he would have the power under this act to put one belligerent out of bounds and another in bounds. A proposition more calculated to get us into war can hardly be conceived.

Second. It repealed the present provision of the law imposing an embargo upon "arms, munitions, and instruments of war."

This is the crux of the whole controversy which will be taken up for consideration by the Senate tomorrow.

The issue bluntly stated is this: Shall the United States choose sides by agreeing in advance to act as the arsenal and purveyor of arms to one set of prospective belligerents as against another or shall we let the world know that we propose to stay out of foreign entanglements?

No one who has studied the tragic course of events which led to our participation in the World War can doubt that the great involvement of the United States in the munitions trade with its accompanying tremendous inflation and the huge investments of capital on behalf of one set of belligerents led us into the World War. It seems to me inconceivable that to again indulge in the practice of putting our money on one horse could result in nothing except our own final involvement.

Let us remember the words of Washington:

"Europe has a set of primary interests which to us have none, or a very remote, relation. Hence she must be engaged in frequent controversies, the causes of which are essentially foreign to our concerns. Hence, therefore it must be unwise for us to implicate ourselves by artificial ties, in the ordinary vicissitudes of her politics, or the ordinary combinations and collisions of her friendships and enmities.

"Our detached and distant situation invites and enables us to pursue a different course * * *."

I appeal to my fellow citizens and particularly to my comrades of the American Legion for the old American way, the way under which our fathers and mothers have lived, the way of the American Constitution. And to perpetuate that way I am certain that it is necessary for us to avoid entanglements with the quarrels of any nations whatsoever. Let us preserve democracy in the world by preserving democracy in the United States of America.

Net Weight and Cotton Bagging Versus Gross Weight and Jute Bagging

EXTENSION OF REMARKS

OF

HON. HAMPTON P. FULMER

OF SOUTH CAROLINA

IN THE HOUSE OF REPRESENTATIVES

Monday, July 10, 1939

Mr. FULMER. Mr. Speaker, under leave to extend my remarks on the net-weight cotton bill, I want to give some concrete information as to just what the selling of cotton on a net-weight basis will mean in the way of savings from many angles, which, as stated in my speech on the floor of the House in behalf of H. R. 57 some days ago, would go into the pockets of the producers of cotton.

It is pitiful to hear any sensible man stand up and make the statement that farmers are paid for the 21 pounds of bagging and ties placed on a bale of cotton when sold under the present gross weight selling of cotton.

Listen to a statement made by Mr. John W. Clark, Wardman Park Hotel, Washington, D. C., in communicating with me about the net-weight bill:

I would like to generalize on the burden which is being placed on the cotton industry due to the improper covering of cotton bales and the tare (bagging and ties) basis for trading in cotton. These calculations are based on a 15,000,000-bale crop a year and 10-cent cotton and are, of course, approximated estimates:

Unnecessary freight expense due to excess bagging weight	$1,500,000
Cotton damage from tie rust and stencil ink stain	----------
Labor at mill picking cotton from bagging and fibers from cotton	9,750,000
Loss of cotton left in bagging which is impossible to remove, average 1 pound per bale	1,500,000
Decrease in insurance premium expense and loss by fire not covered by insurance through better bale protection	3,750,000
Total	16,500,000

Listen to the Department of Agriculture, taken from a booklet entitled "American Cotton—Tare, Practice, and Problem":

ADVANTAGES AND DISADVANTAGES TO MARKETING AGENCIES

Marketing agencies are concerned with the tare on the gin bale as purchased from growers and with changes that are made at interior or port compresses. Any economies or added costs resulting from the standardization of tare would directly affect the operating margins of such agencies.

Possible advantages to the cotton trade that would result from tare standardization are: (1) Savings in freight costs; (2) simplification of trading practices that would result from the removal of uncertainty as to weights, including the elimination of (a) cost of taring, (b) unfair price competition, and (c) controversy between buyer and seller; (3) savings in customs duties; (4) savings in insurance; and (5) sales advantage of a neater package.

It is my understanding that patching on bagging after it leaves the farmer to bring the total amount of bagging up to the trade-practice requirements in selling to various cotton mills and for export, those who do the patching make at least a 50-cent profit on each bale.

Listen to this statement coming from the Department of Agriculture, which they state would operate against the cotton trade, and certainly the farmer is not a member of the cotton trade:

Elimination of profit in patching: If transactions were conducted on the basis of net weight, the patching of cotton would be a direct charge against the shipper, and the possibility of selling such patches at the price of cotton would be completely eliminated.

CUSTOMS DUTIES ON WASTE

In my speech some days ago I did not call to your attention a very important matter in connection with the selling of our cotton in certain foreign countries, and the savings which would accrue to the cotton industry, which, as usual, comes out of the farmer's price, on account of customs duties on excess tare, jute bagging.

Listen to this statement coming from the Department of Agriculture:

Savings in customs duties: A number of foreign countries that use American cotton levy import duties or special taxes on imports of raw cotton. In the case of Italy, Poland, Spain, and France these levies are based on the gross weight of the shipments so that excessive weight of bale coverings is penalized.

Since American cotton exported to foreign markets now carries approximately 6 percent tare, whereas most foreign bales carry less than 3 percent, the duty on the additional 3 percent tare, amounting to about 15 pounds per bale, places American cotton at a disadvantage in competition with cotton of other growths. The extent of this competitive disadvantage depends in each case on the amount of the import duty or special tax. At present rates of exchange these duties on the extra tare of American bales amount to about 40.4, 27.5, 6.4, and 0.3 cents per bale for Poland, Italy, Spain, and France, respectively. These amounts may appear insignificant, but they totaled approximately $250,000 for the American cotton exported to those four countries during the season 1931–32.

Take, for instance, Poland. The 15 pounds of surplus bagging, which includes the 9 pounds patched on by the exporter because of the rate of duty, amounts to 40.4 cents per bale.

When we talk about savings to a great many people who should be interested in cotton, they do not stop to think that this duty paid on the American disgraceful bale, according to a statement of the Department of Agriculture, amounts to $250,000 annually.

I am wondering if the jute interests would deny the fact that this amount of money actually comes out of the pockets of the people who produce cotton in the United States. Certainly the exporter does not pay it out of his profits; if so, his profit could stand for a cut and same could be added to the farmer's price.

WHO IS MR. CLARK?

I feel sure that someone in reading these remarks, after looking the figures over submitted by Mr. Clark, especially those who oppose this legislation, will ask, "Who is Mr. Clark?"

Well, to back up Mr. Clark's figures, I am submitting the following, which came from the Department's Bulletin of 1933, page 51.

You remember Mr. Clark's statement in connection with the items of stripping and picking cotton from the jute bagging amounted to a total of $9,750,000.

Listen to the Department as to real facts secured from 347 American mills distributed through the various mill centers:

Estimated damage to cotton from faulty methods of packaging square bales, season 1930–31

Source of damage	Quantity of cotton damaged per bale
	Pounds
Ink stains	0.35
Oil and paint stains	.38
Rust stains	.28
Weather, and other	.99
Total	2.00

Average losses as reported by 347 American mills distributed throughout the various mill centers.

On a crop of 15,000,000 bales of cotton selling at 10 cents per pound, the quantity of cotton damaged per bale of 2 pounds according to this statement would amount to $3,000,000 annually, and as stated these are actual figures submitted by the cotton mills who do the stripping and picking of this cotton.

I am wondering if there is any Member of Congress, or of the jute interests, who will stand up and state that this

$3,000,000 comes out of the cotton buyers and the cotton mills of the country instead of the farmers, who produce this cotton.

No wonder thousands of our farmers annually are losing their farms, and these organized, monopolistic groups are growing richer.

I wish that you would get a copy of this booklet from the Department of Agriculture, dated April 1933, so as to get additional information, and, especially, concerning State laws relating to cotton tare; that is, the amount of bagging and ties allowed in baling cotton in the various States.

TRADE RULES AND REGULATIONS

Listen to some of the trade rules and regulations by various State cotton exchanges governing the tare—bagging and ties—allowance in connection with gross-weight selling:

Galveston Cotton Exchange and Board of Trade: Trade rules (effective Sept. 5, 1932):

"Rule III. General trade rules governing 'factors' terms, 'f. o. b. shipside, Galveston' terms, 'landed or to arrive,' and 'guaranteed through terms'

"SEC. 22. The cotton shall be pressed or packed in what is commonly known as square bales, covered or wrapped with one layer of sound bagging, and, in case of uncompressed bales, bound with six flat, metallic bands of regulation weight and size that have not been spliced, the combined weight of bagging and ties not to exceed 22 pounds."

Georgia: Park's Annotated Code of Georgia, 1914, volume 1, thirteenth title, chapter 3:

"ARTICLE 1. Deduction from gross weight may be mutually agreed upon, but it shall not be more than 24 pounds if the bale is covered with jute bagging and not more than 16 pounds if covered with cotton bagging, except in the case of any bale or package of cotton not fastened with iron ties nor with ropes, in which case the deduction shall not be more than 10 pounds if it is covered with jute bagging and not more than 5 pounds if it is covered with cotton bagging.

"SEC. 558b. It is unlawful to deduct any sum for bagging and ties when their weight does not exceed 6 percent. Only the excess over 6 percent may be deducted."

Atlantic Cotton Association: Trade rules:

"Rule 2, clause 1 (d): Cotton shall be packed in square bales and covered with one layer of sound bagging. Uncompressed bales shall be bound with 6 flat metallic bands of regulation weight and size which have not been spliced. The combined weight of bagging and ties shall not exceed 22 pounds per bale."

California-Arizona Cotton Association: Trade rules (1931):

"Rule C 2, clause 1 (d): Cotton shall be packed in square bales and covered with one layer of sound bagging, preferably jute. Uncompressed bales shall be bound with 6 flat metallic bands of regulation weight and size which have not been spliced. The combined weight of bagging and ties shall not exceed 20 pounds per bale."

Oklahoma State Cotton Exchange: Trade rules (amended to November 1931):

"Rule II, clause 3: Cotton must be covered with one layer of sound jute bagging and bound with 6 regulation flat metallic bands, total weight of bands not to exceed 9 pounds. Total weight of bagging and ties must not exceed 21 pounds per bale, any excess to be deducted at invoice price of cotton."

Louisiana: No laws found.

You will note from these trade rules that the tare allowance—bagging and ties—varies in the different States, all of which brings about considerable extra expense in the buying and selling of cotton, which, naturally, comes out of the producers of cotton.

In other words, we have 7 States with a 22-pound allowance; 1 State, 19½; 2 States, 24 pounds; 1 State, 24¾; and 1 State with 22½-pound allowance. What a mess.

If only we had net-weight selling under my bill (H. R. 57), which provides for the establishing of tare standards, with the actual weight of bagging and ties marked thereon, all of which would eliminate all of this stripping, weighing, and the making of claims, which amount to a considerable sum of money annually, this expensive mess would be eliminated.

Listen to the Department of Agriculture in connection with what I have just been talking about:

In all of these markets weight of tare is determined by actually stripping and weighing approximately 10 percent of the bales in each shipment. The weight of ties for the total shipment is calculated in each case by multiplying the average weight of ties tested by the total number of ties for the entire lot.

The total weight of bagging and patches is calculated somewhat differently in the various markets. In the Liverpool and Milan markets the weight of bagging and patches for the entire shipment is calculated on the basis of the exact relative proportion of the weight of the bales stripped to the total weight of the entire shipment. For all other European markets the total weight of bagging and patches is arrived at by multiplying the average weight of these materials for the bales tested by the total number of bales in the shipment.

It has been estimated that approximately 80 percent of all shipments of American cotton to European markets are tested for tare at an average cost of 15 cents per bale. Data are not available concerning the extent to which these shipments are overtared or undertared.

You will note from this statement made by your Department of Agriculture that approximately 80 percent of all shipments of American cotton to European markets are tested for tare at an average cost of 15 cents per bale.

According to the number of bales we export you will note that this 15 cents per bale will amount to from $750,000 to $1,000,000 annually.

Is there a Member of Congress or any other citizen in this country who believes that those who handle our cotton for export pay this amount? Oh, no; as usual, it comes out of the pockets of the producers on account of the wasteful and disgraceful method of baling and the selling of our cotton on a gross weight basis.

Here is a most interesting statement of facts contained in the agricultural booklet as to how the exporter buys and sells American cotton:

The American export shipper buys his cotton in this country gross weight, but must sell it abroad net weight, hence in buying he must consider the weight of bagging and ties in his price calculations. He does this by adjusting his buying price downward to make allowance for the weight of covering materials for which he must pay the grower but which will be deducted when he in turn sells in the foreign market. If the exporter can get 10½ cents per pound net for cotton and the tare is 24 pounds per bale, the equivalent value would be 10 cents per pound gross weight, while if the bale carries 30 pounds of tare the value would be 9.87 per pound. In other words, buyers in the primary or farmers' markets of this country have to purchase cotton from the producers on gross weight at prices which will enable them to sell the same cotton in foreign markets at a profit on the basis of net weight. They are forced, therefore, to pay lower prices than would be the case if purchases were made on net weights. Thus the grower does not receive a greater return per bale on the gross-weight basis because, in the final analysis, price calculations are based on the net weight of the cotton contained in the bale.

The Department plainly states that the exporter buys his cotton in this country on a gross-weight basis but must sell it abroad on a net-weight basis, because all cotton bought and sold in foreign countries is based on net weight.

This statement should certainly satisfy any Member of Congress, as well as any other citizen, who has in the past been laboring under the false belief that cotton farmers are actually paid for bagging and ties when selling their cotton on a gross-weight basis.

I realize that there are many farmers today who believe, because of the propaganda that has been put out by the jute interests and the handlers of jute bagging, that they actually get paid for their bagging and ties, and I regret exceedingly that we have some Members of Congress who, while they understand that this belief on the part of farmers is absurd, continue to vote against net-weight legislation on the grounds that they may not be able to fully explain this situation to thousands of innocent and helpless cotton producers.

In other words, it is much easier to join with the jute interests, taking the road of the least resistance, rather than voting conscientiously in the interest of those whom they represent.

The Department will also tell you that definite agreements were entered into by the cotton-exporting interests of this country and foreign buyers in 1932 whereby settlement for cotton exported would be made on a net-weight basis after deducting bagging and ties, amounting to 30 pounds per bale.

Now, if this is true, why proceed to put on 30 pounds of tare, in that 15 pounds of this amount is useless, wasteful, and expensive, in the way of the purchase price of this material and excess freight on same?

COTTON INSURANCE

I have made the statement all along that the American bale carries the highest-price insurance of any bale of cotton packed anywhere in the world.

To prove this, I am quoting the Department of Agriculture:

Comparisons between insurance rates in European markets on American cotton which is usually covered with wide-mesh jute bagging, and on Egyptian cotton which invariably is covered with closely woven burlap, show that rates on American cotton are considerably higher. Rates reported for cotton stored in fireproof warehouses in Liverpool in June 1932 were 8s. 0d. ($1.44) percent for American cotton and 5s. 0d. ($0.90) percent for Egyptian cotton. This difference in rates may be attributed largely to differences in the nature and condition of the baggings, but the relative densities of the bales (approximately 32 pounds).

To further prove my contention, and the complaint on the part of foreign buyers and millers about the type of the American bale, I am going to quote at this point a letter addressed to the Chamber of Commerce of the United States, Washington, D. C., signed by the American Chamber of Commerce, Robert Dollar Building, P. O. box 357, Shanghai, China:

AMERICAN CHAMBER OF COMMERCE,
Shanghai, China.

CHAMBER OF COMMERCE OF THE UNITED STATES OF AMERICA,
Washington, D. C.

GENTLEMEN: American insurance interests in Shanghai have brought to the attention of the chamber the unusually heavy losses suffered by insurers as a result of cotton fires on Shanghai wharves during this year and have requested that steps be taken toward improving the packing of American cotton, which is considered a prime factor in the recent disastrous experience.

It is pointed out that there have been three serious fires in American cotton cargoes in the short period of 14 weeks.

The first fire occurred on December 25, 1931, and involved baled American cotton which had just been discharged from the steamer *Forthbank* onto the Shanghai & Hongkew Wharf Co.'s west wharf. A total of 5,575 bales was destroyed with a net loss of 642,000 taels to insurance companies after salvage had been completed. The cause of this fire was never ascertained, but the flames spread from end to end of the warehouse with great rapidity.

The second fire occurred in January and involved the one-story brick-built godown No. 7 on the east wharf of the same company, damaging 1,650 bales of cotton, as well as other cargo with it, and causing the insurance companies the net loss after salvage of 217,000 taels.

The third fire, which took place on April 5, involved the remnants left from the second blaze and caused a net loss to insurance companies of 28,000 taels.

In August last, a fourth fire occurred on the modern, concrete, fire-resisting wharf of the Robert Dollar Co. at Shanghai. Final figures of the loss on this occasion have not yet been computed by the adjusters, but it is estimated that the loss to insurers will not be less than 55,000 taels.

It is pointed out that in several instances the flames spread with great rapidity and that within a comparatively short time of the discovery of the fire, the whole of each warehouse seemed to be in flames. The speed with which fire runs through bales of American cotton is attributed by insurance men, adjusters, and shipping men at this port to the inferior packing of the American commodity and the fire hazard inherent in the condition of the bales when they arrive here. This is obvious to anyone who has watched a cargo of American cotton being discharged at Shanghai. Out of any lot of 100 bales, selected at random, the majority will have many broken hoops and the gunny bags covering will be so badly torn that the cotton is exposed at both sides and the ends of the bales, whilst there are always trailings of loose cotton around the edges. It is this which causes heavy losses through rapid expansion from the seat of the fire, whereas the blaze might have been confined to a small area had the cotton been properly packed. It is pointed out by the competent underwriters that a few hundred bales of American cotton in a godown constitute a risk just as serious as if the warehouse were stacked with loose cotton. In this connection, attention is drawn to the fact that in the first fire not one package in a shed of 270 feet long escaped damage.

Shanghai is not the only place to which American cotton is exported and it is felt that any efforts toward correcting the situation created by inferior packing at home would be a real service to the American exporter as well as to American insurance and transportation firms.

Your assistance in bringing this matter to the attention of exporters at home would be greatly appreciated.

Yours very truly,

AMERICAN CHAMBER OF COMMERCE,
D. K. KING, *Secretary.*

DISGRACEFUL BALE

In my efforts to improve the American bale of cotton by bringing about a uniform tare standard and net-weight selling so that we could compete with the neat package from every other cotton country in the world, I made the charge that the American bale is the most disgraceful of any bale of cotton on any market in the world.

In connection with the hearings held before the Agricultural Committee of the House on my net-weight bill, Mr. Holt, a foreign representative of the Agricultural Department, appeared; and to back up my statement about the American bale being the most disgraceful type of bale entering any market in the world, I want to quote Mr. Holt at this time:

Mr. JONES. Then, in order to make the remedy complete, you would not only need to have the same amount of bagging and wrapping but would also need to have a net-weight basis of sale in this country, would you not?

Mr. HOLT. Yes; that is what I refer to particularly.

Mr. JONES. It would take both plans to compete the remedy?

Mr. HOLT. Well, yes; I think so; to get it on a proper basis. One of the strongest indictments, I think, against the present method of handling American cotton is that in scarcely no two markets are the tare requirements the same. You take the three big futures exchanges—New York, Chicago, and New Orleans—and the tare requirements in no two of those markets are the same. Then you take your local State exchanges, which refers to the gin bale, and there is a variation right straight through almost in every spot market, showing no uniformity with regard to tare allowed. And that leads to all kinds of trouble in the cotton business. When the crop is moving in the early part of the year, compresses frequently become congested for want of space, and they will ask shippers to compress their stock and hold it for shipment, and the shippers will have to tell them they cannot do that, because they do not know what will be the ultimate destination, and if it goes to an eastern mill it will take one patch, and if it goes for export it will take another patch.

* * * * * * *

Here is an item I might mention in this connection. I have before me a statement of the American, Egyptian, African, and East Indian cotton, and the amount of tare put on the American bale is at least double that put on any other bale, practically, and more than double some of it. And they are all better bales; all of those other foreign-grown cottons are infinitely better than our American bale.

Mr. FULMER. Right at that point, Dr. Holt, I would like you to tell these people about the condition of American cotton when it arrives. You have been over there when they have unloaded this cotton and noticed it on the platform, and you know the condition in comparison with the other cottons.

Mr. HOLT. The American cotton, the condition of it when it arrives in Europe, is really considered a disgrace. It is far below the condition of any other cotton. I have talked to European merchants in my work about a better American bale, and they will agree it should be better; but I think anything that is done about it will have to come from this side.

You will note that Mr. Holt states that the amount of tare used on American bales amounts to just twice the number of pounds of tare used on foreign-grown cotton.

He states also that the condition of our cotton when it arrives in Europe is really considered a disgrace by foreign buyers and spinners, referring to the manner in which the bale is packed and the type of bagging used, and so forth.

DO FARMERS GET PAY FOR BAGGING AND TIES?

The Department of Agriculture, in making an investigation about selling cotton on gross and net weight, as to the question of whether or not farmers actually secure pay for their bagging and ties, I am submitting the following facts and figures:

PRICES TO AMERICAN COTTON MILLS

Similarly, the American spinner who buys cotton in competition with the exporter, as a matter of fact, does not pay the same price for bale-covering materials as he does for cotton. Any given bale of cotton would be purchased at the same price per bale whether on a net or on a gross weight basis, but the price per pound would be an entirely different figure in each case. For a bale of 500 pounds gross, the equivalent values per pound for the gross and net weight bases with various weights of tare would be as shown in the following tabulation:

Gross weight of bale	Weight of tare	Net weight of bale	Price based on net weight	Price based on gross weight	Value per bale
Pounds	*Pounds*	*Pounds*	*Cents*	*Cents*	*Dollars*
500	15	485	10	9.70	48.50
500	18	482	10	9.64	48.20
500	19½	480½	10	9.61	48.05
500	21	479	10	9.58	47.90
500	22	478	10	9.56	47.80
500	24	476	10	9.52	47.60
500	26½	473½	10	9.47	47.35
500	30	470	10	9.40	47.00

You will note from this statement that a 500-pound bale of cotton, sold at 10 cents net weight, would bring $48.50, while the same bale of cotton, with 21 pounds of bagging and ties, the usual amount now put on by farmers, when sold on a gross-weight basis, would bring only $47.90.

In other words, according to the information gathered by your Department of Agriculture from cotton mills and exporters, if they were buying cotton on a net-weight basis, they would figure their price in this instance at 10 cents per pound.

However, if they were buying on a gross-weight basis on the same day and the same market, their price would be figured so as to take care of the tare—bagging and ties—as stated by me over and over again, at 9.58 cents.

This statement clearly and definitely proves my contention, and not only do they figure this difference, but you will note that in selling that same bale of cotton there is 60 cents difference in favor of net weight.

Those who are interested in jute would immediately state: "Well, this 60 cents perhaps would not pay the difference between the cost of jute bagging and bagging manufactured cut of cotton."

This may be true, and this saving is not as important as the tremendous saving in waste, freight, insurance, and so forth, as clearly proved by the facts that I have given you in these remarks.

I am trying my best to get over to you perfectly good evidence bearing cut my statement that cotton producers do not receive any pay for their bagging and ties, in that, as stated, it is deducted when the price is made by the manufacturer of cotton.

Listen to Mr. J. M. Locke, a representative of the American Cotton Shippers' Association, who appeared before our committee:

Mr. FULMER. Then the mill in making their price to you, they take into consideration the tare, and therefore you do not have anything to do with that?

Mr. LOCKE. Mr. FULMER, my point was specifically directed to the point that the cotton merchant does make a profit on his tare, but it is a profit that is absolutely essential, since it is necessary to put a patch on the bale.

Answering the point that you bring up, I quite agree that in the final analysis, when the mill buys a bale of cotton they know that they are not going to consume the tare and they figure accordingly.

Mr. FULMER. And when the farmer gets a gross price, naturally he is getting a price less the amount figured off by the mill for the tare.

Mr. LOCKE. Yes, sir.

You will note that not only does Mr. Locke agree with my statement but he states emphatically that the buyers who patch on additional bagging do so for the purpose of making a profit.

I am sure that you will agree with me that none of this profit goes to the producers of cotton and that it is an extra burden on the cotton industry amounting to millions annually.

I am quoting also Mr. Jenkins, who is a cotton buyer residing at Norfolk, Va., and you will note from his statement that where a cotton mill buys locally from a farmer the price is higher than the mill would have paid had the mill purchased this cotton with additional bagging patched thereon.

This certainly, it would appear to me, should convince anyone that the belief that farmers are really paid for worthless baggings and ties is simply a joke. I think the following was a slip of the tongue, but should convince any "Doubting Thomas":

Mr. JENKINS. Yes; but we will ask you to consider a cotton mill of North Carolina, buying cotton in the field, pays more for their cotton, with no patching on it, than the man who buys cotton at a mill, where he knows he is going to get compressed-bale cotton with patching on it.

In this statement you will note mills take note in making their price for lint cotton the amount of bagging patched on. Surely, then, you would not contend that mills do not take into consideration bagging and ties as a whole in making their price for lint cotton.

JUTE PROPAGANDA

Some days ago, when we had the net-weight bill up for consideration, the Members of the House were flooded with telegrams from the manufacturers of jute and those who have alined themselves with the jute interests urging them to defeat my bill, H. R. 57.

The thing that is amazing to me is that Members of Congress will fall for this organized type of propaganda and vote against legislation which would mean millions to cotton producers, who are annually losing thousands of their farms, and which would tend to consume annually a considerable amount of our surplus cotton, as well as give to the producers of cotton their own markets for their own products.

Now that the bill has passed the House and gone to the Senate, listen to this article, which was taken from the Waste Trade Journal of June 17, 1939:

FULMER BILL NOW PENDING BEFORE SENATE BODY

The Fulmer bill, known as H. R. 57, which has been introduced by Representative FULMER, has been passed by the House of Representatives and is now before the Senate for vote.

This measure, if passed, will eliminate the use of jute covering for cotton bales.

Francis T. Blissert, secretary-treasurer, National Jute Burlap Bag Dealers' Association, Inc., urges that all members of the trade write their Senators immediately to have this bill killed.

This is the usual manner in which these associations, representing all of these well-organized, monopolistic groups, proceed to get what they want in Congress or to hold down the passage of any bill which would be in the interest of the great masses of the people if they have any reason whatsoever to believe that the bill would infringe upon their selfish interests.

This association is composed of jute-burlap bag dealers and not jute bagging dealers. However, when you mention the word "jute" the various associations representing the various jute interests in any line immediately get on their toes for the purpose of killing off any legislation affecting jute in any line. They do not want their selfish line broken in any way for the present. They fear that the importation of jute, amounting to around 2,000,000,000 pounds annually, might be cut out and cotton substituted for jute.

With over 11,000,000 bales of cotton stored with the Government under the loan program, costing $45,000,000 annually for storage and interest charges, I cannot understand how anyone should be willing to permit India, a large cotton-growing country, a country that is taking a considerable part of our export market, to flood this country with jute products, taking away from our cotton farmers their own perfectly good American markets to the extent of around 2,000,000 bales annually.

It is my firm belief that the only reason this is permitted under a definite tariff policy that was established over a hundred years ago is because it is a matter that definitely concerns the South.

It is also my firm belief that if the importation of jute affected the people of New England, where they have all of these years had the benefits under a tariff policy at the expense of the South, that they would not stand for it for a minute.

When we had the bill up the other day those opposing the passage of the legislation—in other words, representing the jute interests—offered an amendment proposing to strike from the bill the provision setting up the maximum tare allowance by the Secretary of Agriculture in establishing tare standards.

This, of course, would bring about net-weight selling, but it would not eliminate the using of this old, heavy, disgraceful jute bagging; therefore we would have to continue to pay these millions of dollars for losses in the way of extra freight, insurance, waste, and so forth.

Certainly, the jute interests would be perfectly willing to have this type of net-weight bill passed by the Congress for the reason that they know that they can offer this type of jute on a 21-pound basis, just what we have at this time, and the Secretary of Agriculture would have to accept same; and, as stated, we would continue to use the same type of bagging that we are using at this time.

In connection with this statement just made, some days ago I called upon the Department of Agriculture to ascertain whether or not with just simply net weight the Secretary would be forced to accept the standard requested by the jute interests, and was told that this would be the case.

While I am for preserving our own markets for our own people, and while I am for using cotton for cotton bagging, especially in that we have perfected this type of bagging to the extent that it would better serve the purpose of covering cotton than this old, wasteful jute bagging, the main thing that I am concerned about is the provision carried in my bill which is actually the heart of the bill, setting up a maximum weight in establishing a tare—bagging and ties—standard, which would absolutely bring about the saving of millions annually in freight, insurance, waste, and so forth, as clearly brought out in the various statements that I have been making on this most important subject.

I have been asked: "What is the Senate going to do about your bill?" My answer to this question is: "Only the Lord knows."

You will note from the report submitted with my bill to the House that we have the unqualified endorsement of the secretaries of agriculture of the Southeast, farm organizations, cotton manufacturers; in fact, everybody interested in cotton except the jute interests.

If these endorsements, and the statements made by me today, backing up same with definite proof that every statement made by me is true, do not have any weight with the members of the Senate Agricultural Committee or the Members of the Senate, if and when my bill is reported, then those of us who are actively interested in doing something constructive for farmers and something which would tend to reduce the large cotton surplus might just as well give up and tell these various monopolistic, selfish groups, who today absolutely have our country by the neck, to go ahead and continue to rob the people, all of which I am sure will be corrected some day by a concerted effort on the part of the people.

Brotherhood of Locomotive Firemen and Enginemen

EXTENSION OF REMARKS

OF

HON. MORRIS SHEPPARD

OF TEXAS

IN THE SENATE OF THE UNITED STATES

Tuesday, July 11 (legislative day of Monday, July 10), 1939

ADDRESS BY ROLLAND BRADLEY

Mr. SHEPPARD. Mr. President, I submit for publication in the RECORD an address delivered by Hon. Rolland Bradley before the tri-State meeting of the Brotherhood of Locomotive Firemen and Enginemen on June 9, 1939, at the Rice Hotel, Houston, Tex.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

It is a real pleasure to be with you this morning and respond to your invitation to address the convention. I am especially glad to be here because labor can do so much to further the cause of the people in America today. Labor's interest in this field is served, first, by our unions, and next by labor law based primarily on legislation.

The interests of the workers require these two safeguards today more than in earlier generations in America in part because of changing economic conditions. Formerly, during a depression, men could take their families to the frontier and settle on good land almost for the asking. Today we have reached the Pacific coast and the Rio Grande, and there is no longer a frontier or any public land that will support men by crops or known minerals. So the picture has changed and men must use these other means; that is, organization and legislation, in securing equality of opportunity.

It is suggested by the new president of the University of Texas that education must help solve this problem. We must educate for citizenship in our democracy. We must not train high-school boys to overcrowd the trades and so force wages down. Instead, let us see that these boys have equal opportunity to learn history, political science, economics, and the other things that will aid them in protecting and preserving American democracy.

For all Americans, including labor, the great cause of the common people implies rule by the majority and local self-government. It also includes our cherished southern doctrine of States' rights—a doctrine now endorsed by both Democrats and Republicans, but too often violated by either party when in power in Washington. Today especially that cause of popular government insists on the reign of law rather than of men or the rule of any one man or dictator.

I am glad that the president of the Canadian Trades and Labor Congress in Toronto, Canada, before the convention of the Brotherhood of Railway Clerks, recently said that trade-unionists in North America must join in the fight against dictatorship. We can do much to make this fight a success by causing our democratic institutions to meet the problems of our times. In adjusting our economic system here in America to current domestic and international problems, let us be very sure of our loyalty to the democratic principles. This requires an alertness and aggressive action, and I would illustrate this attitude by a local experience. The city of Houston has just recently determined to preserve the democratic principle in its city charter by refusing to adopt the so-called city manager plan. As chairman of the committee that led the successful fight against this plan, it is my hope that the citizens here will be diligent to preserve their direct control over the chief executive of our city in future administrations as at present. I am not criticizing any of the incumbents, but at some future time a city council may become described as the "floundering five," partly at least because of a weakness that still exists in our city charter. The charter was amended a few years ago, and this resulted in uncertainty as to responsibility of some officials of our city, so that at times difficulties have arisen in taking care of municipal business. If these weaknesses are corrected in the near future, we may avoid another campaign for the city-manager plan based on the erroneous claim that the people of Houston are not capable of self-government.

There is another thing that democracy must do to preserve itself. We must guard against dictatorship, despotism, or tyranny (and they all mean the same thing) by guarding well against a serious danger even under the rule of the majority. For the majority may be just as despotic and tyrannical as any one man. We must safeguard the rights of minorities "to know, to utter, and to argue * * *." The majority must rule, but the minority should be heard. (Cf. our former alien and sedition laws and present legislation, Journal of the House of Representatives, regular session of the 43d Legislature of the State of Texas, pp. 1828–29.) This may be done by making proportional representation a part of representative government. This reform may be the next great step that democratic government must take in the political field. It is not a new or half-baked theory, for proportional representation was advocated in the last century by no less a man than John Stuart Mill.

Turning now to the economic field, let me discuss for a few moments one of the great laws that recently has been enacted by the Congress in the interest of labor. The National Labor Relations Act is misunderstood by some and misrepresented by others because of the fact that it is a vehicle for improving the condition of labor. But our very organizations here represented are for that purpose, and these things are necessary in our world because of the fact that justice does not reign in the economic field. Generally laws are based on a conception of balancing static interests; but the National Labor Relations Act is charged with the responsibility of offering a means by which the underprivileged may improve their conditions. On this account it should be as it is—a pro-labor act. In this regard it differs from the static conception of justice and is dynamic and progressive. Furthermore, it is this constructive and progressive statesmanship that must assert itself in America in the interest of democracy and as the only means of securing justice for the underprivileged and disorganized ranks of labor in a lawful manner.

You will be interested to know that so far this field of labor law has developed without a serious mistake on the part of organized labor. One of the fundamental principles of the National Labor Relations Act is the right of the workers to organize themselves. This principle of law was announced in a decision by the United States district court here in Houston and upheld by the Supreme Court of the United States, when one of the railway companies was required to make way for the legitimate labor organizations of its employees (*Texas and New Orleans Railroad Company et al.* v. *Brotherhood of Railway & Steamship Clerks et al.*, 281 U. S. 548; 74 L. ed. 1034). The principle was carried forward under the National Recovery Administration in section 7 (a) of the National Industrial Recovery Act. But that statute did not provide for certain things that were later written into the present law. For instance, although it was proposed at one time that proportional representation be provided for employees so that different unions with varying affiliations, including the company union, would be allowed representation in collective bargaining, the American Federation of Labor properly condemned this policy as breaking the ranks of labor's organization in its struggle for social justice. We must recall that labor has a cause to serve, and that it cannot be handi-

capped by even certain principles that do have their proper place in a political democracy today. Let me restate parenthetically that politically democracy is ready for proportional representation as I explained earlier, but economically labor is not ready for that step. Let me add that in political science today we must make the same careful distinctions that a surgeon must make between tissues of the human body. Senator WAGNER wisely protected labor against this ill-advised proposal in the National Labor Relations Act. Furthermore, I do not believe that this safeguard will be tampered with if organized labor is alive to its interests.

We should also follow the Senator in his opposition to the proposed amendment that would authorize employers to influence employees concerning their union affiliations. It is now a part of our jurisprudence, and should be continued as such, that it is not legal for the employer to interfere here, just as it is not proper for him to concern himself with the religious affiliations of his employees. Oh, I realize that some misguided labor leaders feel that they can secure an advantage by letting the employer favor one union against another. But they should look ahead and see the danger of having company unions organized at the instigation of these same employers. Let us hope that whatever internal conflict labor may have will not be reflected in unwise legislation that later will be damaging to all of the labor movement and a curse to those who toil.

On the other hand, I believe that the American Federation of Labor is right in wanting to prevent the National Labor Relations Board from determining what units shall elect representatives for collective bargaining. This is giving too much power to the Board, for the provision permits the Board to favor trade unionism or industrial unionism. This is a vital question for labor in America at the present time, but it should be no concern of the public officials who administer this act. We must trust the employees to determine these questions in a democratic manner and must find an equitable basis for holding elections for the employees in the various industries.

In conclusion, let me touch on a broader field in which labor is vitally interested, for either directly or indirectly it affects the wage scale of those who do the world's work. I speak of that gravest domestic problem—unemployment, or reemployment. It was not provided for in the Constitution of the United States, for the founding fathers were not called upon to meet the issue. I believe that if the problem had been with them, as it is with us, they would have placed some provision in the Constitution granting limited powers to the Congress to aid unemployed individuals to secure openings in industry on some basis such as shorter hours with protection against wage cuts.

Heretofore, statesmanship has been too much engrossed with problems such as the tariff and other measures that constitute privilege to the business element of the community. The present generation is witnessing a change. Already in other countries attention is being turned to the more fundamental problem of the welfare of humanity generally. This is well illustrated by proposed treaties that have been promulgated under the International Labor Office of the League of Nations in Geneva. These treaties are worked out between representatives of employers, employees, and the governments concerned. They relate particularly to hours, wages, and working conditions of labor, and are of especial value to the western nations, including the United States, because they protect our standards of living against those of cheap Asiatic labor. One of the great difficulties in this program is that in the United States the treaties at present would be ratified by 48 States and the Federal Government. This is almost an impossible task. If we would amend the Constitution to authorize Congress to have the limited additional power to protect labor both in intrastate and interstate commerce in the matters of hours and wages, it should be possible for these treaties to be ratified by the proper agencies of the Federal Government for the whole Nation. This would promote higher standards of living and increase employment for labor over the world, and in this manner we would eliminate one of the causes of war.

The amendment is also needed to meet our domestic problems. The present Federal law is inadequate because it cannot protect labor in intrastate commerce and is unfair to interstate commerce so far as competition is concerned. Furthermore, in merely scratching the surface by affecting the employment of a few hundred thousand employees and possibly by increasing employment in this field in terms of not over five figures, how can we expect to meet the problem of reemployment of 13,000,000 American citizens? The answer is a proper Federal amendment. This would allow private industry to reabsorb the unemployed—it would in this manner protect our Nation against its most serious danger. It would preserve the Constitution (ibid., pp. 2157–2158). For the Federal Government will find some way of meeting this problem before it destroys the very Government itself. In other words, necessity knows no law. By granting the needed power to the Federal Government and by a strict construction of our Constitution, we would be preserving the fundamental law of the land, including the cherished principles of local self-government, States' rights, and the rule of law and not of men.

Let labor take an active part in meeting these problems. You have a serious responsibility to the labor movement not only as trade-unionists but also as citizens. In fulfilling that responsibility you may rest assured that you are only performing your duties as American citizens.

Neutrality and Foreign Policy

EXTENSION OF REMARKS

OF

HON. ROBERT R. REYNOLDS

OF NORTH CAROLINA

IN THE SENATE OF THE UNITED STATES

Tuesday, July 11 (legislative day of Monday, July 10), 1939

STATEMENT BY LOUIS B. WARD

Mr. REYNOLDS. Mr. President, I ask unanimous consent to insert in the RECORD an extremely interesting and informative historical statement relating to the problems of neutrality made by Hon. Louis B. Ward before the Committee on Foreign Relations of the United States Senate.

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

NEUTRALITY, PEACE LEGISLATION, AND OUR FOREIGN POLICY

Mr. Chairman, for the record my name is Louis B. Ward, my business is that of a business counselor, with offices at 708 Fisher Building, Detroit, Mich. I appear here representing myself alone.

Since 1910, or for 29 years, I am fairly familiar with the so-called efforts at international peace, starting with the Carnegie Foundation some 29 years ago and following through the War-to-End-Wars, the League of Nations, and the World Court.

May I say to the committee that over a quarter of a century ago I was studying international law in the schools and that 25 years ago I started teaching American history to the largest classes ever assembled in this country, which classes I taught for some 7 years. That I know a little about war, having served overseas in the World War. That I married an army nurse, not a Red Cross nurse. That I am a Democrat who cast my first vote for Wilson in 1912, my second vote in the Presidential campaign for Wilson in 1916, and my third vote in a Presidential campaign for even Harding, so thoroughly disillusioned was I at the imbecilic idealism, the arrogant hypocrisy, and the diabolical treachery that underlay the 14 points of the Wilsonian philosophy which protested peace and intended war.

By way of introduction I will say further that I am the author of the little pamphlet entitled "Name the Aggressor," which was distributed among those of the United States Senate who requested it and was published as a contribution to the deliberations of the United States Senate so that they would know in a short monograph the place aggression had held in world history, so that no one of the 96 would be deceived by a new name "The Aggressors."

I come before you to make five short points on the subject of your deliberations, namely, neutrality, peace legislation, and our foreign policy. To those members of the committee who have good will, who truly wish in their hearts to eradicate war, they will, of course, realize that first we must know the causes of modern war. I name these causes as five: (1) Exaggerated nationalism, (2) economic imperialism, (3) militarism, (4) the secret treaty, (5) propaganda.

PART I. EXAGGERATED NATIONALISM

The meanest student of the philosophy of history will realize that between the individual and humanity there lies the fundamental fact, the nation.

Long before the dawn of history, mythological characters determined a natural, national spirit in an Egypt, a Babylonia, a kingdom of Medes among the Persians, in Greece, and in Rome. A handful of names come down from the Hebrews, and yet from inspired genius of ancient days there was transmitted through the medium of the nation the priceless heritage of Leviticus, Deuteronomy, and the other books.

Only 50,000 freemen dwelt in Athens—the equivalent in a modern, municipal ward—and yet through the spirit of nationality there came down to us, with few names left, the priceless heritage of Grecian grandeur.

With perhaps a hundred thousand freemen in Rome, and a handful of names in recorded history, there comes down through the centuries the institutions that effected a civilized world, Ireland excepted and unconquered. The glory that was Greece and the grandeur that was Rome have been transmitted through the fact of nationality.

My point is that from the mythological heroes down to the statesmen of modern Europe, the vehicle of transmission has been the nation.

In more modern days, empires have been stopped cold in their historic tracks when they sought to violate the principle of nationality and transmit any good or permanent gift by way of empire. Take, for example, Britain, with her offspring the Thirteen American Colonies. The genius of these American colonies

would no more be transmitted by the vehicle of British imperialism than could any divine gift be transmitted by a diabolical medium of enslavement. The genius of colonial America, with its Sam Adams and Patrick Henry, its Washington and John Dickinson, its Gouverneur Morris and its Alexander Hamilton, its James Otis, its Gerry, its Randolph, would strangle for want of breath if it attempted to express itself in the imperialistic idiom. The very spirit of freedom of the newborn or embryonic Republic needed nationality for its expression.

The point I want to impress upon the committee is this, that nationality is a God-given gift.

The second point with which I want to impress the committee is that an exaggerated nationality is always a cause for war. Our freedom came in 1781. By 1848 we had expressed this exaggerated nationality, after a short 65 years of freedom.

President Polk issued his Doctrine of Manifest Destiny. The young Nation looked with longing eyes upon the rich lands of the southwest, and Polk wrote a diabolical doctrine when he pointed out the superiority of young America as against the inferiority of a peaceful people that lived to the southwest of the Republic. Virtually, he taught the Nation that eventually we would grow and would absorb these inferior beings of Spanish blood—and if so eventually, why not now?

So we had our first war here in America, which grew out of the spirit of exaggerated nationality. It was the third war that we had fought. I need but call this principle to the attention of this distinguished Committee on Foreign Relations and ask you to develop it in your own minds, with your own applications, out of your deep and widespread knowledge of world history.

I want you to take the principle abroad and apply it to the Russia in the days of Peter the Great, when he wanted a window to the sea; through the days of pan-Slavism, pan-Germanism, Italia Iredenta, the Polish corridor, the lost colonies of La Belle France, and so on through the nations and the years till you see through modern history the frightful force of exaggerated nationality as a cause for war.

PART II. ECONOMIC IMPERIALISM

I step hastily to the second great cause for war, which I happen to term "economic imperialism."

It must be understood that since the industrial revolution in England there was a well-recognized school of thought, represented as the Manchester school, with such names as Hobbs, Ricardo, Spencer, and the apostles of free competition, preaching the doctrine that life in all its phases was strongly competitive; that victory went to the strongest and failure to the weakest. It was a harsh, cruel, and depressing doctrine, from Ricardo with his iron law of wages, to Malthus in his control of population. Its day was short, for free competition no longer exists in modern nations. Its place has been taken by the philosophy of economic domination.

The great masses of humanity are divided by a deep and wide chasm. On the one side of this chasm are the real producers of wealth—the underpaid farmer producing the food and fiber for all, and the underpaid laborer processing the food, the fiber, the homes, and all the material things of a civilization.

On the other side of a deep and wide chasm are a little group of wealthy men, and every capitalistic system under the sun is perfectly satisfied with things as they are within the state, and yet not satisfied that their economic domination of the state is enough. This little group strives perpetually for the control of the state itself, and the state itself, forgetting its majesty, yields to the control of the few.

Let me be specific and not pussyfoot. Here before this committee, I think it was November 1929, Mr. J. P. Morgan gave one of his rare public statements to the press. As I recall the statement, and without referring to it, it read somewhat as follows: "I have taken a position in the utility field, from Maine to Georgia."

In 1934 the St. Lawrence treaty was before the Senate of the United States. We have seen the Muscle Shoals development, the Boulder Dam, and the Grand Coulee. And I remember the words of J. P. Morgan, "I have taken a position, from Maine to Georgia, in the utility field."

The treaty needed a two-thirds vote. There were at least 28 votes at stake in the empire of the Morgans on the St. Lawrence treaty. At least 26 of those 28 votes were cast in solid block against the same principles of power development that were applied in favor of the people in the other great sections of this Nation.

That is a specific example of free competition giving way to economic domination where the majesty of the state is degraded and the state that should reign supreme becomes a partnership of special privilege. It is a small step from the economic domination of the majesty of the state to the use of the state in economic aggrandizement of the world. Thus the state comes in conflict with other powers and we have the most frequent cause for modern war. This I define as economic imperialism, and I borrow unabashed this philosophy from the late Pius XI, who preached it to the world from 1931 on in the encyclical "Quad Regesimo Anno."

I instance in our own country, therefore, the greatest recognized financial power asserting an economic hegemony over certain States, and I instance the vote of those States on the power question as contrasted to the vote on the power question in the other three-quarters of the Nation.

Abroad we remember 1907, when national economic dictatorship programmed the Berlin to Baghdad railroad, opposed by both France and England, boycotted financially in the exchanges of the world, and recognized as that irritating as to be regarded by many as an event leading to war.

I instance on the part of the British Empire the parallel case of the Cape to Cairo railroad, opposed by German and French influences.

I instance, above all, the Morocco affair, involving Spain, France, Germany, and England, and carrying in its wake the occasions for those secret treaties that bound on the one hand the Triple Alliance and on the other the Triple Entente.

PART III. MILITARISM

The third great cause for war I define as militarism, and, of course, include in the generic term all exaggerated preparations for hypothetical wars.

There is no member of this committee who does not recall the days when the press of America protested militarism and navalism throughout Europe. Between the years 1904 and 1908 the British Navy had been reorganized and strengthened by Sir John Fisher, while the German Navy was just beginning to grow in power.

England acknowledgedly was supreme on the seas and her approach to Germany on naval limitations was recognized as the same old appeal to status quo that the superior always urges against the inferior.

The Second Hague Conference was called for 1907. The navy laws of Germany in 1898 and 1900 laid the foundations for a strong German navy. Germany, of course, argued that her fleet should be comparable to her growing commerce and her growing colonial interests. She also argued that she must be strong enough to protect against a blockade from food and raw materials in case of war. Behind these arguments she wanted a German navy to back her diplomatic arguments in her struggle for colonial and commercial advantages under the economic imperialism principles I have just presented.

In 1904 had come the great change. England had introduced the dreadnaught. This obsoleted all foreign types of naval armament. Germany commenced to build the dreadnaught. English superiority on the high seas was threatened, for great numbers of lessor things may not equal a few greater things.

England authorized the laying down by 1908 of 12 dreadnaughts, Germany of 9. This was the ratio of 4 to 3. Of the obsoleted types, England had 63 to Germany's 26. Roughly this is the ratio of 7 to 3.

While America was criticizing the militarism of Europe England was stepping into the next phase of militarism, the recognition of staff superiority to civilian inferiority. This is one of the most dangerous psychological moments in the history of nations.

If there is anything in our reputed historic institutions, the superiority of the civil over the military is a recurrent fact in both British and American constitutional history. We recognize that principle when we put a President, under our Constitution, commander in chief of our Army and Navy.

We remember when the great Theodore Roosevelt was criticized up and down this land for wearing a pair of khaki pants when he visited the military camp at Pine Plains, N. Y.

The change is coming in America today as it came in Britain and Germany between 1904 and 1908, when under the pretense and guise of defense—national defense, the umbrella of militarism—Members of both Houses of Congress are listening in awed respect to what General Necessity or Major Cement are demanding in armament bills. We are aping the militarism of 30 years ago.

Militarism enters its third phase when the tacticians of one nation decide upon a potential enemy and work out a system of defense or attack in conjunction with a hypothetically friendly power. It is this joint collaboration that breeds the pooling of intelligence services, the trading of military secrets, and the resultant basis for propaganda—all leading, not to secret alliances, for they are within other provinces, but to what Sir Edward Grey once called "conversations," needing no expressions in treaty, yet so deeply involving a nation that in the event of war so-called "honor," God save the mark, leads nations into conflict they never dreamed of.

Currency Management

EXTENSION OF REMARKS

OF

HON. ELMER THOMAS

OF OKLAHOMA

IN THE SENATE OF THE UNITED STATES

Tuesday, July 11 (legislative day of Monday, July 10), 1939

ARTICLE BY WILLIAM TRUFANT FOSTER

Mr. THOMAS of Oklahoma. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an article entitled "A Competently Managed Currency Is the Answer," written by William Trufant Foster, director of the

Pollak Foundation for Economic Research, and published in the Rotarian for July 1939.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

[From the Rotarian for July 1939]

A COMPETENTLY MANAGED CURRENCY IS THE ANSWER

(By William Trufant Foster, director, Pollak Foundation for Economic Research)

What we need, and have never had, is money which meets two major requirements. The first has to do with value; the second has to do with volume.

The first requirement is stability of purchasing power. Our greatest monetary need is money whose value will stay put.

Whether prices are high or low matters little. With prices twice as high, consumers can buy just as much as ever, provided wages and other income are twice as high. And business can proceed just as well on one price level as on another, once prices have become stabilized on that level, just as a ship can sail as serenely and swiftly on Lake Superior as on the lower level of Lake Huron, once the ship has passed through the locks. It is the process of changing levels and the frequency of the change that retard progress.

In short, the first requirement of the dollar is that it shall be a true standard of value.

Unfortunately, the gold basis of money never has made it and never can make it a standard of value. However hospitable we may feel toward the United States dollar, however glad we may be to let it work for us, we must admit that it always has had one failing. It is not "the same yesterday, today, and forever." At least it is not the same in purchasing power; and that, after all, is the only trait of money about which we care a continental. It is disappointing, to say the least, to lay away a dollar in the pink of condition only to find, when we take it out, that it has lost half its ability to carry home a basket of groceries.

As as matter of fact, the gold basis of money in the United States has never made it a standard of value. In 1896 the gold dollar would buy twice as much as the gold dollar would buy in 1913; but in 1920 the gold dollar would buy less than half as much as it would buy in 1913. At one time carpets came nearer than gold to being a standard for measuring purchasing power, in the sense in which the yardstick is a standard for measuring carpets—that is to say, the exchange value of carpets, in terms of boots, barrels, bread, and commodities in general, varied much less than the exchange value of gold.

Money on a gold basis is a standard of purchasing power for only one commodity—namely, gold. That is an advantage to dentists; they always know precisely how much gold a dollar will buy. But, unfortunately for the rest of us, it is almost always something else that we want to buy.

Why, in any event, should we expect gold to prevent fluctuations in the value of the dollar? In many periods the production of gold has not kept pace with the growing needs of business. At no time does the annual production of gold bear any known relation to the changing monetary needs of the world. The yearly output has always been subject to accidental discoveries and to various other unpredictable influences.

In short, gold has failed to insure a stable monetary unit in the past; and in the future its failure may be even greater.

Sir Henri Deterding was right in asserting that at one time the demand for gold was artificially increased. As a matter of fact, the mere adoption of gold as a monetary base artificially increases its value. The whole system is entirely artificial.

All that applies with even greater force, and for the same reasons, to the use of silver. The stores of silver which have been kept by the United States Government so expensively and so solemnly for generations have no more to do with the purchasing power of a silver certificate than the monkeys in the Washington Zoo. The amount of silver which the Government buys, supposedly for monetary purposes, is determined by the pressure exerted by representatives of silver-producing States.

Speaking of gold, how absurd seems to us the custom among certain savages of wearing gold rings in their noses. Why doesn't it seem absurd to the savages? Partly, perhaps, because they don't know they are savages. But more certainly because they are used to the custom. That is the only reason why the people of the United States cannot see the absurdity of paying dearly for most of the monetary gold supplies of the world by arbitrarily fixing a high price for gold and then burying the gold in costly vaults and there keeping it, at great expense, for no purpose whatever. As we have seen, these huge stores of metal, theoretically worth so many billions of dollars, would not keep our paper money stable in value even if the paper were redeemable in gold on demand. As it is, what the world is now doing with its treasures of gold is merely a comedy of errors. The monetary gold in the United States would serve the country's monetary needs just as well if half of it were used to put rings in the noses of all the wild men and women of Africa.

Sir Henri Deterding seems to be in error when he says that the standard of money has to be a material. Since the United States abolished the gold standard and substituted no other material standard, the value of the dollar has been more stable than in several former periods when the gold standard was in use.

To meet the second requirement of money, the volume must be such that consumers buy the available output of commodities and services at individual prices which leave the general price level about where it is. The needed volume is not guaranteed by the gold basis. This is proved by the official statistics of every country which has ever relied on the gold standard. In the United States, when all its money was on a gold basis, billions of dollars were added to the circulation when more money was harmful, and billions were lost from circulation when more money was sorely needed.

How could we expect anything else in the future, if our currency were on a gold basis, or a silver basis, or a basis of gold combined with silver? Or, for that matter, on any other kind of commodity basis? The supply of circulating purchasing power in the United States is determined now chiefly by the action of individual banks in creating bank credit, since, as everybody knows, over 90 percent of the circulating purchasing power of the United States is in the form of checks on bank deposits and not in the form of coins or printed money.

Under this system the volume of purchasing power expands quickly, to a large extent automatically, and sometimes riotously and dangerously, when there is general optimism about the future of business; and the volume contracts just as quickly and automatically and just as dangerously whenever the bankers and borrowers are pessimistic. In short, the supply of money, with or without the metal basis, is left subject to the action of individual bankers, who could not, even if they would, carry out a collective policy aimed to enable the flow of money to keep pace with the flow of commodities and services.

"Why do we have hard times?" wrote a lady reader to the editor of the Brunswick Pilot.

"Lady," answered the editor, "hard times is a period when people quit feeding the cow and wonder why she gives less milk."

There are learned treatises on business depressions which say less than that. It sometimes seems as though scholars, by close and persistent study, finally contrive to see everything except what is perfectly plain. Nothing seems plainer to the plain people than the fact that they cannot keep on feeding dollars to business unless they have the dollars. And without the dollars business cannot keep on producing wealth. The dollars will flow into the right channels fast enough, and not too fast, only when competent authorities manage the currency solely for that purpose.

Why all this fear of a managed currency? Every currency is a managed currency. It does not just happen. The only question is whether currencies shall be managed intelligently, or as we have managed them throughout the world for many generations. But isn't it possible under a managed currency to have disastrous inflation? Certainly it is possible, just as it always has been possible, when nations have relied on gold or on silver. The choice before each nation is between a system which certainly has gone wrong, over and over again, and one which possibly might go wrong.

In the United States the present waste of men, money, machines, and materials is such that we can no longer rely on the gold standard or the silver standard without risking all that our form of government holds dear. We should create, by collective action, enough currency and credit to enable consumers to spend enough to enable producers to operate machines and employ workers. We should not weakly delay action because there is a possibility that if we created enough money for the purpose, we might create too much. The cows of commerce are now suffering from monetary malnutrition.

The Church and American Democracy

EXTENSION OF REMARKS

OF

HON. JAMES J. DAVIS

OF PENNSYLVANIA

IN THE SENATE OF THE UNITED STATES

Tuesday, July 11 (legislative day of Monday, July 10), 1939

ADDRESS BY DR. OSCAR F. BLACKWELDER

Mr. DAVIS. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an admirable address delivered Sunday afternoon, July 2, 1939, over the blue network of the National Broadcasting Co., by Dr. Oscar F. Blackwelder, pastor of the Lutheran Church of the Reformation, Washington, D. C., under the auspices of the Federal Council of the Churches of Christ in America.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

Tuesday of this week we celebrate the one hundred and sixty-third anniversary of the Declaration of Independence. In the spirit of that day and of that document I come to speak with you this afternoon on the Contribution of the Church to the Problems of American Democracy. By the word "church" I refer to organized Christianity of all types. By the term "democracy" I mean our constitutional form of representative government.

There are four conceptions of the relation of church and state. First, that the church is above the state, as in ecclesiastically dominated countries. Second, that the church is alongside the state, as in state-church countries. Third, that the state is above the church, as in totalitarian countries. Fourth, that the church is separate from the state, as in our country—a free church in a free state. Both being free institutions, they may make free contributions to each other.

Listen to a moment of history. The logic of Aristotle and the moral power of Christianity were much more influential in the minds of those who wrote the Declaration of Independence than French political theory of that day. Without a like moral, religious, and altruistic outlook among the leaders of our generation, the principles which were laid down 163 years ago and which have guided us from liberty to liberty can neither be grasped nor upheld. With ethical and moral training increasingly subtracted from college and university, the role of the church has expanded tremendously in the future of democracy. There are at least four contributions which the church should make and which many among us believe the church alone can make.

First, the church must be the spear point in the struggle for human freedom. We hear much today and we probably will hear more tomorrow, about freedom of speech, freedom of press, and freedom of worship. These three mutually defend each other, but freedom of speech and of press are safeguarded ultimately by freedom of worship. When freedom of worship goes, the final bulwark of social liberty has departed—that spirit which inspires a bill of rights.

Cardinal Newman is quoted to have said, "Not a man in Europe now who talks bravely against the church but owes it to the church that he can talk at all." Elbert Hubbard hardly can be accused of religious favoritism, but in writing about Martin Luther and his contribution to modern civilization, he uses these words: "He fought freedom's fight with all the weapons God had given him; and for the liberty we now enjoy, in great degree, we are debtors to Martin Luther." Hear the words of Prof. Albert Einstein, "Being a lover of freedom, when the revolution came in Germany I looked to the universities to defend it, knowing that they had always boasted of their devotion to the cause of truth; but no; the universities immediately were silenced. Then I looked to the great editors of the newspapers, whose flaming editorials in days gone by had proclaimed their love of freedom; but they, like the universities, were silenced in a few short weeks. Then I looked to the individual writers, who as literary guides of Germany, had written much and often concerning the place of freedom in modern life; but they, too, were mute. Only the church stood squarely across the path of Hitler's campaign for suppressing truth. I never had any special interest in the church before, but now I feel a great affection and admiration, because the church alone has had the courage and persistence to stand for intellectual truth and moral freedom."

How is the church to be the spear point in the struggle for freedom in our country? Let us see. The Declaration of Independence asserts that all men are created equal. That obviously cannot mean physical nor intellectual equality. I suppose it means equality before the law. But is that fundamental?

The only essential equality, of which an oath in court may be a symbol, is equality before God. In a Washington, D. C., church, among the members received one Sunday morning were a Chinese laundryman and Charles Evans Hughes, who was then Secretary of State. In welcoming them the pastor said, "The ground is level at the foot of the cross." The church has called this basic democracy the universal priesthood of believers. Because men are equal before the Supreme Judge of the universe, they have the right to equality before the laws, courts, and judges of men; they also have the right to education, so they may move toward equality of opportunity; they have the right to freedom of conscience and speech, because they are sons of God.

The essence of personal freedom is not the right to do what you please; that may be slavery. Personal freedom is the power to do what you ought. Social freedom is the environment and atmosphere to make this personal freedom more largely possible. Social freedom, therefore, means equality of opportunity.

When the conviction of equality before God departs from the popular mind or that conviction grows dim, the basis of equality before the law and the reason for equality of opportunity are gone. It is the church's business to keep this conviction steadily to the forefront today.

How is the church to be the spear point in the struggle for human freedom? By using freedom of worship to call men to enter this democratic priesthood of belivers. By laying the mind of Christ radiantly alongside this distorted earth until men, tortured by the difference, rise up to build the kingdom. By bringing problems that crush human life under the searching light of Jesus and at the same time keeping the splendor of the Eternal God in the souls of men no matter how long our social hopes are frustrated or delayed.

But observe now, as a second consideration, that the church only can be the spear point of freedom as it interprets the mind of Christ and there can be no freedom without justice. So the second contribution of the church to American democracy is to keep the mind of Christ infused in the minds of men so that their sense of justice may be sharp and dependable.

The practical expression of justice for the average man is known as the Golden Rule, "Do unto others as you would have them do unto you." Few influences have troubled men morally more than that statement. Yes; Jesus taught it—but to His disciples who knew Him and thus had the way opened and the power provided by which to live on the higher levels of life, not the lower or the average. You see, this Golden Rule can be applied on all levels in life—even by dope fiends and gangsters.

This rule can be most selfishly followed. Why do persons of comfortable circumstance so frequently become cold and indifferent to others? I think the answer is simple. They don't want much back from men, and so they give little of themselves to men.

This rule puts a man and his own wishes at the center of all his thinking: "Do unto others as you would have them do unto you." So a man himself becomes the measurement and the yardstick of all he wants and gives.

Principles are higher than rules, so I propose to you the Diamond Principle. No dope fiend can practice that. It takes a man out of the center of his thinking and provides a higher measurement than his own so easily influenced conception of what is right and wrong. This Diamond Principle reads: "Do unto others as Jesus would have you do unto them." There's a measurement that lifts a man out of himself into ageless principles.

An American newspaper recently commented editorially that the only appeal beyond the United States Supreme Court is the appeal to the future, where new conditions bring new duties. But there is an appeal beyond that, namely, to the past, present, and future. That is the ultimate. That is God.

A man who is only just will soon be less than just. A man who is only square will soon be less than square. Justice does not have the power to keep its own tools sharpened. Who shall say what justice is? Who really knows? Love and God are emphatically necessary in one's consciousness in order to keep alive the desire for justice and to keep one's mind alert to what justice is. Love and God meet in Jesus and climax in His cross. There is, therefore, one basic social need in the world—justice through Jesus.

For only Christ can set men free
And give them vision new;
Grant us our fairest dream to see,
O land where dreams come true.

If the church is thus the prophet of freedom and the promoter of justice, it follows that the church, when true to her mission, holds the key to the functioning of a democratic society. So her third contribution to America is to offer the cement to hold society together and make possible government by the people.

I use just here an illustration I proposed last summer in this service for which I am indebted to a discriminating friend. He suggests a little word of five letters by which to describe the present world situation. That word is "s-p-l-i-t." The world is split vertically into nations; nations are split horizontally into races; races are split obliquely into classes; within classes homes are split as the increasing divorce rate indicates; within homes are what the psychologists call split personalities. In other words, we have been leaving out a kind of cement necessary to hold life together.

So every conceivable device is being used around the world to hold nations together within themselves. Maintaining national unity in most nations today is a difficult procedure. Possibly this largely accounts for the use of propaganda.

No government can succeed long without social unity and the task is how to achieve it. Can it come by the use of physical force? Or by putting an increasing number on the public treasuries? Or by inciting one nation's feeling against another? Or arousing fears against all others in order to awaken loyalty to home government?

Many among us believe that whatever governmental measures are imperative, the cement also necessary to hold society constructively together and make government possible is religion. The word religion, which has often been made a cause for human division, really means a bond or tieback, uniting a man to God, to his fellow men everywhere, and becoming his inward tie, his integrating principle, sustaining his own life to prevent a split personality. Such religion is more than a principle, a thesis, a set of rules, abstract righteousness, or social tradition. Religion at its best centers in a person—Jesus Christ, who, with His uniting and transforming spirit of brotherhood, is able to hold men together of varied backgrounds and make possible the very existence of society. Christ is the undergirding reality which makes the world real.

George Washington saw this as he confessed to the Constitutional Convention: "There can be no government without morality; there can be no morality without religion; there can be no religion without God." But George Washington saw more than that, for he was a vestryman of a Christian church. I believe he felt what we feel—that the problem is how to make God real, vivid, vital, or, if I may dare use the word, how to make God practical. There's where Jesus comes in. He is as practical as it is possible for God to be. So He is God's word to man in every area of man's life.

I wish I had the power both of thought and of expression to make you see and feel deeply this afternoon what Jesus and the kingdom of God could do for our broken and harassed world. Here is the greatest social conception that ever entered human history, by which the nations of the world may conserve their best traditions and cultures but find a way and a spirit to transcend all that now divides and alienates them. Here is the loyalty strong enough, intelligent enough, moral enough, great enough to overcome racial bitterness, national narrowness, and economic jealousies. Here is society's cement.

And now, as I close for today, I suggest that the church's fourth contribution is to produce men and women of dependable character, capable of self-government, able to think not only technically but morally on public questions. Freedom does not rest upon law but upon men, for men make, obey, or break laws. Justice is not the foundation of society—men who do justly are that foundation. Men of great genius may be admired; men of great wealth may be envied; men of great power may be feared; only men of great character are trusted—for upon them democracy rests. Government of the people, by the people, and for the people will perish from the earth unless the average man has a larger degree of moral dependability. The church's greatest contribution to democracy is to produce men and women of character.

What are some of the moral and spiritual principles which enter the making of dependable men?

Democracy rests upon cooperation and mutual confidence, which, in turn, rest upon the decrease of human selfishness. A recent President of the United States is supposed to have used these words, "When a majority of the people move selfishly in the same direction at the same time, democracy is doomed." Many within hearing of my voice this afternoon may be amazed to know that they are living, probably unconsciously, on the doctrine of economic determinism, taught by Karl Marx. I ask you, do you have any social interests beyond your own income and comfort and giving a bit of charity? Do you belong to any civic association, any educational association, any church? A man who is only stirred when his own income and comfort are at stake is building his life on the principle of economic determinism no matter what his political label may be. Such persons take out of society more than they put in and are making it very difficult for democracy to work. The cross of Christ in a man's life is the only real method to reduce selfishness in his life. Unchanged people can wreck the values of the finest social system in the world.

A leader of a point of view against the one I am now pleading for has said, "As for us we were never concerned with priestly and vegetarian prattle about the sacredness of human life." And I answer, it is impossible to build character except upon the conviction of the sacredness of human life. If man is made in the image of God, for the purpose of achieving sonship with God, then man is a spiritual personality—not cannon fodder for dictators; not a tool of some type of collectivism; not an adjective to modify something else; not a unit in a totalitarian state. Any depreciation of human life is a false theory, and structures built upon it must fail. Another political leader has used these words: "Great problems in the lives of nations are solved only by force." That suggests military revolution, tremendous armaments, international brutality. The Christian principle in this issue seems to be: Forces which undervalue the meaning of life are doomed; nothing physical is final; brute force has within itself the seeds of its own destruction.

Speak, History! Who are Life's victors?
Unroll thy long annals and say.
Are they those whom the world called the victors
Who won the success of a day?
The martyrs or Nero?
The Spartans who fell at Thermopylae's tryst
Or the Persians and Xerxes?
His judges or Socrates?
Pilate or Christ?

Labor Conditions in the Philippines

EXTENSION OF REMARKS

OF

HON. ERNEST W. GIBSON

OF VERMONT

IN THE SENATE OF THE UNITED STATES

Tuesday, July 11 (legislative day of Monday, July 10), 1939

ARTICLE BY H. FORD WILKINS

Mr. GIBSON. Mr. President, I ask unanimous consent to have printed in the RECORD an illuminating article by H. Ford Wilkins, of the Manila Bulletin, showing some of the difficulties being encountered by the Commonwealth government of the Philippines.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

[From the New York Times of July 9, 1939]

PHILIPPINE LABOR SIGNS PEACE PACT—QUEZON TRIES TO UNITE MANY FACTIONS IN UNITY POLICY UNDER GOVERNMENT RULE—UNREST HAS BEEN GROWING—"SOCIAL JUSTICE" PLAN PROVED NOT UNMIXED BLESSING—TENANCY IS SORE SPOT

(By H. Ford Wilkins)

MANILA, June 30.—President Manuel L. Quezon is making a brave stab at securing actual government control of recalcitrant Philippine labor. He has accomplished it outwardly already by an amazing sort of political decree, combining dissident factions in a "unity of labor" under government auspices through the department of labor.

Labor's reaction to the idea is beset with lingering doubts about a government-guided and politically salted combination of labor unions and radical societies. In a try-anything-once spirit representative leaders of about 30 factions representing various sections of the country and shades of opinion actually signed a pact on June 5, expressing allegiance to the flag and government and promising to get along together under the guidance of a labor commission composed of government officials and labor and business representatives. The commission was appointed, not elected.

The signing of the pact was accompanied by a big labor demonstration in Manila. It was a government party. Between 80,000 and 100,000 marched in a parade.

QUEZON MAKES ADDRESS

There were speeches and ceremonies designed to fill up a government-decreed half holiday. Mr. Quezon himself gave the main address, informing labor that he, meaning the government, placed the rights of labor above those of capital because "the rights of labor are human rights while the rights of capital are property rights." He went on:

"Labor is more important than capital. Labor is the original producer of wealth, whether individual or national. Without labor wealth cannot be produced, and the already accumulated wealth will be consumed and disappear. Without capital labor can't produce wealth and in time accumulate it.

"Property rights, however, must be maintained and recognized not only for the benefit of the already property-owning class but in the interest of the workingman himself, who would be deprived of the fruit of his own labor beyond that which he needs for his own immediate essential daily requirements if the rights of property should be abolished."

The labor leaders liked that line of thought, and so did the workers. None expressed doubt about the President's sincerity, but they did wonder whether the government would be able to hold together labor factions that have been unable to reconcile their differences for 10 years. Within the week there were rumblings of discontent among former warring factions but no real split-offs.

The President's trump card was his firm control of one of the tightest political machines under any democratic system in the world.

RESTLESSNESS INCREASED

Philippine labor has been increasingly restless since long before the advent of the Commonwealth. The causes of it spring from the same root as causes of labor unrest the world over, the United States included.

Some of it is caused by deliberate labor agitation from imported or local leaders ranging from communistic and subversive to humanitarian in scope. Some is caused by economic and social conditions producing an underprivileged section of humanity which is learning to shout for its rights.

The results of it have included a growing national unrest which has occupied a large portion of the Quezon administration's time and thought. There were 125 strikes in 1938 reported to the Labor Department in industrial, manufacturing, transportation, and general labor fields, while in the agrarian sections of the country, especially among Filipino sharecroppers in the sugar-growing and rice-growing sections of Luzon and the central islands, violence broke out in a dozen spots, requiring constabulary emergency measures.

Borrowing from measures practiced both in the United States and in Mexico, Mr. Quezon embarked his administration upon a program of social justice, which really was a policy of appeasement of labor dictated by necessity. In its broader implications it is a battle against a deeply rooted system of agricultural feudalism. Mr. Quezon's critics see in it also a not unwise political move, for favor among the masses brings votes.

GOOD PARTLY COUNTERACTED

In its actual working out the social-justice policy opened up a Pandora's box of evils that partly counteracted the actual good it was intended to accomplish. Mr. Quezon attempted to set up a minimum wage of a peso (50 cents) a day and found there were many industries and circumstances of employment that simply could not, or in some cases would not, bear the traffic.

Getting an inch, some sections of labor attempted to take the usual ell, and a wave of strikes and violence ensued that made necessary a $250,000 special appropriation for more constabulary forces in trouble spots. The trouble centered chiefly in the ranks of agrarian labor, especially on the so-called friar estates, which are huge land grants dating from Spanish times and still owned by the Catholic Church.

Tenants numbering from several score to several hundred farm these estates and live on them, donating half the harvested crop to the landlord or lessee. Burdened by long-standing indebtedness to their "cacique" bosses, they have reached the point of rebellion in some sections of the country, resorting to sabotage of cane fields and mills, harvesting against court orders, refusing to deliver the landlord's share of the crop or actual mass theft from warehouses and fields. When armed conflict results the constabulary steps in.

Mr. Quezon recently attempted a legal remedy for this situation in the form of a so-called tenancy law which passed the assembly and became a law with the president's signature in the presence of a large delegation of planters who had come to protest. They had found that the law prohibited them from discharging a tenant for any cause without the express permission of the government through a department of labor representative, or, if contested, through a special industrial court. This meant red tape and weeks of delay, they pointed out.

In answer to their protest, Mr. Quezon pointed to the broader aspects of the national problem involved. He wanted to do away with the tenant system entirely, he said, and have farm workers paid daily wages. This step was taken in the direction of securing legal rights for underprivileged farm labor.

Then he signed the bill with a flourish. Incidentally, he said it was his intention later to apply the same principle of government control of hiring and firing in all industry and business, both native and foreign.

Meanwhile, the various factions of labor, from the conservative National Federation of Labor and the Congreso Obrero de Filipinas and its affiliates to the liberal Confederated Workers Alliance and leftist, Collective Labor Movement, are closely watching developments on the government-unified labor front with at least outward signs of getting along peaceably under government auspices and control—probably the only attempt of its kind ever made in a democracy.

The World of Tomorrow

EXTENSION OF REMARKS

OF

HON. ERNEST W. GIBSON

OF VERMONT

IN THE SENATE OF THE UNITED STATES

Tuesday, July 11 (legislative day of Monday, July 10), 1939

ADDRESS BY GOV. GEORGE D. AIKEN ON VERMONT DAY AT THE NEW YORK WORLD'S FAIR, JULY 2, 1939

Mr. GIBSON. Mr. President, I ask unanimous consent to have printed in the RECORD an address made by Gov. George D. Aiken, of Vermont, on Vermont Day at the New York World's Fair, July 2, 1939.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

It is pleasing to Vermont that we are able to take a small part in this great exposition depicting the world of tomorrow. Perhaps the part we take here is small even in proportion to our resources and to the importance of our State, but I make no apologies for that. What we are doing is well within our means and our ability to support.

In the world of tomorrow is involved the happiness, prosperity, and the security of our people—just as in the world of today. The degree to which these objectives are attained will depend upon the foundation of that future world, which is the present. When we build a highway or a building we must look well to the foundation on which we build, and so each era in history is in itself the foundation on which the successive eras to come must rest and depend.

Our forefathers founded well with their brawn and courage and self-reliance. They carved the foundations of a mighty nation from the wilderness of this continent. By their sacrifices, typified by Valley Forge, they have perpetuated that nation for 163 years and created a spirit that will endure.

We today are building the foundation upon which the world of tomorrow must stand. In Vermont we are keenly conscious of the necessity for building that foundation right.

That is why we have persisted, in the midst of a nation of unparalleled public spending, in doing without those things we could not pay for. We don't believe in building the world of tomorrow on a foundation of debt.

Also we have steadfastly refused to delegate the authority and responsibility for our personal and local affairs to an all-powerful central government. We don't believe in building the world of tomorrow on a foundation of dependency or subservience.

We believe in the self-reliance and self-respect of the individual, in the duty and privilege of each to work to be self-supporting, to own his own home and to endure hardship if necessary to preserve these rights. We do not believe that time will ever dim the desire of our people for these things.

The part Vermont is taking in this exposition is small, but we are keeping within our means. It is our belief that by general application of this principle that the world of tomorrow will find its foundation securely laid and ready to receive the weight of our future progress.

The Plight of American Agriculture

EXTENSION OF REMARKS

OF

HON. LYNN J. FRAZIER

OF NORTH DAKOTA

IN THE SENATE OF THE UNITED STATES

Tuesday, July 11 (legislative day of Monday, July 10), 1939

RADIO ADDRESS BY MORRIS ERICKSON

Mr. FRAZIER. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an address delivered by Morris Erickson, of North Dakota, a director of the National Farmers Union, over the National Broadcasting Co.'s system, on June 24, 1939. He spoke on the agricultural situation.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

For many years the plight of American agriculture has been discussed from every conceivable angle and by practically every person who could secure an audience. Conditions in rural America have been pictured in colors almost as dark as the gloom which actually exists. Remedies have been suggested varying from the dangerously ridiculous to the eminently practical.

In the perpetual forum on agricultural problems, three types of speakers participate. They include the thoughtful individual who expresses a philosophical interest in the subject, ever prepared to accord consideration to the views of others, and advocating no immutable formula; the irresponsible orator representing no one but himself or a handful of hypnotized followers, vociferous in his self praise, and vicious in his intolerance of the views of others; and the responsible leaders of nationally recognized farm organizations, democratically elected and answerable to their constituents for definite action of democratically devised programs.

Those who fall in the first category deserve our respect and our audience. Those who fall in the second category, having demonstrated their inability to work through democratically organized farmers among whom no individual's views are considered all-wise, speak only for themselves and their intolerant following. Their irresponsible outbursts usually follow a set pattern. First, they work themselves into an oratorical frenzy describing, in lurid phrases, the sad conditions which exist out at the crossroads. Next they pour out their wrath against everybody and everything not associated with their own petty group nor in strict accord with their own warped views. Then they describe in inspired terms their own patented formula for economic bliss, preferably named with a respectable, borrowed slogan, and dressed with such glittering oratorical tinsel that few bother to examine what lies behind the curtain of hot air. And, finally, they launch into the phase which delights them most. It consists of an unrestrained and detailed description of the speaker's own sterling virtues, leaving out nothing which might convince the listeners that here, at long last, is the example of human perfection for which the world has been waiting.

The order may vary slightly, but the contents will vary only the slightest degree. Without responsibility, these egotistical, comic-strip, would-be leaders of agricultural thought are free to play the demagogue. Answerable only to themselves or a noisy, deluded handful of followers, they may rant and declaim without fear that an intelligent and alert constituency will trip them up when they are called to their annual accounting. They constitute clownish American copy of swashbuckling, egotistical, sawdust Caesars across the water, consulting only with themselves as the fountainhead of unsullied wisdom, and offering to those who will give them ear only their own infallible formula for economic bliss.

Fortunately, the number who fall into this second category is small and their following too slight to have much more than a reasonable amount of nuisance value.

Most farmers refuse to be enchanted by the oratorical magic of the self-announced Messiahs. Those who are honestly and intelligently interested in solving their problems have the good judgment to organize with their neighbors, compromising their differences in drafting their program of action, pooling their collective wisdom in selecting leaders to represent them, and drawing upon their courage and determination to stay with their organization until the victory is won. In such a group there is no room for those who cannot abide by decisions arrived at through democratic processes.

In this third category will be found the representatives of the Farmers' Union, owing allegiance to no individual, but pledged wholeheartedly to the principles and ideals established by those who democratically elected them to positions of leadership.

In the Farmers' Union we believe that the collective judgment of our members, democratically expressed at their annual conventions, is superior to the dictates of any self-proclaimed prophet, regardless of how long or how loudly he proclaims his own virtues. We

who compose the elected officialdom of the Farmers' Union are proud to serve an organization of actual working farmers with 37 years of honorable history. We propose to continue as members of our organization regardless of whether we continue in office or whether our personal views are accepted by the members. We expect to serve our cause and our people faithfully. We know, and we heartily approve, the principle that we shall be rejected by our people if we fail to have sufficient regard for their wishes. So it has been in the past; so it will be as long as democracy exists in the organization. We will not play the ingrate in attempting to ruin that which we cannot rule with our own individual views.

The time will never come when the Farmers' Union will sell its birthright of democracy for a mess of political pottage, regardless of how guileless and enchanting may be the name with which the pottage is christened. Neither will the time ever come when the Farmers' Union will be the pliant tool of any individual, regardless of his self-announced virtue. The Farmers' Union is bigger than any man in it, the pooled strength and the pooled intelligence of farmers organized in their community locals from coast to coast.

We would be doing our people little service by retinting the agricultural picture and chanting over and over again a recital of the conditions with which they are thoroughly familar. Neither would we be doing our people any service by squandering our time denouncing conditions and castigating those who, sincerely or with malice, oppose our views. And, finally, we do not propose to simply prolong agricultural agony by dangling before our people high-sounding objectives without proposing workable, practical, democratic methods by which those objectives might be attained.

Not long ago an outstanding agricultural authority made the statement during a national broadcast that while farmers constituted more than 24 percent of the population of the United States, they received less than 11 percent of the national income. These brief figures sum up, to a great degree, the cause of the numerous problems which beset agriculture.

All who honestly champion the cause of stricken agriculture agree that the flow of the national income must be adjusted to accord to farmers their just share. The members of the Farmers' Union have, for 37 years, conducted a program of education among themselves and their neighbors designed to develop understanding and action in accomplishing the proper division of the national income and preserving our dearly won democratic rights.

Out of these many years of struggle the members of the Farmers' Union have developed two devices with which to attain their objective. They recognize, first, their duty to help themselves in the market places by establishing their own business institutions, cooperatively owned and democratically operated. They know that it is futile to denounce a business system, owned by somebody else and operated for private profit, which has historically failed to give farmers a square deal. Consequently they have slowly but steadily built their own cooperative business structure through which they may purchase their needs and through which they may market the products of their labor. Only the slovenly and the irresponsible refuse to use their economic power.

They recognize, secondly, the necessity of seeking, through legislative action, those things which can be secured only by such action.

We became practical enough long ago to realize that a program which does not include both economic cooperation and progressive legislation will fail. We know that by legislative action our cooperative business enterprises can be destroyed overnight by those who are the beneficiaries of the profit system unless we are eternally vigilant. We know, on the other hand, that it would be silly, impractical, and utterly tragic if we staked everything on the turn of a legislative card.

We have come to realize that what one political Congress may give another political Congress can take away. We recognize, too, the great danger that lies with relying upon Government to do for us the many things we can do for ourselves.

The countries of the world wherein a balance has been achieved between the people's cooperative economic action and the people's progressive legislative action enjoy the greatest degree of economic well-being and stand in the least danger of dictatorship from either the right or the left. The countries of the world in which the people have relied solely upon government for their economic salvation have witnessed the destruction of democracy and the regimentation of the people in a strait jacket of beaurocratic oppression from which there is no appeal. Refusing to regulate their own economic and social life, depending upon demagogues to do for them what they should have done for themselves, one-third of the people of the world have fallen into a trap of their own making.

Those who issue tirades advocating one or more legislative proposals as the certain and only path to an agricultural paradise, consciously or unconsciously are laying the ground work for a repetition of the scourge which destroyed democracy in a dozen countries of the world. Consciously or unconsciously they ape the formula which modern history describes as the death knell to freedom.

The Farmers' Union prefers the middle course, relying too much on neither legislative action nor cooperative enterprise, yet employing both so as to advance safely and steadily on both fronts. We shall do for ourselves in cooperative business those things which we are capable of doing; we shall ask of Congress those things for which society as a whole is responsible.

In order to clarify the Farmers' Union stand on agricultural legislation, it is necessary that we repeat our position at regular intervals so that none will be misled by those who seek to becloud issues and create harmful confusion.

While there has been general agreement as to the objectives to be attained through legislative efforts, various slogans have been coined to express those objectives. The Farmers' Union has, for several years, rallied around the slogan of "Cost-of-production prices for agricultural commodities." The slogan has an interesting origin. During 1923–25, more than 40,000 farmers in the North Central Wheat States, members of the National Producers Alliance, coined the phrase "cost of production" to express the aim of their organization. On May 24, 1925, representatives of the alliance attended a meeting of all farm organizations in the Middle West, called by Charles Barret, who was then and had been for many years previous to that date, president of the National Farmers' Union. The representatives of the National Producers Alliance brought their slogan with them and convinced others of its merit. It later was adopted by the Corn Belt Federation, and, finally, when the National Producers Alliance merged with the Farmers' Union, "cost of production" became the stated objective of the Farmers' Union.

The slogan was not the invention of a single individual handed to him out of a burning bush, neither is it the property of any single individual who may use it to dress up his own patented formula. It was conceived by a democratically organized farm movement and should be used to describe an objective, not a particular set of mechanics.

No one argues the justice of granting to farmers prices equal to cost of production, provided, of course, that they operate their farms with a reasonable degree of efficiency. Disputes arise, however, in determining how cost of production is to be secured.

The Farmers' Union has sponsored several sets of legislative mechanics, each differing in some degree from its predecessors. It has had the courage and the wisdom to modify its methods to meet changing conditions without losing sight of the ultimate goal and without surrendering its long-time principles.

A good general does not use one plan of battle time after time if that plan always results in defeat. Neither does a good general use the same plan of battle under all conditions; he knows that a plan which might work well under one set of circumstances would fail miserably under others. Keeping in mind the objectives of winning the war he varies his battle plans to suit varying fighting conditions. He is fired if he wastes his time boasting about the superiority of his one plan of battle but turns in nothing but a dreary succession of costly defeats. He is a worthy leader if he has the wisdom to devise effective battle plans to cope with changing circumstances. He owes allegiance to a cause, not to a particular blueprint of his own invention.

The Farmers' Union will continue to be realistic in developing legislative mechanics. It will ignore the discredited generals who boast of their own genius, promise much, but deliver nothing but defeat.

In its quest for sound farm legislation, the Farmers' Union is rigidly committed to certain definite principles.

(1) The Farmers' Union will never consent to placing within the hands of any one man, be he President, Secretary of Agriculture, or self-proclaimed genius, the power to fix the prices of agricultural commodities. It will never consent to placing the destiny of the American farm population in the hands of any individual or any set of individuals anywhere.

Those who advocate Fascist farm measures are given to splitting hairs by presenting the pointless argument that the responsibility of fixing prices presents the individual concerned with a duty, not a power. Such strained reasoning is not a compliment to the intelligence of its author. Surely it would be senseless to charge a man with a duty unless he were also given the power to carry out that duty.

To the greatest possible degree all agricultural legislation should be developed out of conferences of actual farmers democratically represented, and should be administered by actual farmers democratically elected. The Farmers' Union will vigorously oppose individual day dreams, spun out of the fertile imaginations of agricultural quacks, and embodying the principles of totalitarian bureaucracy.

(2) The Farmers' Union will oppose to the limit of its strength any agricultural legislation which does not specifically afford protection for the family size farm as opposed to the corporation farm.

A vertical increase in farm prices will not alter the advantage currently enjoyed by the multiple-farm operator in an increasingly mechanized agriculture. A vertical slash in acreage or marketing allotment will fall heaviest upon the operator of the family farm unit. Cost-of-production prices should be paid to farmers, not to farms. Many thousands of family unit operators, even under normal circumstances, cultivate acreage and market a volume of products too small to provide a decent standard of comfort and security even under a cost-of-production price structure. If cuts in acreage or the imposition of marketing allotments are to be used in raising the level of farm prices, such acreage cuts and such marketing restrictions should fall heaviest on the corporation farm and the multiple farm operator.

If the land of this Nation is to be held in large tracts and operated by expensive machines, we prefer that the land and the machines be owned cooperatively by the farmers themselves instead of by absentee landlords or corporate interests.

(3) The Farmers' Union will never sponsor an omnibus measure offering the same mechanical cure for every farmer regardless of the commodity and the conditions involved. We will never be found guilty of bad generalship in proposing the same plan of

battle for every set of circumstances. Neither will we follow the practice of the old-time doctor who, being unable to diagnose the patients illness, gave him a concoction containing medicine for every ailment mentioned in his medical library, hoping that one of the ingredients would have the desired effect. The patient died.

Each commodity should be considered on its own merits. Each commodity should be given treatment suited to the peculiar conditions under which it is produced, marketed, processed, and distributed to the consumer. Correct treatment for one commodity group might be fatal to another.

(4) The Farmers' Union will never support agricultural legislation which would require farmers to turn over their total production to the pirates of the market place. It will always advocate the retention of surplus production on the farmer's farm or in his own cooperative facilities, under his own control.

(5) Finally, the Farmers' Union will neither sponsor nor support legislation which will put a strait-jacket of bureaucratic control around our cooperative marketing agencies, thus limiting and crippling our economic freedom and our right to build a business world cooperatively owned, democratically operated, and pledged to service for the many rather than profit for a few.

In furthering its legislative program, the Farmers' Union has caused to be introduced in the current session of Congress a number of important bills. First and of great importance to those of us who come from the wheat country, is the wheat bill, commonly known as the Farmers' Union wheat-income certificate plan. The Farmers' Union wheat bill will achieve cost of production or parity, whichever is higher, on that portion of our wheat domestically consumed and our fair share of the world market. It embodies the principle of protection for the family-size farm. It guarantees at least a partial income to farmers year in and year out as long as they honestly attempt to produce, even though natural calamities may destroy crops, such as has been the case in my State for several years. It accomplishes these things without imposing a strait-jacket on the marketing system, without costing the Federal Treasury a penny except for administrative costs, without surrendering democracy and without requiring an army of secret police to enforce its provisions. Our measure has been introduced in the Senate by Senator BURTON K. WHEELER, of Montana, and in the House by Congressman MARVIN JONES, of Texas, chairman of the House Committee on Agriculture.

Under the sponsorship of Senator JOSH LEE, of Oklahoma, the Farmers' Union has caused to be introduced its cotton bill, employing a similar income-certificate plan. The same basic principles as outlined for the wheat bill apply to the cotton bill.

Under preparation or already introduced is the Farmers' Union dairy bill employing different mechanics because of the differing factors involved, but adhering to the same basic principles previously outlined.

Of equal importance and perhaps of even more far-reaching significance is the Farmers' Union debt-adjustment measure introduced by Senator WHEELER. The debt-adjustment bill aims to protect the farmer whose farm bears a mortgage held by any Federal credit agency. The measure provides for scaling down the debts owed by farmers to Federal agencies to the ability of the farmer and the farm to pay. It will, if enacted into law, halt the present foreclosure policies of the Federal land bank and the current collection policies of the seed- and feed-loan agencies.

Copies of these measures may be secured by writing to the individual sponsors.

Other measures involving other commodities and other situations will be introduced as rapidly as our committees have agreed on a formula and have drafted into proper form their recommendations.

The Farmers' Union will continue to advocate and build toward a better world than the one which presently exists. It will not be intimidated; it will not surrender a single one of its cherished principles; it will not be vanquished. It will have sufficient vision to see a world free from exploitation, and it will have sufficient wisdom to devise the practical steps which must be taken to reach that world. Its members will shun the honeyed proposals of America's "sawdust Caesars" who boast of a following which does not exist, and as our Farmers' Union creed so well states it, "We will always remember that, greater than any man in it, worthy of any sacrifice, deserving of all faithfulness, is the union itself, built for us and by us, our own organization."

Purchase of Foreign Silver

EXTENSION OF REMARKS

OF

HON. JOHN G. TOWNSEND, JR.

OF DELAWARE

IN THE SENATE OF THE UNITED STATES

Tuesday, July 11 (legislative day of Monday, July 10), 1939

EDITORIAL FROM THE NEW YORK TIMES OF JULY 11, 1939

Mr. TOWNSEND. Mr. President, I have been gratified by the support of our great American newspapers in my efforts to bring about the termination of the purchase of foreign silver by the United States Treasury. I ask leave to have inserted in the RECORD an editorial from the New York Times of this morning, July 11, 1939, as an example of editorial comment on this subject.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

[From the New York Times of July 11, 1939]

THE FOLLY OF FOREIGN SILVER

One of the most significant facts about the recent controversy in the Senate over the monetary bill was the willingness of many Members of the "silver bloc" to let the whole plan for purchases of foreign silver go into the discard, provided only that a sufficiently high price was set for their own precious metal—and pegged there by act of Congress. Yet, after all the skirmishing, we find in the monetary bill as finally passed by both Houses and approved by the President no suggestion of any change in the status of foreign silver. It is still the official policy of our Government to keep on buying foreign silver, for which we have no earthly use, until one of two unlikely things happens—until one-fourth of our monetary reserve consists of silver metal or until the price of silver reaches $1.29 an ounce (compared with a present figure of 35 cents in a falling market).

There is no justification whatever for the foreign silver purchase program. Considered as economics it amounts to a policy of deliberate self-impoverishment, a method of transferring purchasing power from the hands of Americans to the hands of foreigners, a business of giving away, as far as our balance of payments is concerned, cotton and copper and automobiles and other useful domestic goods almost literally for nothing. Considered as politics, it may be a convenient instrument in Mexico and China, but it is no instrument to be proud of. If the American people believe that they owe any foreign government their financial support, they can give that financial support directly and not under the subterfuge of doing something else.

Senator TOWNSEND, of Delaware, has introduced a bill which would stop this folly. It ought to have the support of every intelligent Member of Congress, and it ought to be passed at this session.

Neutrality

EXTENSION OF REMARKS

OF

HON. ROBERT R. REYNOLDS

OF NORTH CAROLINA

IN THE SENATE OF THE UNITED STATES

Wednesday, July 12 (legislative day of Monday, July 10), 1939

STATEMENT BY LOUIS B. WARD

Mr. REYNOLDS. Mr. President, I ask unanimous consent to have published in the Appendix of the RECORD the second and final installment of that most informative and interesting statement made by Hon. Louis B. Ward before the Foreign Relations Committee of the Senate pertaining to the subject of neutrality.

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

PART IV. THE SECRET TREATY

Mr. Chairman and members of the committee, of all the causes of modern wars I beg you to study, the greatest is the system of secret alliances or treaties, secret agreements, secret understandings, unknown to the Constitution of the United States, likewise unknown to the unwritten constitution of Great Britain, but existing, nevertheless, in utter defiance of both world powers.

For 3 or 4 minutes I want to take you back to August 1914. On the 3d of August the German "white book" was issued, showing, by 27 telegrams carefully selected, that Germany was fighting in self-defense against Russian aggression.

Three days later, and on August 6, 1914, the British "blue book" was issued, showing 159 selected documents proving that Great Britain was for peace, but Germany and Austria prevented it.

One day later and on August 7, 1914, the Russian "orange book" was issued, showing by 79 selected documents that the war guilt was on the Central Powers.

In October the Belgian "gray book" was written, showing by 79 documents that Germany violated international law.

On November 18, 1914, the Serbian "blue book" was presented, showing by 52 documents that Serbia was the victim of Austrian aggression.

On December 1, 1914, the French "yellow book" was issued, showing Germany was the aggressor.

And on February 3, 1915, the Austrian "red book" was issued, showing by 69 documents that the Triple Entente—England, France,

and Russia—had encircled the Central Powers and were the aggressors.

Mr. Chairman, I commend the rereading of the seven compilations of documents. They are all the same. All protest the virtue of their cause, all depict the vice of the enemy. They remind me of Tom Moore's poem, memorized many years ago, with the famous couplet:

"On our side is virtue and Erin,
On theirs is the Saxon and guilt."

We recall Robert Lansing's commission on the responsibility for the war. We recall that he refused to look at any evidence except that which showed the Central Powers guilty.

Behind the variously colored books of the European powers protesting their virtue and disclaiming their guilt were the secret treaties which I will merely record, as they formed an amazing background for the World War:

(1) The League of the Three Emperors, in 1872, between William of Germany, Alexander of Russia, and Francis Joseph of Austria, pitted monarchical solidarity against international socialism. It was a secret treaty that half a century later was to see Alexander's czaristic power in the hands of the Communists, William of Germany's monarchy communism saved by dictatorship, and Austria awaiting the new hegemony of Hitler's Europa.

(2) The Austro-German alliance of 1879 secretly broke the tripartite agreement between Russia, Germany, and Austria and was the initial historic fact which drove France and Russia together in an alliance which ultimately would defeat Germany in the World War.

(3) Two years later the German-Russian secret treaty of 1881 temporarily repaired the wire from Berlin to St. Petersburg.

(4) The alliance of the three emperors, from 1881 to 1887, reunited Russia, Germany, and Austria.

(5) The secret treaty of 1887 between Russia and Germany was written to parallel the German-Austrian Treaty of 1879, but still the three powers could not trust each other.

(6) The triple alliance of 1882, between Germany, Austria, and Italy, left Russia out and became the second step in uniting France with Russia.

(7) The Austrian-Rumanian pact of 1883 was a secret pact against Russia, called defensive, of course. Germany endorsed it the same day, and Italy in 1889, thus making it a quadruple agreement. It was finally renewed February 5, 1913, and was in existence as legally extended to July 8, 1920, throughout the days of the World War, when Italy was our associate and Germany was everywhere blasted for regarding her treaties as scraps of paper.

(8) Franco-Russian secret alliance, 1890. France financed Russia to the extent of 2,400,000,000 francs in 1888, and supplied her with Lebel rifles in 1889. They entered a secret alliance in 1890 and reinforced it in 1894 to the extent of cooperation in case of aggressive attack. It was absolutely unconstitutional for France to have a secret treaty, yet the pact was signed to the effect that if the triple alliance mobilized, it meant the mobilization of France and Russia, and its duration was coextensive with the triple alliance.

(9) England deserts "splendid isolation," January 19, 1898, attempts treaty with Russia.

At Alfred Rothschild's house, May 29, 1898, Joe Chamberlain met Count Hatsfeldt. Chamberlain asked for an Anglo-German defensive alliance. He wanted a publicly approved treaty with Germany, because a secret treaty would not bind future cabinets. England sought this treaty for seven reasons: (1) Friction in central Africa with France; (2) friction on the upper Nile with France; (3) friction in Sudan with France; (4) friction in South Africa with the Boers; (5) friction in Kiauchau, New Germany; (6) friction in Manchuria with Russia; (7) Russia had taken Port Arthur and threatened England in the Far East.

Result: The Kaiser told the Czar of England's offer and attempted to form the continental league.

(10) The Continental League—Russia, Germany, Austria, Italy, and France.

(11) England and the United States. The Boer War had made England hated on the continent. In November 1899 the Kaiser visited England. Joe Chamberlain at Leicester publicly proposed an alliance of the Teuton and the Anglo-Saxon races. He proposed the union of the United States, England, and Germany, races that differed so slightly in character, as a triple alliance of the two great branches of the Teutonic race. Germany turned it down. The King and Queen are now renewing the offer.

(12) 1901, Joe Chamberlain opened negotiations for an alliance between England, Germany, and Japan. 1902, England and Japan sign an alliance.

(13) 1904, England and France sign a treaty, the beginning of the Triple Entente.

(14) Italy stays in the Triple Alliance with Germany and Austria, and then makes a secret treaty with France, between 1900 and 1902.

(15) The Anglo-French entente of 1904. This was a broad arbitration treaty, signed October 14, 1903, when Edward VII visited France. Two months later President Loubet returned the visit.

On April 8, 1904, the Entente Cordiale was signed. It covered the Newfoundland fisheries dispute, the Senegambia dispute, the sovereignty over Siam, Madagascar, the New Hebrides; and England was given a free hand in Egypt in exchange for a free hand given France in Morocco.

In this connection, it is extremely important to note that King Edward VII was a new King in 1903, who knew how to make a tactful speech, with flattering appreciation and hearty personal good will. Here is the speech of Edward VII in 1903 in France. We may expect its repetition here in the United States. I quote in part:

"The days of hostility between the two countries are, I am certain, happily at an end. I know of no two countries whose prosperity is more interdependent. There may have been misunderstandings and causes of dissension in the past, but that is all happily over and forgotten. The friendship of the two countries is my constant preoccupation, and I count on you all, who enjoy French hospitality in their magnificent city, to aid me to reach this goal."

(16) The Kaiser and the Czar signed the Björkö Treaty of Alliance, canceled when the Czar withdrew, 1904.

(17) Germany, by stopping partition of Morocco by France and England, forced England to the side of France, 1905.

(18) The Anglo-French conversations: These were not treaties, but informal alliances with military arrangements and independent military plans. Under these conversations, by 1911 Sir Henry Wilson was riding Belgium on a bicycle covering every road for the attack on Germany. By 1911 General Dubial was able to assure his Russian colleagues that the French Army was able to take the offensive against Germany with the aid of the British Army on its left wing (Belgium).

(19) The Anglo-Russian Entente, 1907: England and Japan had been allies since 1902. England now formed an alliance with Russia in 1907. The Russo-Japanese treaty was signed in July 1907. It provided the open door for the Far East and the status quo, yet behind it was the secret agreement on spheres of influence in Manchuria in a supplemental treaty signed between Japan and Russia, who pooled their interests after their bitter war, to the exclusion of third parties.

Japan and France had a treaty for the Far East.

The Anglo-Russian treaty provided for the partitioning of Persia, with Russia taking the northern half and England the southern half.

From 1907 on, Russia, France, and England were referred to as the Triple Entente.

While Russia, England, and France formed the Triple Entente, Germany, Austria, and Italy formed the Triple Alliance. From 1907 to 1914 came the armament race.

(20) In 1909 came the German-France treaty settling the Morocco affair.

(21) In 1910 came the Russian-Italian secret treaty.

(22) In 1912 came England's secret naval treaty with France.

(23) On March 3, 1912, Russia revealed to Poincare that a secret Balkan League agreement was drawn by Russia in the preceding winter. Then came the Balkan wars.

I quote, that no man on this committee may ever mistake the duplicity, the hypocrisy, the lack of sincerity, the downright treachery of foreign relations, as I picture our own beloved United States in the spring of 1914, with the Triple Alliance and the Triple Entente, standing not side by side but face to face, Colonel House going to Europe and writing back in the midsummer of 1914, a month before the assassination of the Austrian archduke—and I quote:

"The situation is extraordinary. It is militarism run stark mad. Unless someone acting for you can bring about a different understanding, there is some day to be an awful cataclysm. No one in Europe can do it. There is too much hatred, too many jealousies. Whenever England consents, France and Russia will close in on Germany and Austra. England does not want Germany wholly crushed, for she would then have to reckon alone with her ancient enemy, Russia; but if Germany insists upon an ever-increasing navy, then England will have no choice. The best chance for peace is an understanding between England and Germany in regard to naval armaments, and yet there is some disadvantage to us by these two getting too close."

PART V. PROPAGANDA

Mr. Chairman, what I term the fifth and greatest cause for war is foreign propaganda.

I know of nothing more stupid than American propaganda, than that of the German, the Italian, the Japanese, the Chinese, the Central European, the South American, Central American, or the Mexican powers.

I know nothing more brilliant than John Bull and his Northcliffe Press. Pastmasters at propaganda, they started soon after America declared her independence, with songs and verses in the American schoolbooks of three-quarters of a century ago.

A few years ago a great Irish friend of mine dug out from a grammar-school textbook a little verse, actually studied in an American classroom:

"I thank the goodness and the grace
That on my birth did smile
And make me choicest of the race,
A happy English child."

There isn't 1 percent of the population in America that knows the words of the third verse of the Star Spangled Banner.

In our public meetings we are prone to sing America with the identical tune of God Save the King.

Years ago Cecil Rhodes drafted the will that took two boys annually from each State of the Union over to Oxford under the name of scholarships, with the object of bringing back English propaganda to denationalize the Nation.

Andrew Carnegie dedicated the fortune made in America to proselytizing our freeborn, to dedicate them to a re-United States.

Shamelessly did the British Treasury leave $150,000,000 and 10,000 foreign agents in America to whip us into the World War.

You could buy college professors by the hundred, as you can buy them today, to prostitute their feeble mentalities for the British Crown.

Now come the King and Queen. It was 1497 when John Cabot landed, and from 1497 to 1939 no British monarch ever laid foot on America. There were characters in those days—Gosnold and Raleigh, Drake and Frobisher, and a hundred others. With their Blackbeards and Morgans they laid off the Spanish Main, parasitic vultures on the wealth of that far-off day.

There were colonizers, from Smith in Virginia to the Pilgrim Fathers, to the Calverts and Carterets, the Penns and the Oglethorpes. There were patriots in later days—James Otis and Patrick Henry, the Adamses, the Randolphs, the Washingtons, and on down through the line.

But not an English King, much less a Queen, from Cabot's voyage in 1497 until the last sailing of the *Queen Mary* in 1939.

If you are studying neutrality, peace legislation, and a foreign policy, for God's sake rid the nation of the rats of foreign propaganda that would bring upon us the bubonic plague and the black death of war.

Keep the freedom of the press, but make it register the foreign sources of the paid propagandist.

Keep the academic freedom of the schools, but let them record the vultures from foreign shores or the domestic agents, the professors, who take foreign cash for prostituting the American mind on the altar of foreign propaganda.

CONCLUSION

I suggest, in conclusion, five definite steps to those of you who honestly and sincerely desire to prevent America's inclusion in the next great world war:

1. Under penalty of heavy fine and imprisonment register, with his assumed name and true name, every resident of America, including editors, employees of newspapers, radio commentators, magazine writers, special feature writers, syndicate writers, professors, public speakers, Members of Congress, civilian and military employees of the United States, Cabinet members—all—directly or indirectly in the pay of any foreign government, as propaganda agents in America, and be not satisfied until 10,000 names appear.

2. Question carefully the military, the naval, and the air forces concerning "conversations," for that is the name given the English-speaking world by Sir Edward Grey to denote those practical military and naval alliances between the international military egotists who now, as in the years before 1914, work out joint military operations—informally, of course—only to find their understandings binding their nations in "honour."

3. Beware of secret treaties. Obviously these are as unconstitutional in this Nation as they are in England or in France. Yet, why deceive ourselves, when Edward Grey denied their existence on August 3, 1914, only to admit that the Empire was bound in honor on August 8, 1914?

Why deny them when France, which prohibited them by law, found herself enmeshed in illegal treaties since her defeat by Germany in 1870?

In this country the great danger is the stabilization fund, operated by Henry Morgenthau, Jr., in conjunction with Leon Blum, of France, and Sir John Simon, of England. Abolish this secret cause for distrust among the nations, that we shall not enter through the financial door, the $2,000,000,000 golden door of stabilization, the secret understanding and pact.

Fourth, beware economic imperialism. Its only cure and defense is social justice. Legislate for the great masses with the understanding that the rich have ample means of providing for themselves and need not your protection.

Lastly, beware an exaggerated militarism that tempts men in high place to consort with kings and the great of this world, forgetting that no state ever rose to true and lasting power except on the prosperity of the average man.

Mr. Chairman, I do not care to be dogmatic, but rather definite and factual. I have covered only a few phases of modern world history in 60 minutes of allotted time. The attempt to present the causes of war is meant to be inclusive and not exclusive. Frankly, the outline is of necessity sketchy, leaving to the keen students of history of this committee suggestions only which their own good minds will follow with the detail necessarily omitted.

I thank you.

Cornerstone Laying of Doctors' Hospital

EXTENSION OF REMARKS

OF

HON. HARRY FLOOD BYRD

OF VIRGINIA

IN THE SENATE OF THE UNITED STATES

Wednesday, July 12 (legislative day of Monday, July 10), 1939

ADDRESS BY HON. ROBERT A. TAFT, OF OHIO, JULY 11, 1939

Mr. BYRD. Mr. President, I ask unanimous consent to insert in the Appendix of the RECORD the able address delivered by the Senator from Ohio [Mr. TAFT], on July 11, on the occasion of the laying of the cornerstone of the Doctors' Hospital at Washington, D. C.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

It gives me the greatest pleasure to say a few words at the laying of the cornerstone of the Doctors' Hospital here in Washington. Almost unique among similar enterprises of the present day, this building is being constructed entirely from private resources, without Government assistance of any kind whatsoever. It is designed to provide 250 additional hospital beds for the District of Columbia, of a simple but efficient character, designed to reach patients who can pay approximately $6 a day either from their own resources or as members of the hospital associations, which have been extended so widely in the District. It has been organized, and the money raised by doctors, to meet the local need for hospitals, in a city which is perhaps growing faster than any other city in the United States because of the increased activities of the Government departments. I enjoy the opportunity of praising the initiative of the medical profession of the District in working out its own problems without lying down on the Government.

To some extent the medical profession is subject to the same criticism which is often directed at members of the legal profession. The abler members of the profession are likely to become so busy in their own practice that they pay too little attention to the question whether the profession as a whole is covering adequately its whole broad field of public service. Because their own task is well done, they are likely to feel no great concern about the question whether the administration of law or the administration of medicine is serving the public and the country as it should. Of course, this is only a generalization, for countless reforms in the field of law have been initiated by lawyers, and countless reforms in the field of medicine by doctors. Here today we see how constructive enterprises are carried through to success if a few men are willing to devote their time and energy to the task.

We have before us in Congress today the National Health bill introduced by Senator WAGNER proposing to extend vast Federal assistance throughout the field of public health and medical care. It appropriates, out of our growing deficit, approximately $100,000,000 of Federal money the first year, and gradually increasing sums thereafter, until in 10 years it will cost the Federal Government more than $400,000,000, and require the States to supply approximately the same amount. This money is to be distributed to those States which have adopted State plans in various fields of medical work. In general the character of the plan is left to the State, but the appropriation of money collected from all the States to those States which go along with the program forces all the States as a practical matter to adopt some plan in each one of the fields covered by the bill. Six categories of State activity are provided for, namely, maternal and child welfare, handicapped children, public health work, hospitals, general medical care, and sickness insurance. The bill has been strenuously attacked by many witnesses from the medical profession, and is not likely to be pressed at this session, but I believe that in 1940 a Federal medical program of some kind will be adopted. What form it takes depends largely on the medical profession. I am most hopeful that the doctors determine what comprehensive program can be adopted to improve the health of the American people, and that they propose a practical measure to assist that program.

The present bill seems to me needlessly complicated. Its administration will take place under three different Federal Departments. Every State must adopt at least six separate plans, and for each plan there is an advisory committee, so that the bill will create approximately 300 different boards, largely composed of laymen. Surely the Federal health program ought to be consolidated under one head, and each State program ought to be worked out as far as possible under a single State department. The doctors feel very strongly, and I think justifiably, that while the Wagner bill does not itself contain specifically a program of socialized medicine, it is proposed by those who favor socialized medicine, and is open to the suspicion that it will afford a vehicle through which they may put their State-controlled medical care into effect. I feel confident that proper amendment of the bill can prevent such a result. We should be, above all, concerned that every patient retain the right to select his own physician, so that the personal relationship may not be disturbed and the success of the individual physician may depend on his real ability instead of his political connections. We should be concerned that no great proportion of the doctors ever become employees of government. I see no reason why the present condition of individual service should not be preserved, even though we adopt the principle of Federal financial assistance.

Undoubtedly the deficiency in medical service in many parts of the United States has been exaggerated in the report of the sponsors of the bill, but nevertheless there is a lack of such service, resulting principally from the poverty of millions of American citizens. Unable to pay for medical service, they find no service at all in some rural sections; or they find the free service supplied by their cities or States inadequate or ineffective; and they may not be fortunate enough to receive any of the tremendous amount of charitable service provided by physicians themselves. Of course, nothing is more important than health in meeting the

problems of the average family, and, if possible, it is even more important to those unable to pay for assistance than it is for those who are better off financially.

There are those who question the wisdom of any Federal assistance in the health field, but, as in the case of relief and old-age pensions, we have found that the States and localities have practically exhausted their financial resources in dealing with the established activities of government—like schools, roads, and city services. They were unable to push on into the new field of assisting those classes which receive inadequate income through relief and old-age pensions. Most localities and States have undertaken health work, but do not have the funds to make it universally effective. Some localities have never been able to undertake it at all. Assistance from the Federal Government in some fields is essential, and such assistance seems to me justified in the field of public health, providing it is in a reasonable amount to meet real needs in a sensible and economic manner.

The sponsors of the present bill seem to grossly exaggerate the lack of hospital service in the United States. Disregarding all private hospital service, they apparently plan a vast system of public hospitals to take care of everybody who would like to go to a free hospital. Any hospital plan should certainly encourage the construction of private hospitals and their use by public and private patients to their full capacity. It should encourage private plans of hospital insurance, which will assist the success of private hospitals and reduce the expense of operating public hospitals. The construction of this Doctors' Hospital here in Washington shows that a large part of our problem may be met without the pouring out of more millions from the Federal Treasury and without turning over to some State or Federal official the entire determination of who shall receive hospitalization and when he shall receive it; and the hospital plan ought to be worked out deliberately to encourage philanthropic persons to invest their own money in the extension of private hospital service, as they have so liberally invested it during the past 50 years.

There is hardly a field in which there has been more sensational and continuous improvement than that of medicine in the United States. That improvement has been due to the brilliant, unselfish, and industrious work of thousands of physicians. It is not their fault that incomes are unequally distributed, and that efforts by local government to cover the entire field of health have been restricted by lack of resources. But now I hope they will take an active interest in seeing that the unequaled medical service received by most Americans is extended to the entire population. Their own interest and participation in the program will make it certain that it is not dominated by half-baked theorists, or by those who believe in a totalitarian state, directing the lives and caring for the health of all its citizens through the mechanical and usually careless action of Government bureaus. I believe a Federal-aid program can be worked out. I believe it can be much simpler and much more economical, and much more likely to preserve the essential independence of the doctors than the present Wagner bill. I believe it can be worked out with the assistance and cooperation of the doctors themselves.

The Roosevelt Administration

EXTENSION OF REMARKS

OF

HON. ALEXANDER WILEY

OF WISCONSIN

IN THE SENATE OF THE UNITED STATES

Wednesday, July 12 (legislative day of Monday, July 10), 1939

ARTICLE BY GEN. HUGH S. JOHNSON

Mr. WILEY. Mr. President, I ask unanimous consent to have printed in the RECORD an article by Gen. Hugh S. Johnson relative to certain phases of the Roosevelt administration.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

ONE MAN'S OPINION

(By Hugh S. Johnson)

It is worth noting how new verbal gadgets are given little rides by administration spokesmen of the inner circle and then dropped. The rise, decline, and fall of the 60 families in administration speeches is an example.

Now the story brought by repetition to a point of absurdity by Senator GUFFEY is that Mr. Roosevelt has had no terms because his first was frustrated by the courts and his second by the Tories.

That is about as silly as it can be, because, except for a few slight hindrances, Mr. Roosevelt has been permitted to dose this sick country just about as he desired for going on 7 years—and now look at the darned thing!

Yet there is no doubt that Mr. Roosevelt has been frustrated. I have never wavered in my opinion that he is potentially one of our greatest leaders. Recalling his first "hundred days," I doubt if there is a similar period of so short duration in all history where so much was accomplished so brilliantly. As Mr. Raymond Moley has pretty well established in his recent memoirs, the so-called "brain trust" of those early days was no steering committee of government, no palace janissariat in the later sense. Mr. Roosevelt was rolling his own so far as fundamental policy was concerned. I know, because I was there. I worked hard to prepare stuff for him, but it was always on some special assignment from the boss.

It never occurred to me to suggest political policies. I vividly recall hearing him say to B. M. Baruch, "Now, Bernie, I take your judgment on economics and need it badly. But I think that, both on experience and record, I am better on the political side—that's my profession." So it always seemed to me. I regard him still as a political genius—as long as he paddles his own canoe.

But Mr. Roosevelt who spoke so bitterly and blusteringly at Madison Square Garden after the election was overwhelmingly in the bag, or in his second inaugural, was a very different Roosevelt from the one I talked to when I decided to go out and support him in 1936 with everything I had. Then I thought that he had decided to make his place in history, by consolidating his gains, ushering in an "era of good feeling" and bringing this country out of this depression.

Later it was very clear that someone had sold him the feared idea that he "had a mandate" and that the election proved it to be better politics to revolutionize this Government on an extreme formula of "reform before recovery"—that he hadn't yet gone half far enough.

As I think, it was one of the greatest of human tragedies—like Napoleon's march on Moscow. In January 1937, Mr. Roosevelt, using the political methods of personal leadership, charm, and compromise which are native to him—which he had practiced all his life and had put him in his high place—could have had anything within reason that he wanted.

Of far greater importance, he could have rallied this country and restored its cohesion and confidence to go forward to the greatest prosperity of our generation. But no—he surrendered his professional judgment to political amateurs. He was persuaded to try to dragoon Congress, the courts, and the great middle strata of our country by purges, attacks, and reprisals, and by appealing to class hatred, prejudice, and resentment—to become a President of fierce factions rather than a President of all people.

The resulting chaos ruined his second term and threatens now to rob him of everything he and the country could have had. If it were not for his fiery pride, his intense personal loyalty, and a stubbornness rarely equalled, I would wonder why he doesn't look around him at these architects of his own and his country's misfortune and say: "God save us from our loving friends." Of course, he is personally responsible—but it could have been so different—and so much better.

Comments on the Pope Memorandum Entitled "Has the Tennessee Valley Authority Injured the Coal Industry?"

EXTENSION OF REMARKS

OF

HON. ANDREW J. MAY

OF KENTUCKY

IN THE HOUSE OF REPRESENTATIVES

Wednesday, July 12, 1939

STATEMENT BY HERBERT S. SALMON

Mr. MAY. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following statement by Herbert S. Salmon, of Alabama:

The Pope memorandum deals with the consumption of coal and the generation of electricity in the States of Alabama, Tennessee, Mississippi, and Georgia.

The statement in the first paragraph that the increase in coal used by the utilities is largely because of increased demand for power begs the question. Such reasoning presumes that the T. V. A. is responsible for the increased demand for power, hence is due the credit for the increased demand for coal, a conclusion which is not supported by the facts.

In this connection, reference is made to table IV of the Pope memorandum. More coal was consumed in generating electrical energy in each of the years 1925, 1926, and 1927 than has been

consumed in any year since 1934, when T. V. A. began operating. The figures are:

Alabama, Tennessee, Mississippi, Georgia coal consumed in generating electric energy

[From table IV of Pope Memorandum]

Year	Tons	Remarks
1925	1,360,000	Wilson Dam placed in service 1925.
1926	860,000	
1927	897,000	
1934	159,000	First complete year of service by Tennessee Valley Authority.
1935	213,000	
1936	357,000	
1937	695,000	
1938	677,000	

The effect on the coal industry of the substantial displacement of steam-generated energy in the four States by energy from Federal water-power plants is shown by a regrouping of figures from tables II and IV of the Pope memorandum, and the addition of another column showing coal which would have been required to supply the generation otherwise produced in Federal water-power plants. This tabulation follows:

Year	Total electric energy generated (millions of kilowatt-hours)[1]	Electric energy generated at Federal water-power plants (millions of kilowatt-hours)[1]	Estimated coal required if energy from Federal water-power plants had been produced by steam plants[2]	Coal actually consumed in generating electric energy (thousands of tons)[3]
1925	2,796	45	33	1,360
1926	3,247	439	325	860
1927	3,552	566	419	897
1928	3,682	223	165	478
1929	4,044	172	127	334
1930	3,876	306	227	228
1931	3,673	346	256	269
1932	3,475	287	213	134
1933	3,731	288	213	128
1934	4,009	207	158	159
1935	4,456	395	293	213
1936	5,347	778	575	357
1937	5,991	502	372	695
1938	6,391	1,289	954	677

[1] From table II of Pope Memorandum.
[2] Computed at 1.48 pounds coal per kilowatt-hour.
[3] From table IV of Pope Memorandum.

From the foregoing table, it is obvious that coal consumed in generating electrical energy declined steadily after 1925, when Federal water power first became available, and has subsequently failed by a large margin to attain the levels of 1925, 1926, and 1927. Moreover, a study of the foregoing tabulation shows that if the power supplied in Federal water-power plants were supplied in steam plants the earlier levels of coal consumption would in 1938 have been substantially exceeded.

The electrical load and the revenue of the companies in the four Southern States referred to in the Pope memorandum are largely dependent upon industrial activity—over 60 percent of kilowatt-hour sales to ultimate consumers are industrial—and to a lesser extent upon the residential and commercial use of electricity. The total energy sold by these companies follows closely the trend of business activity; indeed, it may be regarded as an index of industrial production and business.

In the fourth paragraph on page 1 and the first paragraph on page 2, the Pope memorandum draws attention to the fact that the generation of electricity in 1938 was 22 percent greater in the Nation as a whole than in 1929 but that the increase in the four States under discussion for the same years was 58 percent. Without in any way proving the assertion, this increase is ascribed to the stimulus of low rates "initiated by the T. V. A. and followed by privately owned public utilities." Coal-consumption figures for the generation of power in 1929 and 1938, respectively, are then quoted, showing an increase from 334,000 tons in 1929 to 677,000 tons in 1938. The reader is left to infer that the increase in coal consumption was due to the increase in electric load, and that the increase in electric load in turn was due to the low rates "initiated by T. V. A. and followed by privately owned public utilities"; therefore, that the foregoing increase in coal consumption was due to the blessings of T. V. A. The premise is incorrect, so the conclusion is erroneous. It can hardly be argued that the increase in power supply in the four Southern States was due to the stimulus of new and lower rates. In depressed times, when the products of industry cannot be marketed, the use of electricity in industry cannot be appreciably stimulated in any manner—not even by giving the electricity away. Cost of power is only one element in the cost of manufacturing, and usually a small one. Factories will not make products which they cannot sell merely to use cheap power.

It is thus absurd to say that the increase in electricity in the States of Alabama, Georgia, Tennessee, and Mississippi has been to any appreciable extent due to T. V. A. policies and rates. The use of electricity in private utility systems in these States has followed the ups and downs of business. It fell off rapidly in the fall of 1937 and spring of 1938, and recovered in the latter part of 1938. The real reason for the increase in coal consumption during 1937 and 1938, which the Pope memorandum neglected to disclose, was that during those years practically no energy was taken from T. V. A. by the privately owned public utility companies operating in the four States, thus greatly increasing the generation in southern steam plants. During 1938, the southern operating subsidiaries of Commonwealth and Southern Corporation used 587,000 tons of coal.

As mentioned above, the Pope memorandum draws a comparison between the generation of electricity in the four States between 1929 and 1938. Of course, T. V. A. did not come into full operation until 1934, so no one could successfully contend that T. V. A. had very much to do with either an increase or decrease in electric generation between 1929 and 1934. Furthermore, it is of course well known that general business reached its lowest ebb in 1933, and since that time has staged an erratic come-back, with a major set-back in the fall of 1937 and the early part of 1938. It would be much fairer, therefore, in considering the growth of electric load of the period of T. V. A.'s activity, to start with the year 1934, and end with the year 1938, taking notice of the industrial and business activity in the 2 years.

In this connection, the influence of T. V. A. upon the increase of electric consumption may be illustrated by comparing what happened in the territory of Alabama Power Co. and in the territory of Consumers Power Co. (in Michigan), respectively. In 1934 the output of Alabama Power Co. was 1,719,798,000 kilowatt-hours, and in 1938, 2,132,738,000 kilowatt-hours—an increase of 24 percent. For the same 2 years the output of Consumers Power Co. increased from 1,067,120,000 kilowatt-hours to 1,509,917,000 kilowatt-hours—an increase of 41.5 percent, notwithstanding that Consumers Power Co. territory is remote from T. V. A. activities.[1] It is also interesting to observe that the total production of electricity in the United States by privately owned electric utilities increased from 82,079,000,000 kilowatt-hours in 1934 to 104,090,000,000 kilowatt-hours in 1938, or 26.8 percent.[2] This was more than the increase on the Alabama power system.

The Pope memorandum minimizes the utility industry as a market for coal and quotes from table 4 of the memorandum, which expresses the tonnage of coal consumed in the utility industry as a percent of the total coal produced. It appears that the total tonnage figures include the coal produced in captive mines. By including captive-mine tonnage, the percent figures are distorted, because captive-mine tonnage has no relation to coal used in the utility industry. Nor does the Pope memorandum meet the issue of the future. The coal industry is vitally concerned with its existing market of coal to the utility industry and with the progressive development of that market. Were it not for the Federal water-power program, there would be an enormous increase in the consumption of coal in the utility industry in the four States during the coming years, as the hydro developments of the industry are substantially completed, and steam plants would be required to supply the growing power needs of the territory. If the coal industry is to be deprived of this opportunity, one of its most important outlets for coal will have been taken away.

Reference is made to the statement in the Pope memorandum that between 1925 and 1929 Alabama Power Co. completed four hydroelectric plants with a total installed capacity of 324,000 kilowatts and only one steam station, of 60,000 kilowatts capacity. In the first place, the facts are not correct. There were only three hydroelectric plants completed between 1925 and 1929 on the Alabama Power Co. system with a total installed capacity of 231,000 kilowatts. These were:

	Kilowatts
Martin Dam (completed 1927)	99,000
Upper Tallassee (completed 1928)	32,000
Jordan Dam (completed 1929)	100,000
Total	231,000

No mention was made of the fact that today Alabama Power Co. has a total of 414,500 kilowatts installed capacity of hydroelectric plants, and 164,000 kilowatts of steam-plant capacity. Nor does the Pope memorandum bring out that "installed capacity" in a hydroelectric plant is not synonymous with firm capacity when used in a utility load, the latter depending upon the vagaries of stream flow; whereas the installed capacity of a steam plant, after allowance for spare capacity, is generally equal to the installed capacity. Moreover, the Pope memorandum does not bring out that the best hydroelectric sites in Alabama have been already developed, so that future capacity added to the Alabama Power Co. system would probably be steam capacity, provided there were no further loss of markets to T. V. A.

It is pointed out that with the acquisition of the T. E. P. system and after purchase of North Alabama and North Mississippi, the T. V. A. will have acquired a market for substantially all its firm power, that further growth outside the T. V. A. area will have to be met by private generating plants, and that coal may be expected to share in the growing power needs.

[1] Figures above from Supplements to Electrical World, May 7, 1938, and May 6, 1939.
[2] Data on United States total production of electricity from Electric Power Statistics, 1938, Federal Power Commission.

Inherent in the development of water-power sites there is required the installation of generator capacity greatly in excess of firm capacity requirements. This surplus generating capacity is capable of producing large quantities of so-called secondary or dump energy, which because of its variable and unpredictable availability can find a market only as replacement of steam generation in utility systems.

In 1940 the T. V. A. is scheduled to complete an installation capable of producing 480,000 kilowatts of firm power at utility load factor. This is less than one-half the firm power in the ultimate development as outlined by T. V. A. in its plan for "The Unified Development of the Tennessee River System," March 1936.

According to testimony of Prof. E. L. Moreland before the Joint Committee investigating the T. V. A., November 1938, the ultimate 11-dam system of the T. V. A. when completed will produce 10,000,000,000 kilowatt-hours per year, as compared with three and one-half billions (according to T. V. A. estimates) required to supply demand for T. V. A. power during the first year following the transfer of the T. E. P. Co. system.

It is apparent that the threat to the coal industry will prevail until the five and two-tenths billion kilowatt-hours of firm power[3] in the ultimate development—over five times the present requirements of the T. E. P. Co. system—is absorbed. Furthermore, there is four and eight-tenths billions kilowatt-hours of secondary energy,[3] only a portion of which is suitable for certain types of chemical industry, and the remainder, because of its intermittent availability, must find an outlet as steam replacement energy in utility plants.

Price of Cottonseed and Cottonseed Products

EXTENSION OF REMARKS

OF

HON. SAM HOBBS

OF ALABAMA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, July 12, 1939

LETTER FROM T. J. KIDD, OF BIRMINGHAM, ALA.

Mr. HOBBS. Mr. Speaker, under the permission granted me by the House, I wish to append a few introductory remarks to the thoughtful and thought-provoking letter from Mr. T. J. Kidd, of Birmingham, Ala., a friend with whom I have had the pleasure of working for several years in the interest of the farmers of the United States.

In the summer of 1937 the price of cottonseed was less than half the cost of picking and ginning the cotton. This tragically low price was so disastrous as to have been one of the potent causes of the recession in national business. I inaugurated then the movement to strengthen the market for cottonseed, enlisting the aid of the entire Alabama delegation in the Congress and of the delegations from all the other States of the Cotton Belt, as well as the Governors and commissioners of agriculture of those States. I came to Washington, and in collaboration with Col. C. C. Hanson, the secretary of the Association of Southern Commissioners of Agriculture, and other friends, finally succeeded in getting the Federal Surplus Commodities Corporation to go into the market and buy cottonseed oil for distribution as shortening to those on relief. But this purchasing was not begun until November 12, by which time the cottonseed was out of the hands of the farmers, so that the producers did not receive any benefit from the strengthening of the market which ensued. However, the principle was approved as sound, after full investigation. This is said not in any sense as a criticism of the Federal Surplus Commodities Corporation. The entire staff of that organization was extremely sympathetic and cooperative. The necessary preliminary research probably made it impossible for them to act more quickly. I am exceedingly grateful to the entire personnel of this great organization, particularly to Mr. J. W. Tapp, at that time Assistant Administrator of the Agricultural Adjustment Administration.

This year the outlook is even worse than it was in 1937, and with the lard carry-over and the flood of surplus lard in immediate prospect, it is certain that the prices of other fats and oils will be disastrously affected by the low price of lard which is inevitable unless some remedial measures are undertaken at once. This is a national problem—its threat is not limited to any one region.

Therefore, the letter of Mr. Kidd is both timely and statesmanlike. It is my pleasure to call the attention of every reader of this extension to this letter and to request the aid of all who agree that the challenge of Mr. Kidd's letter should be answered in the way he advocates.

FARMERS & GINNERS COTTON OIL CO.,
Birmingham, Ala., July 11, 1939.

The Honorable SAM HOBBS,
House of Representatives, Washington, D. C.

MY DEAR CONGRESSMAN: The Alabama cotton farmers in their most poignant distress have never looked to you in vain for help. It is, in recognition of your unflagging efforts in their behalf therefore I am writing to direct your particular attention to the conditions which prevail in the sale of what is, in truth, the sole cash crop remaining to our southern planters.

As you know, only too well, our cotton crop is virtually mortgaged before it is harvested, the cottonseed itself remaining today the sole unpledged product of our soil and our toil. Sometimes I am constrained to believe with our present development in chemurgy, that the day is not far distant when our planters will sell our cotton solely on the basis of its chemical content, that when that day comes the staple will itself be the byproduct of the crop, while the cottonseed with its content of oil, and complement of feed will become the primary cash crop of our great southland.

It is because of these facts, which bear so heavily upon us, that I am writing you this letter. In so doing, I want particularly to direct your attention to the pitiable and distressing condition which today besets us in the sale of that one sole remaining unpledged commodity.

Remember, Congressman HOBBS, that the price of cottonseed oil is ever, and has always been, directly proportionate to the price of the hog lard produced in the great north country and the Mississippi Valley Corn Belt States. Furthermore, that the present decline in the value of our cottonseed oil is not, nor has it ever been, due to a question of the oversupply of that commodity, but, rather, it is the inevitable result of an oversupply of hog lard.

That, and that fact alone, is the causation of the present distress shortly to be reflected on every hand in our national and domestic agricultural oils and fats industry.

Every sign points to the fact that price conditions are sure to become worse before any hope can be had for betterment. In corroboration of that statement let me quote from the Washington Post of today, July 11, 1939:

COTTONSEED OIL

"Cottonseed-oil futures toppled to 5½-year low levels today when liquidation ran into only small buying on recessions. Final prices were off 6 to 20 points on sales of 267 contracts.

"Effects of lower hog and lard quotations offset steadiness of cottonseed oil.

"July closed 6.25 bid, September 6.29 bid, October 6.33 bid, December 6.41 bid, January 6.44 bid.

"Crude oil was quoted at 5¼ cents nominal in the Southwest and Valley, and 5⅛ cents nominal in Texas."

That you may the more closely sense the economic distress present on the American farm side today, largely due to the constant decline in the price of these agricultural commodities, I am appending hereto an excerpt from a report by the United States Department of Labor illustrative of the average yearly price for the past few years on several of the domestically produced agricultural oils and fats:

"The downward trend in fats and oils prices, which obtained in the latter part of 1937 continued, with some fluctuations, in 1938. Average annual prices in the latter year were substantially lower than in 1937."

The following tables illustrate the average yearly prices for the past few years on several leading fats and oils.

[Per pound]

Year	Cottonseed oil	Coconut oil	Soybean oil	Peanut oil	Margarine	Lard	Butter	Tallow, edible	Tallow, packers' prime	Oleo oil
1935	$0.104	$0.047	$0.096	$0.096	$0.151	$0.145	$0.296	$0.086	$0.070	$0.123
1936	.098	.053	.089	.088	.153	.115	.330	.079	.066	.105
1937	.092	.063	.098	.086	.156	.117	.343	.086	.082	.124
1938	.079	.034	.069	.071	.146	.086	.278	.061	.056	.087

Authority, Bureau of Labor Statistics.

With "hog lard" retailing in the chain groceries of the District of Columbia at 2 pounds for 15 cents, the market has now reached the lowest point in the history of the last 72 years. The future is no brighter.

With an increase of 15 percent in the pig census over the previous year's production, with a much heavier weight of marketed hogs, the lard production in the United States for the year 1938 attained a total production of 1,162,000,000 pounds, or an

[3] From testimony of Prof. E. L. Moreland before the Joint Committee Investigating the T. V. A., November 1938.

increase of 166,000,000 pounds of lard over the production of the year 1937.

It is self-evident that this carry-over, as well as the attending constantly increased production, will continue to cause an ever-increasing distress to the American producers of agricultural oils and fats. That fact is made even more evident when one considers that the lard stocks of December 31, 1938, as shown by the Census Bureau at 109,000,000 pounds, represented a 95-percent increase over the 1937 stocks of 56,000,000 pounds.

Mr. Congressman, it is because of the foregoing that I am addressing this letter to you. I am doing so, however, not only in the interest of the cotton and the peanut planter of the South, but in the interest of every sheep, hog, and cattle raiser in the country whose agricultural production of oils and fats are used not alone as food products but also in the manufacture of soap, paint, varnishes, linoleum, lubricants, medicines, and miscellaneous industrial uses.

Every American producer of cotton, corn, soybeans, peanuts, lard, butter, milk, fish oils, and tallows are subject to even further depletion of their income this year by virtue of the present stocks, anticipated crop, and the present low and distressing price of "hog lard."

In a recent address, Mr. E. C. Lund, of the Bureau of Foreign and Domestic Commerce, United States Department of Commerce, on May 10, 1939, declared:

"World production of cottonseed has grown from an annual prewar average of about 11,000,000 tons to nearly 19,000,000 tons in the 1937-38 season, the latter including the record eight and one-half million tons produced in the United States.

"Lard was our principal cooking fat up to the time of the World War. The necessity of shipping vast quantities to our foreign allies greatly diminished the supply available for domestic consumption, and competitive shortenings gained a foothold, which they have held even after it became possible to get lard. The low lard production since 1934 was directly responsible for the greatly increased output of vegetable shortenings, which commencing in 1935, has exceeded federally inspected lard production, and in two of those years exceeded the total estimated lard production, including the farm and local slaughter, of the United States.

"* * * For many years we have been net importers of very large quantities of those fats and oils used in soap, paints, varnishes, linoleums, lubricants, medicines, etc. Prior to 1935 the United States was a substantial net exporter of those fats and oils used principally for edible purposes.

"Imports of 1938 decreased from the high levels of the preceding 3 years, principally because we produced more cottonseed, soybean, corn, and peanut oil; also more lard, butter, and tallow.

"This increased production, plus the heavier inventories entering 1938, met with a lower price level on all products in this group compared with the higher values of the preceding 3 years.

"At the present time we (the United States) are on our normal surplus basis on edible fats and oils, and in fact are faced with a lard production this year equal to that of years when exports were two or three times our probable shipments abroad in the present year. * * * Our domestic production of edible animal and vegetable fats and oils in 1938 is estimated at nearly six and one-half billion pounds. * * *

"Lard production this year will have increased more than 300,000,000 pounds over 1938, more than offsetting the expected decrease in cottonseed-oil supplies.

"Some increase also is probable in butter, soybean, corn, and peanut oils, so that the total supplies of domestic edible oils and fats should be about the same as last year.

"If crop production is about the average this year and next, it may be that the total domestic production of fats and oils in 1940 will be the largest on record."

Thus spoke America's foremost authority on the marketing of fats and oils. Let us now look behind the statement of that eminent authority and see the factual basis for that dire prediction as to this year's production.

The Bureau of the Census reports that as of December 31, 1938, factory and warehouse stocks of all fats and oils (including the oil equivalent of oilseeds) amounted to 3,118,000,000 pounds, an increase of 160,000,000 pounds, or 5 percent, over the stocks at the 1937 year end, and 26 percent more than the December 31, 1936, inventory.

Factory and warehouse stocks, Dec. 31, 1938

[In thousands of pounds]

Product	1936	1937	1938
Vegetable oils	1,062,101	1,449,572	1,524,653
Fish oils	216,156	200,614	256,352
Animal fats	402,244	262,696	312,725
Greases	60,731	74,913	61,276
Other products	213,168	261,014	312,403
Oilseeds (reduced to oil)	525,363	708,964	650,723
Total	2,479,763	2,957,773	3,118,132

Authority: Fats and Oil Trade of the United States in 1938, U. S. Department of Commerce, Bureau of Foreign and Domestic Commerce.

Affecting as it does practically every agricultural producer in the United States the whole of America's agricultural farm side is vitally interested in this matter.

The tremendous importance of the price of these products to American agriculture is made more evident when we consider the fact that the oils and fats industry, inclusive of agricultural, marine animal, and fish oils, constitute the tenth most important industry in our national economy.

Following is a selected list of the most important of the agricultural oils and fats which go to make up the annual domestic production:

	Pounds
Butter (maximum average crop)	2,200,000,000
Lard, including farm production	1,500,000,000
Cottonseed oil	1,500,000,000
Tallow and grease	800,000,000
Soybean oil	225,000,000
Peanut oil	75,000,000
Linseed oil (domestically produced)	27,750,000
Fish and marine animals oils	300,000,000

It has been conservatively estimated that the decline in income from the sale of these products suffered by the farmers in the last 4 years are already in excess of $200,000,000, and, furthermore, that on cottonseed oil alone the losses which will be suffered this year, based on 1935 prices, will amount to a sum approximating all the benefit payments made by this Congress to all cotton farmers on this year's cotton crop.

Surely, Mr. Congressman, your colleagues in the Congress of the United States will see that something is done, and done at once to insure this industry from impending destruction and ruin.

I feel it totally unnecessary to enter into any discussion whatever of the facts concerning the matter of imports, to elaborate upon tremendous stocks of oils and fats on hand today in our country, nor to enlarge upon the decline of our normal exports of these products.

I would, however, take this opportunity of advising you, sir, that we have not alone the greatest carry-over of hog lard in our history, but that we now have "on the hoof and wrapped up in hides" the greatest crop of hog lard going into production that our country has ever faced. As a result of this, already lard prices have dropped to a point where lard, a food which built the brain and brawn of our people, is now being fed into the soap kettles of this Nation.

Therefore, I am writing to ask if you would not be good enough to undertake the task of taking up with the appropriate Federal governmental agency a proposal that:

Inasmuch as our exports of hog lard have annually shrunk by approximately 500,000,000 pounds—

(A) The Federal Government proceed at once to acquire by direct purchase 500,000,000 pounds of natural hog lard.

(B) That the Federal Government hold the same off the market until such time as it can be disposed of in export trade and in world markets historically enjoyed by our American producers.

(C) That the Federal Government proceed to dispose of the same in much the manner that it disposed of the 700,000 bales of cotton, taking in exchange critical and strategic materials, such as rubber, tin, nickel, chromium manganese, and other critical and strategic material, of which we have a national deficiency.

Believe me, sir, when I say that in this manner and in this way only can you even hope to save our domestic producers of agricultural oils and fats from one of the most distressing price situations which has yet confronted our agricultural economy.

Believe me further when I say that unless that be done that the losses now being made by the producers of America's agricultural oils and fats will be reflected manyfold in the national income for this coming year.

It is because of all of the above that I urge upon you, in behalf of the Nation's welfare that you address your every thought, talent, and power to achieving the purpose outlined.

Confident as I am that you will not fail us at this momentous time, and in this undertaking; with every appreciation of your every past help, believe me,

Very truly yours,

T. J. KIDD,
President, Farmers & Ginners Cotton Oil Co.

Farm Prices—Then and Now

EXTENSION OF REMARKS
OF
HON. GEORGE W. GILLIE
OF INDIANA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, July 12, 1939

EDITORIAL FROM THE STEUBEN REPUBLICAN, ANGOLA, IND.

Mr. GILLIE. Mr. Speaker, after 6 years of costly experimentation by the New Deal, with nothing constructive to show for it, the farmers of my district are beginning to entertain serious doubts about the farm policy of the present administration. In the light of this ever-growing sentiment,

I wish to insert here an illuminating article and table on comparative farm prices under Republican and New Deal administrations, taken from the Steuben Republican, of Angola, Ind., one of the outstanding weekly newspapers in northeastern Indiana. This paper is published by Raymond E. Willis, Republican candidate for Senator in 1938, and the most likely nominee for 1940.

[From the Steuben Republican of June 28, 1939]

SURE, WHY NOT?

When the economic fallacies of the New Deal farm policy are pointed out, the New Dealers, unable to make logical refutation, attempt to hide their confusion by crying: "Do you want to return to conditions which existed before the policy was inaugurated?"

But even this question-begging device affords the New Dealers no comfort. For the statistical record, compiled by New Deal agencies, bears out the farmers when they unhesitatingly answer "Yes."

The Bureau of Agricultural Economics reports that the average annual gross farm income for 1933–38 was $8,278,000,000, exclusive of Government subsidies, compared with $10,223,000,000 for the previous 6-year period.

Add to the gross income for the last 6 years the $2,287,000,000 the farmers received in subsidies, and the annual average is $8,659,000,000, or $1,564,000,000 a year less than in the preceding 6-year period.

As to actual farm prices, the story is told by the following table of averages for leading farm products during the Republican period 1921–32 and during the New Deal period 1933–37.

Commodity	Unit	Average price, Republican period, 1921–32	Average price, New Deal period, 1933–37	Percent change
Wheat	Bushel	$1.017	$0.855	−16.2
Corn	Bushel	.724	.693	−4.3
Oats	Bushel	.386	.363	−6.0
Barley	Bushel	.543	.548	+.9
Rye	Bushel	.737	.603	−18.2
Cotton	Pound	.167	.109	−34.7
Butterfat	Pound	.381	.273	−28.3
Chickens	Pound	.192	.133	−30.7
Eggs	Dozen	.281	.205	−27.0
Beef cattle	Hundredweight	6.43	5.33	−17.1
Veal calves	Hundredweight	8.93	6.48	−27.4
Lambs	Hundredweight	9.65	6.75	−30.1
Hogs	Hundredweight	8.31	6.99	−15.9
Potatoes	Bushel	1.01	.743	−26.9
Wool	Pound	.297	.243	−21.2

P. W. A. Primes Many Pumps—Industries of Eighteen States Benefited by $30,000 Swimming Pool Project at Holstein, Iowa

EXTENSION OF REMARKS

OF

HON. VINCENT F. HARRINGTON

OF IOWA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, July 12, 1939

LETTER FROM WALTER E. BUELL, OF SIOUX CITY, IOWA

Mr. HARRINGTON. Mr. Speaker, under leave to extend my remarks, I include herein a letter written to the Public Works Administration by Mr. Walter E. Buell, an engineer of Sioux City, Iowa. Mr. Buell was the contractor on a $30,000 swimming-pool project at Holstein, Iowa, made possible by a $13,000 P. W. A. grant. After the job was completed, he analyzed the sources of the materials used and found that industries of 18 States had benefited from this little project. But that is not all. He points out that the swimming pool contributes to the improved physical and moral health of the community, and concludes that this modern and wholesome improvement in a small town like Holstein would have been impossible without the assistance of the Public Works set-up.

BUELL & WINTER ENGINEERING CO.,
Sioux City, Iowa, July 3, 1939.

Docket: Ia.–1658–F, swimming pool, Holstein, Iowa.

PUBLIC WORKS ADMINISTRATION,
Washington, D. C.

GENTLEMEN: The above project is all completed at a cost of less than $30,000, of which the Public Works Administration paid about $13,000 as a grant. In going over this project it was interesting to note that 18 different States furnished equipment and materials for this small project. We thought possibly you might be interested in having such a list, which is as follows:

Cement, Iowa.
Sand and gravel, Iowa.
Steel, Illinois.
Steel windows and doors, Michigan.
Filter equipment, Indiana.
Baskets, Texas.
Copper, Montana.
Chlorine equipment, New York and Illinois.
Glass, Pennsylvania.
Paint, Ohio.
Floodlights and other electrical equipment, New York and Illinois.
Valves, Minnesota and Iowa.
Cast-iron pipe, Alabama.
Asbestos shingles, Wisconsin.
Diving boards and equipment, Indiana.
Lead and jute, Missouri.
Plumbing fixtures, Tennessee and New Jersey.
Lumber, Washington, Oregon, and California.
Brick and tile, Iowa.
Sewer pipe, Iowa.
Hot-water heater, Iowa.
Fencing, Illinois.

This project was dedicated yesterday, and the writer attended this dedication.

Holstein is a prosperous Iowa town of 1,300 people. During the entire day there was anywhere from 200 to 350 bathers in the pool at the same time, and at least 90 percent of these were young people between the ages of 5 and 25 years. The majority were probably of an age from 10 to 17. Grouped around the outside of the pool there were from 300 to 1,200 people all day. The entire town of Holstein and the surrounding territory had turned out to dedicate this improvement.

Without the P. W. A. aid it would not have been possible to finance an improvement of this kind in Holstein. The pool is strictly modern and sanitary in every respect, and without doubt will have a good, wholesome influence in keeping the young people of Holstein and the surrounding country occupied with good, clean fun during the vacation period of every year. This will reflect in better citizenship on the part of these young people, and the Public Works Administration are to be congratulated upon having had such an important part in the building of this fine improvement.

Yours very truly,

BUELL & WINTER ENGINEERING CO.,
By WALTER E. BUELL.

Private Utility Expenditures, Valuations, and Rates

EXTENSION OF REMARKS

OF

HON. WALTER M. PIERCE

OF OREGON

IN THE HOUSE OF REPRESENTATIVES

Wednesday, July 12, 1939

Mr. PIERCE of Oregon. Mr. Speaker, on page 5660 of the CONGRESSIONAL RECORD of May 17, my esteemed friend, the gentleman from Michigan, offered two tables covering the financial construction record of the electric-utility industry. Based on this tabular presentation, conclusions were drawn which appear to me to be misleading and inaccurate. I believe it may be advantageous to a clearer understanding of the power situation to offer another interpretation of the figures and facts he presented. This I now propose to do and to supplement the discussion by additional collateral information. My endeavor is to present something constructive, as I realize that this debate on the method of furnishing electric power to the public will continue for some time.

I have great admiration and respect for the sincerity of the gentleman from Michigan, but the footnote appended to his tables shows that the source of this information was the Power Trust, from whose periodical organ he quoted. The leaders of this private-utility industry have grossly deceived and wronged the American people. Their methods have been exposed time after time. Shortly after the Federal Trade Commission investigation was started the leaders of the electric industry promised the American people that they would desist from antisocial tactics. This promise has not been kept. The dishonest tactics are being continued and are now in process of acceleration, looking

toward a repetition of the great period of manipulation which began about 1920 and terminated in 1932.

The gentleman from Michigan, in interpreting these Power Trust tables, failed to consider the history of the industry, and what took place during each epoch of the development period. He failed to relate expenditures with consumer growth. If he had made this comparison the reason for the drop in construction expenditures would have been evident.

Prosperity cannot be restored by false and deceptive propaganda. It is not a question of prosperity versus backdoor socialism. All that is involved is the principle of giving the people a fair deal and differentiating between what constitutes manipulation and what constitutes sound operation.

It seems to me the gentleman from Michigan is entirely wrong in his inference that one company overstepped and the entire industry is being penalized. What happened in the Insull companies happened in every State. Passing on to the people benefits from the use of resources belonging to the people or from privileges granted by them, and requiring the private utility companies to live within the law is not a penalty.

Public confidence in private utility management has been badly shaken. It is not due to Government action but to enormous losses, heavy overcharges, and antisocial methods. Prosperity in this industry cannot be restored until public confidence in private utilities is restored. Public confidence can be restored if the industry will apply the principles governing constructive operation and rate-making, stay within the law, get out of politics, desist from corrupting, antisocial tactics, and free the industry from the clutches of the financial manipulator and overlord who has no interest in decent management and good service.

At the outset I wish to make a general observation. In checking the tables on page 5660 of the RECORD, I find a 6-percent difference in the new construction tables for the period from 1923 to 1932, as given by the gentleman from Michigan, and similar figures given on page a32 of the 1938 edition of Moody's Manual. So slight a difference is to be expected and is of no great consequence. The electric companies are also engaged in the gas and transportation business. The submitted unscrambled statistical data from this triple business differs from time to time. It is impossible under these conditions to expect exact statistical reconciliation. However, long ago in my studies, I gave up the idea that exact internal statistical agreement can be reached with figures presented by this industry. Happily there is a twilight zone of differences and if we stay within this zone, we are on safe ground. My personal experience has been, as I have previously pointed out, that a difference of 6 percent or less in rates, bills, or charges cannot be detected by the public. It takes a 10-percent or greater difference to be felt. Therefore, a 10-percent difference—5 percent either way from a mean—can be considered as the twilight zone, and figures falling within this zone can be considered accurate for the purposes at hand. This general statement applies both to the data I have presented and will hereafter present and to the tables inserted by our esteemed colleague. If there was only a 6- to 10-percent difference in results, there would be no power problem. However, differences in the order of 50 to 100 percent create a problem of substantial proportions.

HISTORY OF ELECTRICAL INDUSTRY

This industry had its genesis in 1882 with Edison's perfection of the incandescent lamp and the construction of the initial generating station on Pearl Street, in New York City, From 1882 to 1902, the year of the first United States census of the industry, the growth was slow, as this was the period of transition both in technical development and the habits of people who reluctantly accept new inventions which add to living costs. During these times electricity was scarce and sold from 15 to 20 cents per kilowatt-hour. Alternating current, the technical instrumentality of the modern development, came with Tesla's perfection of the induction motor from 1888 to 1890.

Water power was first converted into electricity in 1882 at Appleton, Wis. The first transmission of such electricity followed in 1889, when power was transmitted from Oregon City 13 miles into Portland, Oreg. This notable semicentennial anniversary has just been celebrated in Oregon. I recall seeing the first transmission line. Up to 1902 the development of this industry was along purely local lines. The people who then owned and managed the properties were in daily contact with their customer friends and associates. During this period I developed the Grande Ronde Electric Co. This company had 100 miles of high-voltage transmission serving about 15,000 people. This was the period of good feeling, and also an epoch of competition between gas and electricity, and competition in a number of cases between two electric companies serving the same area. The holding company was practically nonexistent.

The next 12 years, the period before the World War, might be called the steam-turbine age. This was a period of great and beneficial technical development. Urban centers started to grow rapidly creating the urge for a profitable electric service. Holding companies came into being in this era as a result of apparent profits. The object of the holding companies was to absorb the big profits of the operating companies, also to make it possible to control large investments with a few dollars. The combination of local companies to erase competition then followed. At first these consolidations resulted in lowering costs. Profits then became attractive and mounted with expansion. As a result of such an evolution, competition could no longer be counted upon to control prices. The regulatory control in this era rested with the municipalities. Such control was ineffective. It was charged, and shown in the investigations which followed, that such control led to corruption and a total disregard of the people's rights.

In 1902 Mayor Seth Low of New York City raised the issue of monopolistic control. Out of this issue came a public demand for the 1905 utility investigation, conducted by Charles E. Hughes. The Hughes investigation reported: "A gross abuse of legal privileges, overcapitalization, and the manipulation of securities for the purpose of uniform control, eliminating all possible competition." State regulatory control was the natural result of the Hughes investigation. The first State commissions having jurisdiction over the electric properties came in 1906 and 1907. This control later proved to be just as ineffectual as the former municipal control, and subject to the same abuses. It is futile to hark back to this era of corrupt control of State commissions, but those who knew how easy it was constantly advocate a return to that system.

In order to hold monopolistic control, these great financial interests sought out and secured all the favorable and easily accessible water-power sites. These interests also petitioned Congress to enact special dam legislation, giving perpetual vested rights to the power companies. The inevitable abuses were early foreseen by Charles E. Hughes and Theodore Roosevelt. This trend toward taking the people's resources was stopped by the memorable veto messages of Presidents Theodore Roosevelt and William H. Taft in the period 1908 to 1913. These messages, together with the pronouncements of Gov. Charles E. Hughes, in New York State, started the evolution of the principles and policies needed to protect our people from the evils of monopoly and to retain the people's resources in their own possession. The gentleman from Michigan, who sits on the other side of the aisle, should ponder the principles announced by the leaders of his party during that period. He will then realize how far afield in law and fact the Power Trust has strayed.

From 1914 to 1920 the interest of the American people was centered on the World War and its immediate problems. The utility question was secondary, but the leaders of the industry were preparing for the "great racket." In evaluating the good and evil of this industry, this preparatory period should not be ignored.

The era from 1920 to 1932 should be called the era of the "great racket." Theoretically, this era ended in 1929, but was carried over until 1932 by the forced completion of the

program of President Hoover. This program grew out of the memorable Washington Conference in December 1929 between the President and the leaders of the industry. The years from 1932 to date constitute the readjustment period. Properly to survey this situation, and to determine facts, it will be necessary to detail the happenings in the last two decades. When this is done the mistaken conclusions of my colleague will be apparent.

THE PERIOD OF THE "GREAT RACKET"

The "great racket" started in 1920 with a publicity campaign to influence public opinion. This well-managed and far-reaching campaign was controlled and supervised by the National Electric Light Association. Every available avenue was utilized to spread misrepresentation and propaganda. Millions upon millions of the rate payers' funds were used in this effort. This campaign was started with the statement of the director of the National Electric Light Association: "Don't be afraid of expense; the public pays the expense."

National trends now favored an outstanding growth for this new industry. The concentration of urban population had been accelerated, due to the World War. This condition permitted high density, with easy concentration of facility resources and control. During the previous epoch national wealth had increased nearly fourfold. The automobile had been developed into a practical and low-cost instrument of transportation, adding multiple sources of electric consumption. The radio and the refrigerator were being marketed, adding the desirable characteristic of long-hour use to the load curve.

Merchandising of energy-consuming devices was initiated. Every trend stimulated new electric-facility construction. However, this stimulus also created an accompanying destructive influence. Holding companies competed with each other in the purchase of operating companies at any price, knowing that with their propaganda machine working, the excess costs could be saddled on the public in flimsy securities and the supporting high monthly tolls. To overcome the handicaps of the closed mortgage, and to facilitate free control by a few, financing was partly accomplished through the sale of customer-ownership securities, and pyramiding one holding company on another. The investment bankers and local banks joined with the manipulators, and placed in the hands of innocent, trusting purchasers millions of dollars of questionable issues.

Such a propaganda machine, coupled with pegged finance, and a release of security sales-resistance following the Liberty Loan drives, created a national speculative craving. The ease of selling securities fostered and encouraged manipulation. If it had been more difficult to sell securities in these times, and the State regulatory bodies had called public attention to the situation, the industry today would be in a far better condition. Commissions earned on securities sales also tempted investment bankers and company employees to create further deceptive propaganda. Employees were forced to sell securities. Holding company after holding company appeared in Wall Street and La Salle Street. When the chain of these holding companies became too numerous, investment and security companies were organized and superimposed on the top holding company. The base of this artificial pyramid was the operating company. This company provided the only source of revenue, and was the only owner of physical property. The cruel farce which victimized so many of our people was created on the myth of future enhanced equities.

The attending danger was early foreseen by wise men within and without the industry. In 1927 Senator Walsh, of Montana, introduced his resolution for the Federal Trade Commission investigation. The leaders of the private power industry fought this resolution with every resource at their command and spent well over a million dollars of the ratepayers' money in this one fight. The private electric leaders testified before the Senate committee. They stated that the resolution was not necessary, as State regulation was so successful that dishonesty, misconduct, and evils were impossible. They ignored the fact that State regulation could not reach the holding companies. One who reads these Senate hearings and compares the statements with the recent pronouncements of the utility barons realizes that we are getting ready for a repetition in utter defiance of Federal regulation.

HOLDING COMPANY PYRAMIDING

The holding company pyramid was an artifice created to provide control by a few men, with a small or no actual cash investment. The needed cash was siphoned from the public through the sale of bogus securities and the maintenance of high rate levels. Generally, up to 1928 the operating companies were financed largely by bonds. In some cases bonds totaled 75 percent of the outstanding securities. The average for the operating company was about 30 percent common stock, 15 percent preferred stock, and 55 percent bonds.

The promoter was able to secure voting control of, say, 20 percent of the common stock by organizing a holding company. This common stock of the operating company was sold to the holding company. This company then issued and sold notes, debentures, and preferred stock. The funds secured from these sales paid, in a large measure, for the common stock of the operating company. The procedure was then repeated. Additional holding companies were organized and further security sales made to the public. For example, I have on several occasions cited the fact that Mr. Harrison Williams, with a one and a half million dollars cash outlay, made over $27,000,000 in cash for securities sold after the crash, and secured stock control of utilities with an asset value around one thousand million dollars. Mr. Williams still controls most of these properties, owing a debt of gratitude therefor to the Federal S. E. C. The investors, very naturally, feel strong resentment toward the S. E. C.

Such holding companies, investment trusts, security companies, and subholding companies created an enormous quantity of securities. Such offerings required monumental sums for yearly fixed charges.

An examination of the annual statements of a series of top holding companies in Moody's Manual shows a "compounding earning effect" between the earnings of the operating company and the earnings of the top holding company. This examination indicates that for every 1-percent change in the earnings of the operating company, the top holding company realized a net earning change of about 8 percent. With the poorer holding company this compounding ratio was much greater than 8 to 1. Judge Haley, when in the Federal Trade Commission, cited the consolidated earning statement of 10 holding companies where a drop of 11.7 percent in the gross earnings of the operating companies produced an earning drop of 90 percent in these holding companies. This "compounding earning effect" explains why the operating companies were forced into unsound rate policies, and security values crumpled when the operating companies in the United States encountered the small decrease of 12 percent in their gross earnings from 1930 to the low point of the depression. During this same period industrial production in the United States dropped 50 percent and factory pay rolls were reduced 65 percent.

This comparison shows clearly that, from an earning standpoint, the private operating utilities were better off than most concerns. This favorable condition results from the fact that residential and small-business consumers constitute the backbone of the power market. Yet with such a favorable operating showing and high-class engineering the industry slipped in the eyes of the public because of manipulation and antisocial tactics. Many operating companies were forced into bankruptcy by the demands of their holding-company overlords.

THE WRITE-UPS

In addition to pyramiding, the private power companies resorted to writing upward the assets on their books in order to create a semblance of justification for securities sold to the public and to cover up balance-sheet manipulations.

The Federal Trade Commission uncovered various devious devices to counterfeit values. It also uncovered the fact that these mark-ups were made in most cases without legal, governmental, or regulatory authority. In this investigation the

Federal Trade Commission covered 18 top holding companies, 42 subholding companies, and 91 operating units—a small percentage of the total. This sampling examination revealed write-ups of around $2,000,000,000, if we include the write-ups later reversed by some of the larger holding companies. According to the Electrical World of February 27, 1932, the Electric Bond & Share Co., with operating affiliates in nearly every State of the Union, wrote down their assets $449,100,000. The Niagara-Hudson, Commonwealth & Southern, and the Appalachian Power Co. also later marked down, in whole or in part, assets previously written up. An examination of the balance sheets given in Moody's Manual for these four companies indicates a write-down of $730,600,000.

Such write-ups and write-downs have victimized innocent investors in every section of our country. This examination indicates that the process of write-ups and write-downs has resulted in investment losses from around one and one-half to two billion dollars. The present lack of confidence is clearly due to such holding-company practices. The losses have been spread among small investors of the Nation who had pathetic faith that they would share in earnings resulting from the marvelous growth of the industry. They are now on relief or W. P. A., and it is indeed surprising that they do not more openly show resentment against those who so ruthlessly deceived them.

RISE AND FALL OF CONSTRUCTION EXPENDITURES

To understand and interpret the figures submitted by the gentleman from Michigan, it is necessary to analyze earnings, consumption, growth-rate, and saturation divided among each class of consumers. The residential, farm, and small-business consumers contribute 64.8 percent of the industry's revenue, with only 37.1 percent of the total kilowatt-hour use. The wholesale power customers pay 28.2 percent of the revenue and consume 53.8 percent of the kilowatt-hours. From this statement and the fact that the home owners increased their consumption during the depression when industrial activity dropped to low levels, it is obvious that the home owners and the small-business men are the backbone of the business.

The following table shows the growth statistics of the home consumers:

Home and farm electric-consumer data

[Expressed in units of 1,000. Applies to entire continental United States]

	1920	1930	1932	1935	1937
Total population of United States	105,711	122,775	124,680	127,521	129,257
Total number of families	24,273	29,905	30,400	31,034	31,455
Home electric consumers	8,100	20,530	19,850	21,235	22,939
Percent of total families served	33.4	68.5	65.3	68.0	72.7
Total dwellings (estimated)[1]	21,400	25,205	25,450	26,000	26,300
Percent of dwellings served	37.8	81.5	78.0	81.5	87.2

[1] Moody estimates (pp. a10—1938 edition) that over 86 percent of nonfarm families are served and 19.8 percent of the farm families. The above table (composite of both classes) shows 87.2 percent of all dwellings in the United States served. In 1937, 19.8 percent of farms were served; in 1920, 3 percent were served; in 1930, 10.3 percent; 1932, 11.3 percent; in 1935, 12.6 percent. This table is indicative for the country as a whole and cannot be used as a gage for any particular section.

From this table it is apparent that the largest number of home consumers were connected to the lines between 1920 and 1932. This large number of new consumers required new extensions. Out of seven and eleven one-hundredths billion dollars expenditures by the industry between 1923 and 1932, five and sixty-one one-hundedths billion dollars were used in the construction of transmission lines, distribution systems, and facilities connected with distribution. (See Moody, p. a32, 1938 edition.) In these years population was increasing at the annual rate of 1.62 percent, whereas domestic electric consumers increased at the annual rate of 12.4 percent, or seven and seven-tenths times faster than population growth. This divergence in growth rates gives evidence that a saturation point was being approached. Henceforth distribution extensions will depend largely on population growth, and reaching the small percentage of available unconnected urban prospects and the remaining available rural consumers, who are widely scattered, the thickly populated sections having been reached. The great expansion period is over. The industry cannot spend as it spent before.

From 1920 to 1925 population in the United States increased at the annual rate of 1.73 percent; from 1925 to 1930 the rate was 1.38 percent; and from 1930 to 1935, 0.77 percent. This declining rate has significance for the electric industry, which also feels the tendency toward centralization in cities.

The number of domestic consumers dropped from 1929 to 1932 resulting from families doubling up and disconnecting service during depths of the depression. The 1929 level was again reached, beginning with 1934. From 1934 through 1937 the increase in the number of domestic consumers was at the annual rate of 3 percent. People again had jobs. This reversal largely explains the increase shown in the gentleman's table for 1937 and 1938.

The growth in number of rural consumers from 1920 to 1928 was only 306,000 for the whole United States, and by 1932 this increase was 509,000 as compared with 1920. During these years the policies of the private companies impeded rural growth. However, the advent of the R. E. A. accelerated the number of rural connections, and by 1937 the number had reached 1,241,000 out of the possible three or four million available farms. Threats of public power had forced companies to put on high-pressure campaigns for rural extensions. As a result, customers found themselves hog-tied when a really advantageous opportunity for public development was offered.

The growth statistics of the small-business consumers illuminate a phase of changing business conditions not always realized. From 1920 to 1928 the increase in number of such consumers was 1,830,000. In the latter year the growth curve flattened out and remained practically horizontal until 1935. From 1935 up through 1937, the number increased only from 3,710,000 to 3,890,000. The small-business-growth curve stopped and the sharp upward rise about 1927, indicating that conditions were changing and the brakes were going on early. This situation, compared with population growth, indicates that the small-business man, with his employment possibilities, was being crowded out of the picture as early as 1928.

Wholesale power consumers, chiefly factories, dropped from 368,000 in 1929 to 260,000 at the beginning of 1938, indicating again that the little fellow was being crowded out. These growth statistics, covering the four principal classes of service, together with the station statistics and financial practices which I will hereafter cover, fully explain the drop in expenditures cited by my friend.

The total new business extensions of all classes in the industry from 1922 to 1932 were, in round numbers, 11,700,000 or a 7,000,000 million growth rate for a period of 6 years. In the next 6 years cited by the gentleman from Michigan, this extension increase was 2,500,000, or 35.7 percent of the consumer increase rate, from 1923 to 1932. The new construction average annual expenditures of the industry cited by my colleague during the past 6 years was 39.6 percent of the expenditures of the earlier period. The close agreement of these two percentages definitely ties together cause and effect. The consumer saturation point was being approached. Businessmen do not make extensions unless business is in sight. The business increases from new consumers will be small from here on, and to infer that such expenditures as were encountered in 1923 to 1932 would continue is dangerous reasoning. Such statements are being made to reconstruct falsely or without reasonable foundation a base for practices of frenzied finance which existed in the racket era. The industry cannot again spend at the previous rate for new lines. Future expenditures must be for replacing obsolete equipment. The great expansion period is over; but companies have not amortized and built up reserves. The companies alone are responsible for the fact that they have outstanding debt on dead equipment.

GENERATING PLANTS

The tabular presentation which follows indicates the situation as to installed generating capacity of the private companies in the United States.

Installed generating capacity, private electric utilities of United States

[Expressed in units of 1,000]

	1920	1930	1932	1935	1937
Total installed capacity, kilowatts	12,022	30,285	32,033	31,820	31,958
Percent total hydro capacity [1]	26.3	26.3	26.6	27.2	28.5
Percent total fuel capacity [1]	73.7	73.7	73.4	72.8	71.5
Capacity factor hydro, percent [2]	48.0	42.4	39.9	45.6	48.3
Capacity factor fuel, percent [2]	29.5	29.6	21.3	25.9	33.5
Capacity factor all private plants, percent	34.7	33.2	26.4	31.7	38.8
Millions of kilowatt-hours produced, private utilities	37,716	86,114	74,488	89,330	110,464
Millions of kilowatt-hours produced, all plants	43,334	94,652	82,377	98,464	121,837
Tons of coal used, all plants	42,938	42,910	30,296	34,164	44,766
Barrels of fuel oil used, all plants	10,466	9,263	7,967	11,378	14,143
Millions of cubic feet of natural gas used, all plants	21,861	120,297	107,840	125,239	71,268

[1] Private plants: Utilities, mining, and railroads.
[2] All plants in United States.
The capacity of all Federally owned hydros at the end of 1938 was 1,124,200 kilowatts out of 11,053,063 kilowatts installed in United States or one-ninth of the total. Eight-ninths of the hydros were then, as they are now, owned by private utility companies. Federal capacity was only 3 percent of the total of hydro and fuel capacity.

The conclusions to be drawn from this presentation are:

First. The increase of installed capacity from 1920 to 1932 was at a rapid rate, and additional capacity was not added from 1932 to 1937. Industrial inactivity had reduced capacity factor to 26.6 percent, and no reason then existed for additional capacity.

Second. The private companies have appropriated most of the good accessible hydros, having seven and seven-tenths times as much hydro as the Federal Government.

Third. The capacity factor, which is a term to designate the percentage of the time the investment dollar is working, is low. In 1920 the investment dollar was idle 65.3 percent of the time; in 1930, 66.8 percent; and in 1937, 61.2 percent. Interest, amortization, and depreciation charges continue 100 percent of the time. In the Ontario hydro the investment dollar is idle only 35.2 percent of the time. A high idle time ratio makes high rates, and idle time results from unsound rate forms.

Fourth. Coal use per unit has been materially reduced since 1920 by increasing mechanical efficiency. The salvation of coal-producing regions lies in increasing long-hour use by cheap rates. Instead of banking the fires, keep them going 24 hours a day. This, together with increased use of natural gas, has curtailed coal production. The use of natural gas represents 6.5 percent of the electric production of the private companies.

Nearly three million kilowatts of generating capacity of the private utilities is old and obsolete, having an age over 25 years. This equipment needs replacing and would represent new construction expenditures of at least $300,000,000. Normally this construction should be financed out of retirement reserves and not from new securities, if sound business practices had been followed.

The accumulated retirement reserves of all the private companies in the United States amounts to about 8 percent of the property and plant account. The six best private systems in the United States have in such reserves an average of 18.7 percent of their fixed property, while the total Ontario Public Hydro has 40.5 percent. Public plants protect investments because the speculative feature is absent. If adequate reserves had been set up, instead of making payments to holding companies, this construction could proceed without any outside financing. Here we have a concrete example of the evils of manipulation holding up necessary construction. The operating companies have created this situation by malpractices. This should be corrected, and adequate reserves set up. To urge that Federal Government agencies should make rehabilitation loans to utilities is to make a confession of incompetence as to management. If they could not set up reserves in the expansion period of great profits, they can never operate successfully until holding-company practices are changed.

FAVORS GRANTED A PRIVILEGED CITIZEN

My friend stated, in effect, that, because one company overstepped and did wrong there is no reason why the entire industry should be penalized. Such a statement gives a totally incorrect impression. Investment losses or wrongdoing has been spread by the utility manipulators to every State in the Union. Space does not permit listing all such cases. The printed record of the Federal Trade Commission's investigation, which by no means covered the entire industry, would occupy a sizable bookcase. For the purpose at hand I will cite only a few cases.

Those who have some lingering faith in the processes of democratic governments may find the faith badly shattered after studying the public career and record of Harrison Williams, utility magnate.

The Detroit Edison Co., which services my colleague's district, is controlled in part by the Harrison Williams interests. I have previously pointed out how Mr. Williams kited the securities of his companies by stock-pegging methods to a market price of $680,000,000 with acknowledged stated "written up" assets of only 38 percent of such a market price. Mr. Williams' St. Louis property is now under fire for alleged corrupting tactics and concealed political donations. This situation was exposed by the St. Louis papers a few months ago. The charter of this compay—the Union Electric Co. of Missouri—in one locality is now being attacked in the courts for violation of the State Corrupt Practices Act. How his interests recently flimflammed owners of forty-four and a half millions of preferred stock, in the Middle West States, can be found on page 1793 of the CONGRESSIONAL RECORD of February 22, 1939.

The Williams organizations have been using the Klau-Van-Piertersen-Dunlap propaganda agency of Milwaukee. This agency at the present time is re-creating the well-known utility misrepresentation propaganda of the early twenties. The 95 street-lighting contracts secured by the Williams company within the last 2 years in Illinois strongly suggest irregular methods. If the State capital lobbying practices of his companies were exposed, the people would drive from public life all their elected representatives working with the Williams agents. Illinois and Missouri utility legislative lobbies would shame the worst of the emperors of ancient Rome. There is always an influx of evil forces into each capital. How a former Williams employee engaged in such practices has been planted in one of the Government's regulatory agencies in Washington, having jurisdiction over securities, was cited at length by the Chicago Tribune last March. This same henchman piloted the Williams employees through this department on a security reclassification scheme in the spring of 1937. Later, high-pressure stock salesmen misrepresented facts to the security owners in order to secure sufficient proxies to give this reclassification proposal the requisite authorization, thus defrauding thousands of innocent investors while the company came out with all they wanted. Even Federal regulation generally fails. The only way this matter can be controlled is by public operation of generating plants and the yardstick competition of publicly owned distribution systems.

Here in Washington, D. C., the Williams company, which operates the local electric utility, is guaranteed by the Federal Government a 75-percent stock return, through manipulation, in violation of the Utility Commission Act of 1913 while the needy of the city are being reduced to starvation. The Federal and District Governments are contributing annually $460,000 in excess charges toward this extortionate return. A just utility payment to the District might offset some of the bitterness of the new income tax. Two years ago, on this floor, I fully explained the utility rate and tax situation in the District. Nothing has been done by the District Committee. The Williams record is far from "lily white," as he is pictured by his associates in the utility business. If our democracy is to survive, these practices must be stopped. The responsibility must be fixed and the guilty punished.

Electric consumers in all classes in the State of Michigan are paying in excess charges $47,000,000 annually as compared with rates under the well-known Tacoma system. If the Ontario public rates were in effect in Michigan, the Michigan-rate payers would save annually $51,900,000. The Detroit small-residential user—25 kilowatt-hours per month—pays 59 percent more than his Windsor neighbor when the tax equivalent is added to the Windsor rate. The larger Detroit residential consumer—250 kilowatt-hours per month—pays 79 percent more than he would pay if he lived in Windsor. In Detroit, the composite small-business consumers pay 60 percent more than the like small-business consumers in Windsor, when taxes in both localities are equalized.

VICTIMIZED INVESTORS

The Middle West Co. story, involving nearly one and a half billion dollars of indebtedness for the holding company and its subsidiaries, is well known. Often told, also, is the story of how its security affiliate sold $115,000,000 of notes and stocks to the public when the holding company was insolvent. Middle West Co. security holders lost 93 cents out of every dollar invested, recently recovering the 7 cents on the dollar.

Judge Haley, who conducted the Federal Trade Commission investigations from 1928 to 1935, has pointed out that the market value of the securities of 25 holding companies dropped from $19,250,000,000 in 1929 to $2,250,000,000 in 1935—a drop of $17,000,000,000. Just think of it, 17 times the assessed valuation of all Oregon. This astounding declaration shows how large the losses were to the American people from kiting and pegging manipulations. The millions of losers, and their friends, will never forget, and should never forget nor again trust those who defrauded them. The relief rolls are today full of old people who have had their life's savings taken from them by security pegging operations of holding companies.

The Electric Bond & Share, the Commonwealth & Southern, the Appalachian Power Co., and the Niagara Hudson Co. have written down, within the last few years, their combined assets in the amount of $730,600,000.

I have been able to find that 90 companies with total liabilities of $1,933,000,000 have taken bankruptcy through the 77B route of the Federal bankruptcy law. Forty-one companies, with liabilities of $1,744,000,000 have either defaulted on part of their issues or are offering security readjustment or reclassification plans. Of these 131 companies, 53 are operating units and the balance are holding companies. This summary does not pretend to include all of the private companies in the country.

Cities Service of New York, a $1,250,000,000 holding company, owning over 150 subcompanies, covered the Nation just before the break of '29 with security salesmen and security dealers, handling highly pegged and manipulated securities. This stock was daily sold on the basis of the previous day's pegged market price. After the stock market break, the price of these securities dropped to extremely low levels, with enormous losses. The objective of the security affiliate of Cities Service was to spread the issues as widely as possible to prevent the possibility of dumping. Such a planned objective resulted in effecting the maximum number of victims. In the Cities Service manipulations it was found that purchases were made by the security affiliate to elevate the security market price.

If the gentleman from Michigan would look into the records covering the Standard Gas & Electric, the Associate Gas & Electric, the Utilities Power & Light, the Foshay Interests, and the Peirce Cos., he would find a further record of large, widespread investment losses. One of the manipulators had time for contemplation in a Federal penitentiary where his stay was all too short.

OREGON INVESTORS ALSO VICTIMIZED

It would be absurd for me to relate the doings of Insull and Harrison Williams, those glamorous figures of the utility world, and to omit the story of what a private utility company is doing in Oregon today. Our company is smaller in size but not less adroitly manipulated.

Oregon, at this moment, is having a repetition of a utility-security manipulation which took place a few years ago. The Portland Electric Power Co. is taking bankruptcy after a previous security adjustment not long since. The previous adjustment grew out of the purchase of the Seattle Gas Co., at a ridiculously high price, by the holding company which controlled the Portland operating company, and other transactions of a similar nature.

Oregon papers now report that the company's 25,000 security owners are organizing to protest this last procedure, and will refuse to pay their light bills until their interests are protected. The organizers of this movement allege that the company has earned sufficient sums to pay interest and dividends, but that the earnings have been used for large official salaries and expenses, and corrupt political work.

A few days ago a meeting of Pepco security holders was held at the Marion Hotel in Salem, Oreg. The press reported that this was a pitiful gathering. The average age of those present at this meeting was approximately 65 years. A few years ago these people were considered to be in comfortable financial condition, and well prepared for old age, after a life of labor and self-denial. They had invested their savings in these securities on being assured by the company's soft-tongued salesmen that the company's earnings would provide comfort in their declining years. This was a hopeless, deceived crowd. The market price of their securities was only 2 cents on each purchase dollar. What comfort can these old people receive, when they realize that they must go on relief, and over $100,000 annually of their funds are going to a small, select crew in Portland, profiting from this receivership. They also know that, though being on relief they still must pay light bills to the company which is indebted to them, or have their electric service discontinued. With such irreparable injuries coming to light, how can the power industry expect to have the confidence of the people? Such performances kill the desire of investors to place their savings in electric securities. If the Portland Electric Power Co. had been properly managed, these innocent people would not be suffering today. With proper management, the debt would have been amortized, and the equities and earnings of the so-called investors protected. I understand that no dividends have been paid for years. This bankruptcy has probably been entered into by the company so it may get out from under the burden resulting from its own manipulations. Can such people be trusted to pass along to the public through their distribution systems the benefits of cheap Bonneville power, as the law contemplates?

These practices cause unrest and account for the feeling of insecurity and lack of confidence which pervades our country. The worst part of this story is that it was deliberately planned and conceived through a campaign of misrepresentation. The Salem, Oreg., meeting is typical of what has happened, and is still happening throughout the country. Will we allow continuance of such operations? Will those with savings ever forget past experience and again entrust money to private utilities which are but creatures of absentee holding company owners?

These widespread great public losses have inspired distrust in most electric securities. Before the security sales level of 1923 to 1932, cited by my friend, can be reached, public confidence in the industry must be restored.

HINDRANCES TO PUBLIC POWER

The real hindrance to public power, even the amount necessary for yardstick purposes, is the present manipulation by the same aggregation of plunderers who robbed the American investor of billions of dollars through the sale of pyramided and counterfeit securities.

They, today, no doubt have the upper hand in Oregon politics and are a potent influence in national politics. Through their news disseminations they tell the people that politicians corrupt business, when the reverse is actually the fact. This type of business, with its unlimited resources,

gains the sought objective through corrupting the politicians. It is only the vast accumulations of funds that makes corruption possible.

These plundering manipulators organize local fake tax leagues or protective associations under the guise of rendering a public service whenever their privileges are threatened. Unsuspecting, high-class citizens are enlisted in the movement, and when this backing is secured the field is open for a campaign of misrepresentation. So-called institutional advertising in the press is the next step, and further misinformation is supplied to unsuspecting reporters and run as news items. Canned editorials abound. Paid workers then circulate through the community spreading the final dose of misrepresentation. The people are seldom able to secure the facts, even from State utility commissions supposedly instituted for their protection. If they could secure accurate information, the power question would cease to be a problem. I need only to cite as an example the very recent campaigns in Clark and Yakima Counties in Washington and Hood River County, Oreg. Responsible citizens of Clark County protested to Federal agencies here in Washington, claiming that the Portland electric companies spent over $100,000 in that county last November to defeat a power district election.

Back-door methods are another hindrance. Just recently the city of Spokane renewed a long-term franchise of the Washington Water Power Co. which had some years to run. This was an advance move to prevent the people of Spokane from receiving full benefits from Coulee Dam. As far as I have been able to find out, the renewal was accomplished without requisite publicity. The Washington Water Power Co. is, like the Northwestern, a subsidiary of the Electric Bond & Share. The president of this subsidiary company appeared before a Senate committee recently, urging the curtailment of Bonneville appropriations, and it was evident that the statement presented was prepared by a Washington lobbying agency. The perverted methods of this agency in dealing with the old Federal Power Commission were exposed by Senator Couzens some 9 years ago. Thus the old faces, under a different mask, continue to appear in the role of deception.

A BENEFICIAL COMPARISON—PUBLIC AND PRIVATE POWER

In spite of an approach toward the consumer saturation point, the entire power industry has a bright future if it travels the road of safe, fair, and open operation. To indicate such a direction I will now briefly present an interesting comparison. Throughout this comparison it is well to repeat and remember that the domestic and small-business consumers are the backbone of the industry.

The publicly owned Ontario Hydro started in 1913 serving 14 municipalities. At that time the average domestic rate both in Ontario and the United States was a trifle under 9 cents per kilowatt-hour and the domestic consumption 265 kilowatt-hours per year. By 1923 the United States average rate was 7.4 cents and the consumption 360 kilowatt-hours. At the start, the Hydro cut their rates in two, using the conventional form of rate. After an intensive study, the Hydro next introduced a cheap load building rate form in 1916. This form is still in force. From 1913 to 1923 the average Ontario town trebled its domestic consumption and approached a 2-cent-average rate—nearly one-quarter of the then average United States rate.

From 1923 to 1930 the United States average domestic rate dropped only from 7.3 to 6.3 cents per kilowatt-hour with an increase in annual consumption of 132 per kilowatt-hour per consumer per year. In Ontario, by contrast, the increase was four and five-tenths times as great under an average rate of 1.6 cents, or one-quarter of the then average United States rate. The need for holding company earnings, and the compounding earning demand of the holding companies previously cited, prevented the United States operating companies from adopting such a promotional rate, and benefiting its domestic, rural, and commercial consumers, as well as increasing earnings.

At the end of 1937, the 14 original Ontario municipalities had an average rate of 1.3 cents per kilowatt-hour with a yearly consumption of 1,835 kilowatt-hours. Under this same average rate, Toronto had a consumption of 2,180 kilowatt-hours; Ottawa had a consumption of 4,080 kilowatt-hours under an average rate of less than 1 cent. In 1937, the United States average rate was 4.4 cents and the consumption 780 kilowatt-hours.

During the World War the gross revenue per customer dropped both in the United States and Ontario, and it was about 1921 before the 1913 earning levels were recovered in both countries. Since this date, the gross earnings per customer in the United States have increased 35 percent and in Ontario 100 percent. In Ottawa, with its still lower rates, the revenue per customer was tripled. In no year after the war did the revenue drop from rate reductions. Sound rate reductions increase gross earnings.

From these lowered rates, long-hour use resulted. The public Ontario Hydro is able to work its plant investment dollar 64.8 percent of the time compared with 38.8 percent for the private United States plants. The Hydro has set up reserve funds of 40.5 percent of its property account, whereas the private United States companies have reserves of only about 8 percent.

PLANT COST COMPARISONS

The entire book plant cost of the Ontario Hydro is about $333 per kilowatt of plant installation, whereas the similar figure for the United States private plants is around $565, and if the junk plants were eliminated, this figure would be at least 10 percent higher. In this connection, I have found the average book plant account per kilowatt installed, of the six best private systems in the United States to be $403. Due to the pressure of actual, potential, and possible competition from public plants, the private companies serving these investigated areas have not resorted to frenzied finance, and the property account per kilowatt installed is much lower than the American average. For example, in Cleveland, Ohio, this comparative figure for the private company is $292 and in Washington, D. C., $323, both lower than the Ontario Hydro, showing that it is easy to accomplish this result under comparatively low rates. The Detroit company has a book plant account about the same as Washington, and there is no reason why the Detroit rates should be as high as they are.

There is nothing new in these principles, which I covered diagrammatically on this floor 2 years ago. Steinmetz long ago pointed out this rule. The motor industry was built on this principle, and today has little or no funded debt. Nearly 14 years ago Henry Ford told the world that "the real profits in power generation are to be earned through giving it cheaply," and that "as compared to these profits, the profits of financial juggling are petty."

TAXES

The propaganda agencies of the power trust are overworking the tax displacement question. The taxes paid by the private companies do not represent sacrifices by the owners. These payments are included in all the light bills and are met by every user of current. The electric consumer is the only actual taxpayer connected with the electrical business.

Taxes of every nature paid by the private electric industry in the United States in 1936 amounted to $275,192,350. Thirty-four and a half percent of this amount represents Federal taxes, and the balance is State and local taxes. This national tax bill equals 2.7 mills on every kilowatt-hour sold, and 13.2 percent of the industry's gross earnings. A large part of these taxes rightfully belong to the distribution systems. In Oregon, these representative figures are total taxes of $2,991,479, being 2.78 mills per kilowatt-hour sold and 15.8 percent of the gross earnings.

The power companies in the United States re-collect $83,688,000 from municipalities for street-light current. This street-light current is sold to municipalities for the high

average figure of 3.57 cents per kilowatt-hour. Water pumping and light and power for public buildings are not reported separately by the utilities but are generally combined with the reported figures covering the total commercial light and power revenues. The best evidence available indicates that the revenue from these services is 57 percent of the street-lighting revenue. It then follows that the private companies re-collect $130,000,000 from Government agencies, or 47.4 percent of the total tax bill they pay. This re-collected amount exceeds the total Federal tax bill by 37 percent.

The private plants in the United States contribute only an insignificant amount in the form of cash contributions, payments for privileges, and free service. The total tax payments, cash payments, and free service of all private utilities in the United States amount to 13.2 percent of their total gross revenues.

Public plants make cash contributions to municipal and State governments, principally to municipalities. These contributions go into the general and special funds for uses other than those applicable to the electric business. These contributions reduce the over-all tax collections of the numerous subdivisions of government.

The Federal Power Commission reports that the national tax and net cash contributions of the public plants amount to 17.3 percent of their gross earnings. This is a higher rate than the private plants pay for all kinds of taxes. In addition, the public plants donate to governmental agencies for street lights, pumping current, and service to hospitals and charitable institutions. The private plants do not make such service contributions. This free service has been evaluated by the Federal Power Commission as 8½ percent of the gross earnings of these public plants. Public plants therefore contribute 25.8 percent of their gross revenues to Government, compared to the 13.2 percent of the private companies.

If a number of smaller municipalities were investigated, it would be found that the private utility re-collects a large share of the taxes collected by the municipality. In such cases, they re-collect more than they pay. This is especially marked when the private companies also own the water systems. Conversely, in a comparatively small number of cases, the private companies have large generating plants in thinly populated counties and therefore pay a larger part of the total taxes collected in such localities. Private power uses two sets of values—one for tax purposes and the other for purposes of rate making. The tax valuation is universally low whereas the rate valuation is universally high. When Governor of Oregon I waged an unsuccessful battle to maintain the same valuation for both purposes. I found the power companies so firmly entrenched this could not be done, but I did succeed in raising their assessed valuations many millions of dollars.

When a cooperative or public agency takes over a private plant, there should and can be tax equalization. The public power district should not become a burden to other beneficial, non-revenue-producing governmental operations, neither should the nonrevenue agencies penalize the rate payer by using the public power plant as a source of general revenue.

With lower rates, the public plants of the United States make a 96-percent greater proportionate contribution to government than do the private plants. Under such conditions, obviously no difficulty should exist in equalizing taxes or preventing tax displacement. The most equitable method of electric taxation is to place a fair gross revenue tax on all the current sold. The total amount so collected can be distributed to the governmental agencies according to plant values. Recent remarks of Mr. Franklin T. Griffith of the Portland General Electric Co. before the East Side Club of Portland indicate that he needs to study the 1939 report of the Federal Power Commission, comparing actual taxes paid by private industry and public-power contributions. The tax problem is a bogey created by private-power propaganda. This propaganda is continuously being worked to keep the people from securing the benefits of low-priced electricity. Such benefits can be secured without injury to any interest. It is good business for private power to provide such benefits.

THE PATH TO VICTORY

Under such a heading an editorial appeared in the Electrical World of May 20, 1939. Mixed with the desire for a private-utility victory, and the defeat of those who have fought the people's battles, the editorial gave some unpretentious advice to the leaders of the industry. This advice was of a general nature. It can stand repetition but needs detailed explanation and definite pointers. These leaders were told (1) to stay clear of politics, (2) place all the cards on the table for the people to see, (3) keep the record clear, and (4) correct the weak spots in the system. So much, so good, but not enough. Staying clear of politics should mean to stop using the rate-payers' money for political contributions, political work, and pay-offs. When a contribution is made or political work performed, a favor is expected, and the favor is universally adverse to public interest. A pay-off is the wage of corrupt practice. If these funds be used instead for dividends to the security owners and the rate payer, a real start to better public relations will be made.

The industry up to this very moment is playing its cards vertically. To play horizontally necessitates a complete reversal of previous financial practices. The symbols on the upturned cards should signify a definite rate, amortization, depreciation, and publicity policy. Our people are fair. If the industry can offer a fair and sound long-range formula for rates, amortization, and depreciation, the people will deal fairly with private power. If it cannot do so, power will be nationalized. After such an offer is made, the formula must be controlled. Regulation alone will not control. Regulations must be checked by competition; not competition from duplicated systems, but competition from public-informing yardstick plants.

The previous neglect of depreciation reserves may prevent isolated companies from making such offers. In such an eventuality the people will have to decide whether they desire to suffer or set up municipal or public district power. This decision should be controlled by facts rather than fiction. Keeping the record clear can signify nothing else than freeing the industry from the manipulations of financial jugglers, from antisocial methods, and stopping false propaganda.

There can be both physical and financial weak spots in a utility. Twenty-five years ago most of the complaints to State commissions arose from service. Since that time engineering advancement has been outstanding and represents a monumental achievement. Credit for this rightfully belongs to the apparatus manufacturers and the operating men of the line. Poor service is now almost nationally unknown. The status of depreciation reserves will control the future maintenance of the high service standards that our people have been taught to expect. However, the industry presents the absurd situation of having a remarkable physical structure standing on weak corporate and financial structures. These latter structures should be founded on actual costs and not on appraisals.

Regulatory bodies have permitted the manipulators to misapply the doctrine of the Supreme Court decision in Smyth against Ames. The trend of recent decisions is definitely away from such misapplication. When the minority opinion of Justice Brandies in the Bell case becomes the majority opinion, as it will, then balance-sheet values will fall to prudent values. The danger signal has been flashed. Deception cannot prevent the day of reckoning for juggled values. Innocent investors of previous issues can be protected only by immediate amortization. Prudent values will insure low compensatory rates.

Victory will come to the people in the form of fair rates and fair security values, or nationalized power will result. Final victory for the manipulator is impossible. The destiny of the industry rests with its leaders. In the meantime, public power must go forward as its competition is the per-

manent key to successful utility operation and the only protection of the consumers and security owners.

THE NIAGARA POWER CO. AND THE FEDERAL POWER COMMISSION

The remarkable hearings on Niagara, now taking place before the Federal Power Commission, have been practically ignored by the Washington press.

Because of my interest in the subject, and as supplementary to my speech on Niagara, in the RECORD of June 15, I submit these comments.

The Water Power Act of 1920 (40 Stat. 1063) provided that the control over the power resources of navigable streams be vested in the Federal Power Commission. The Niagara Falls Power Co. and its predecessors had, for years before the enactment of this legislation, endeavored to perfect a title claim to the Niagara power through Federal and State legislation. Not being successful in this endeavor, the company in 1920, after passage of the Water Power Act, applied for and received a license for the use of 19,725 cubic feet of Niagara water. This license covered all the allotted American share save 275 cubic feet.

The Water Power Act as originally enacted was a compromise measure. Conservationists, during the consideration of this legislation, contended for full, effective Federal control, whereas, the private-power interests urged an ineffective control. In the original act full authority was not given to the Commission to regulate rates, service, or security issues. During the early years, the Commission adopted a sympathetic attitude toward the private companies. The first annual report of the Commission stated that the cooperation between the Commission and the National Electric Light Association was the expression of a definite policy. From the start, the operations of the Commission were hampered because of the compromise features written into the original act, and a lack of proper administration. The private companies early took advantage of this situation and seemingly influenced the policy of the first Commission.

The laxity in carrying out the provisions of this original compromise act led to a Senate investigation. This investigation disclosed the ineffectiveness of the previous regulation. The charges and countercharges developed during this investigation demonstrated a lack of strength in the Federal agency and the influence of the private companies in the decisions of this Commission. President Hoover, therefore, sent a message to Congress in the latter part of 1929, recommending that the water-power law be broadened and that the Commission be reorganized and granted extended powers.

The 275 cubic feet previously noted represented water licenses granted originally to 11 power users on Seventeen Mile Creek and near Lockport, N. Y. The Niagara Falls Power Co., some 15 years ago, purchased these licenses for $1,750,000, and have since endeavored to have these licenses reissued in their name and the $1,750,000 taken into their capital structure. It is understood that the power company was informally advised through one of the officers of the old Commission that they could accomplish this objective. However, the disclosures of the investigation covered by Senate Resolution 80, Seventy-first Congress, second session, resulted in hearings on this license change being set for 1930 and 1932. Nothing was accomplished in these hearings.

The present Commission took up the Niagara matter again in 1936, and after a long and detailed investigation and endless delays manipulated by the power company, opened hearings on March 15, 1939. These hearings have continued since this date, except for recesses granted on the motion of the applicant. The hearings are now in recess and will reconvene on August 8, 1939. Although the original hearings were on the 275 cubic-foot license and its purchase cost, the investigation of the Federal Power Commission disclosed violations of the Water Power Act, especially the antitrust section of the law. The hearings were therefore broadened to include both licenses. The Commission has been placing in evidence factual testimony showing violations of the law. If this evidence stands, it should result in the largest antitrust suit ever attempted in the United States and will be the first case of its kind directed against the Power Trust.

The testimony presented to date shows what monopoly has done to Niagara power. The Commission's counsel has insisted that the power company should not be given a license for this additional water because—

First. The power company has abused a public-power resource and has violated the antitrust laws and the Federal Water Power Act, under which it derived its water rights. The Niagara Power Co. is giving extremely low-priced power to a few favored companies, while charging home owners rates three to seven times higher than existing rates on the Canadian side of Niagara.

Second. The power company is controlled by "four big happy families." These families are connected through corporate and interlocking directorates with practically all the large financial, railroad, industrial, and utility corporations in the United States and Canada. This colossal monopolistic combine has already been given too much power. The Federal Government should proceed fairly to recover for the people the benefits of this great water resource which belong to them. The Niagara picture is that of the mass power of organized capital which can rule or ruin America. These four families who control the Niagara Power Co. control practically every major privately owned hydro in the United States and Canada. The Mellon Corporation of Canada owns 53 percent of the Saguenay Power Co., which, with their associates, controls the privately owned Canadian hydro developments. These same interests control the major eastern railroads, the steel, metallurgical, and mining, the oil, food, finance, and insurance corporations.

The testimony shows that 16 New York, Pittsburgh, and Buffalo law firms act as agents for these interests in the capacity of a holding company in order to evade Federal regulation. This type of operation gives these subrosa holding companies a claim of immunity from investigation.

The evidence shows also that the same interests which control the power companies also control the industries. The power company has refused to sell power to any customer who would enter into competition with its favored consumers. Over 500 contracts in the restraint of trade have been presented in the hearings showing how the power company dictates who shall use this power and the purposes for which it shall be used. Some of the contracts forbid the power company from selling power to anyone but to the favored customers in each class of industry. Contracts between the power company and industrial consumers who are outside the combine forbid the use of Niagara power in the manufacture of products which would enter into competition with the favored group. The foreign customers can manufacture only those products definitely named in the power contracts. This system explains why no unaffiliated company can secure power in the United States or Canada for the manufacture of aluminum, liquid chlorine, and other chemicals. I have met their influence in my efforts to establish a Government sodium chlorate plant at Bonneville to help farmers in their great weed campaign. There is no question about the charge of monopoly and violation of the Water Power Act. The Commission has full authority to revoke the existing licenses, which will not expire until 1971. The struggle before the Federal Power Commission is one involving the most powerful financial and industrial group in America. The press has generally ignored the evidence presented in these hearings, and the average American is totally uninformed as to the damage caused by the monopolistic use of Niagara power. Credit is due to Mr. Caso March, attorney of the Federal Power Commission, who is doing a great work in investigating and presenting the facts brought out in these hearings. Credit should also be given Mr. Albert H. Jenkins, of Labor, for examining and briefing the testimony and making it public. This investigation confirms the conclusions of the study I have made, and I feel the country owes a debt of gratitude to these gentlemen.

The Key to the Economic Riddle

EXTENSION OF REMARKS

OF

HON. VINCENT F. HARRINGTON

OF IOWA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, July 12, 1939

STATEMENT FROM THE RAW MATERIALS NATIONAL COUNCIL

Mr. HARRINGTON. Mr. Speaker, under leave to extend my remarks, I want to call attention of the Members of Congress to the excellent work being done by the Raw Materials National Council in the field of economic research. This is an organization set up in the Middle West originally to get at the grass roots of our farm problem. Research developed that the agricultural riddle was part and parcel and, in fact, the key log in our general economic jam. From this research has evolved a program, nonpartisan, nonpolitical, which, in my opinion, offers the cure for our economic ills.

Accordingly, I include herein a statement from Mr. Carl H. Wilken, secretary of the Raw Materials National Council, entitled "The Key to the Economic Riddle":

THE KEY TO THE ECONOMIC RIDDLE

(By Carl H. Wilken, secretary, Raw Materials National Council, Sioux City, Iowa)

We are setting out the key to our economic riddle, and by the aid of simple mathematical facts that are borne out by the historical record of our economy, pointing out the accuracy of our deductions and the simplicity of the solution.

The key to our economic problems is the stabilization and equalization of raw-material prices, and especially basic farm prices. The point of stabilization and equalization of raw-material prices naturally falls at the point of parity, meaning equal exchange values between the raw-material producer, industry, and labor.

An examination of the historical record of our economy as regards the income of the raw-material producers, factory pay rolls, and national income show that our maximum consumption of goods per capita have taken place at parity. Periods of dislocation of the price relationship between raw materials and manufactured goods have resulted in periods of underconsumption when below parity and inflationary periods when above parity which have eventually resulted in booms and busts.

REASONS OF DISLOCATION

The reason for the dislocation of our economy with the fall and rise of raw-material prices can be attributed to the fact that the amount of money drawn out of our capital structure by the production and sale of raw materials, determines the flow of money or exchange medium in our business channels.

This relationship of money received by the raw-material producer is a direct and average mathematical percentage of factory pay-roll income and collective or national income.

Using the grass-farm income as a base, the relationship to factory pay rolls and national income can be stated in the mathematical ratio of 1–1–7 or meaning that for every dollar of gross farm income, there will be $1 of factory pay rolls and $7 of national income.

As proof of this relationship we call attention to the last 2 years of gross income and national income.

Farm income (gross):	
1937	$10,000,000,000
1938	9,000,000,000
National income (earned):	
1937	70,000,000,000
1938	63,000,000,000

Farm income is derived from the number of units of each commodity times the price per unit. Therefore an example of one crop will show the effect of a price drop on our economy. A normal crop of corn is 2,500,000,000 bushels and the parity price approximately 80 cents. The income from the crop and the resulting income for factory pay rolls and the Nation as a whole is shown by the table below.

Price per bushel, 80 cents. Number of bushels, 2,500,000,000.

Gross farm income	$2,000,000,000
Factory pay rolls	2,000,000,000
National income	14,000,000,000

Price per bushel, 40 cents. Number of bushels, 2,500,000,000.

Gross farm income	$1,000,000,000
Factory pay rolls	1,000,000,000
National income	7,000,000,000

As a result of the drop in corn prices from 80 to 40 cents the farmer loses a billion dollars, the men on factory pay rolls lose a billion dollars, and the Nation loses $7,000,000,000 of business turn-over.

The reason for this turn-over is the duplication of the use of money, a simple fact that our economists have not taken into consideration. For example a $10 bill when it is passed from hand to hand duplicates itself in purchasing power. Ordinarily this turn-over is about two and one-half times in each rural community. The income of the farmer when spent in the local stores creates an equal amount of income for the businessmen and when spent for labor, taxes, etc., is respent in the purchase of goods and things.

With this relationship of 1–1–7 we are forced to the conclusion and it is borne out by the facts, that with farm income at 70 percent of parity, our factory pay rolls will be 70 percent of parity and industrial production will be at 70 percent of parity, or normal capacity. The percentage of farm income below the parity price level is constantly reflected in an equal percentage of drop in factory production.

ALL RAW-MATERIAL INCOME

All raw-material income has a constant relationship to the national income of 1 to 5, or meaning that for every dollar of income from the sale of raw materials there will be created $5 of national income or business volume.

The gross farm income is the governing factor, and the use of other raw materials is in direct ratio to gross farm income. The heavy industries, such as building materials and steel, are nonessential to actual existence and in case of low prices for farm products suffer a larger drop in physical production. It is interesting to note that production of flour, textiles, and other food products remain fairly constant in physical volume even in depressive periods.

SURPLUSES OF TWO KINDS

Surpluses are the result of two principal factors—underconsumption and seasonal overproduction. With our domestic market $25,000,000,000 below that of a normal parity income for the Nation, and with overhead practically a fixed charge, it should be apparent that with full parity prices our domestic consumption would be at least 35 percent greater in all lines with prices stabilized at parity.

Seasonal production cannot be controlled, but the law of averages and adequate reserves can be used to level off production cycles. Our principal problem therefore is to maintain the prices of our basic food and fiber crops which have a yearly production cycle every 12 months. Products which are produced daily and marketed daily will automatically be stabilized from the supply-and-demand factor and the law of averages during the 12-month period will level off the price received.

For example, the farmer producing one crop of corn per year must be protected as to price. He cannot sell today and produce tomorrow, and if forced to sell at less than parity, the effect on our economy will be felt during the entire 12-month period. On the other hand, he can adjust his production of dairy products, poultry, etc., to the base established by feed grains. A low price one month can be offset by higher price the next month, or, in other words, he can get the benefit of average prices.

FOREIGN TRADE

Foreign trade is based fundamentally on need and purchasing power and will automatically take care of itself from the supply and demand factor with parity prices and parity tariffs. Parity prices cannot be maintained unless the farmer has equal or parity tariffs with other groups.

Parity tariffs would not prevent foreign trade but instead would increase our foreign trade. Our imports are in direct proportion to the national income or collective buying power of the Nation. With a full parity income resulting automatically from full parity on our basic farm crops, our foreign trade would increase in direct proportion.

With our domestic market approximately one-half of the world market, the greatest contribution that our Nation could make toward world peace, would be to solve our own economic problem by stabilizing raw-material prices at parity. The increased demand for foreign products created by our increased buying power would help to solve world economic problems.

The rest of the world could adjust their basic farm crops to our parity-price level in the same way that they adjusted their price of gold when we increased the value to $35.07 per ounce. The increase of world prices on basic farm crops would create an increase in the circulation of money in the same way as it would in our domestic economy. There is no danger of world surpluses of goods and things because with the same buying power a sour domestic level for the rest of the world they would have to increase their production 12 times to furnish the goods that they could consume if they had the purchasing power.

HOW CAN FARM PRICES BE STABILIZED AT PARITY?

Only three steps are necessary to stabilize and maintain farm prices and other raw-material prices.

1. Parity prices on basis farm crops (using the 1922–29 commodity index as the base of 100) to be maintained by means of commodity loans, storage of reserves, and effective parity tariffs.

We wish to call your attention to the fact that parity prices and parity tariffs are equal prices and equal tariffs with other groups and regardless of whether you advocate high or low tariffs, the mathematical law that governs your economy requires that the farmer must have equality in both prices and tariffs. You cannot deny that he has that right.

2. Establish confidence in the building of new industries to consume farm products by an incentive tax or by subsidizing their operation until such time as technological improvements make it possible for them to operate at the parity level.

3. A proper realization that our economy consists of trading real wealth, goods, and things rather than money and that our medium of exchange consists principally of credit dollars based on the return from production of raw materials, the processing and distribution of the finished product and the services performed by labor. The relationship of the credit dollar can and should be maintained at the point of parity or a 100-cent dollar.

The use of the commodity loan for such purposes is provided in the Constitution which gives Congress the right to issue money and set the value thereof. The commodity loan is nothing more than an issue of credit dollars against the commodity and if the call date is based on parity price as a yardstick the value is automatically set at 100 cents between groups.

Our failure to use the commodity loan properly has resulted in stabilizing corn and cotton at less than parity on the domestic market and our national income has naturally been less than parity, thus forcing us to borrow money for the various methods used to create buying power that should result normally from the sale of raw materials.

LEGISLATION REQUIRED

The necessary legislation to bring about actual parity prices has already been introduced in both branches of Congress. H. R. 6159, by Representative HARRINGTON, of Iowa, and S. 2481 by Senators BURKE and GILLETTE. These bills would lay the foundation and could be supplemented by simple measures to subsidize new industries as is contemplated in S. 552 by Senator GILLETTE, of Iowa.

They provide adequately for the necessary base for stabilization, reserves, parity tariffs, etc. Although simple in wording, their effect would be to increase our domestic income at least $25,000,000,000, restore prosperity, reemploy our labor, and make it possible to balance the National Budget.

CONCLUSION

We wish to point out in closing that our problem is entirely monetary because there is no reason why we cannot consume more goods in 1939 than we did in 1928–29, with the additional increase of population since that time.

The economic problems of the entire world can be righted if we will take the lead and establish a sound economy based on the actual production of goods and things. We of course must remember that we use our medium of exchange to settle balances between different types of goods and that the annual production of real wealth must create enough money to pay all cost of government, production, processing, and distribution of our raw materials.

And finally, it is our contention that regardless of who is elected President or what political party has control, we will be forced to borrow money to the point of bankruptcy unless we establish the parity-price relationship between goods and services.

Just as 2 times 2 equals 4, our economy is based on the simple multiple of 1 times 7. If we wish to operate our Nation solvently, the number of dollars drawn out of the capital structure through the production and sale of farm products multiplied by 7 must give us a national income sufficient to pay all the bills. We must use arithmetic rather than theory and recognize the definite mathematical ratio that exists. We have the wealth and if we maintain the price level at parity we will automatically have the income. The only time that we ought to have a depression is in periods of drought and if we provide for adequate reserves we need never have a depression.

In the last 9 years we have lost $250,000,000,000 in national income because we did not recognize the importance of farm income. We will lose another $25,000,000,000 in 1939 and be forced to borrow $4,000,000,000 to feed and clothe the Nation. Let's use some common sense and arithmetic and stop this loss in the midst of plenty.

A man once said "The world lost 4,000 years of progress because no one took the 20 minutes to learn how to lay bricks properly." In the same way it may be said "Our Nation has lost billions of dollars of income, suffered privation and despair because no one took the time out to analyze our economy and the operation of money in our economy." We failed to realize that for every dollar taken off the farm income, regardless of cause, the Nation has suffered a loss of $7 in collective income. We have operated our domestic economy without a sound foundation. Let's stop patching the roof and fix the foundation. Then our economic house will help preserve the democracy which we value so highly.

Further Views on Mining Problems

EXTENSION OF REMARKS
OF
HON. JOHN R. MURDOCK
OF ARIZONA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, July 12, 1939

Mr. MURDOCK of Arizona. Mr. Speaker, under leave to extend my remarks, I wish to include a copy of a letter which I recently sent to the small-mine operators' associations in Arizona, and also a short editorial from C. C. Beddome, in the Brewery Gulch Gazette, of Bisbee, Ariz., under date of June 29, this year. These call attention to some of our mining problems as the mining men of Arizona view them. First is the letter to the small-mine operators' councils, of which there are 50 in Arizona, and following it is the editorial.

JULY 8, 1939.

Secretary of Small Mine Operators' Association.

DEAR MR. SECRETARY: You have probably already been notified through the press of recent action in Congress pertaining to mining, but I want to add a word concerning certain measures in which I have interested myself in your behalf. Such measures, or proposed measures, are (1) a mining moratorium; (2) an extension of time for assessment work; (3) a continuation of a price of $35 per ounce for gold; (4) securing a better price for silver; (5) continuing the 4-cent duty on foreign copper; (6) developing our strategic materials; (7) modifying S. E. C. regulations to increase investments in mining; and (8) extending R. F. C. loans to further mining development. Of these eight items, we have been successful entirely or in part in regard to six of them—that is, from (2) to (7), inclusive—and have fallen short somewhat in regard to the first and last as numbered above.

Having said that we fell short or failed in regard to No. 1, I ought to explain a little further. When I came back to Washington in January this year it was with the idea that no annual moratorium would be expected, and therefore I did not introduce a bill this year, as I did last. In the House, Congressman JAMES O'CONNOR, of Montana, did early introduce such a bill, but consideration of it was blocked by previous action of the Senate on a companion bill. Your association in Phoenix suggested a compromise bill, but I could get only a few Members of the House to accept it and saw no chance of getting it through. Therefore, I tried the only thing possible, and that was an extension of time. Western Congressmen suggested a 60-day extension, and I put it 90 days in my bill, expecting it to be cut down if and when it passed the Senate. It passed including a 60-day extension, and was signed on June 30.

The six items named above have been written into law, though not all of them as we might wish. All legislation here is a compromise and one is lucky if he gets 20 percent of what he aims for. Mining legislation has more than usual hard sledding because of the small number of Representatives from the mining West, and for other reasons.

The seventh and eighth items named above are yet to be worked out. They are of vital importance and it is going to be very difficult, if at all possible, to get adequate and satisfactory legislation and administrative action on S. E. C. or R. F. C. participation. I shall keep at it.

Sincerely yours,

JOHN R. MURDOCK.

The following is a part of the Gazette's editorial:

Once again the western delegation in Congress scores a smashing victory. The hike in the price for domestically produced silver from 64.64 cents per ounce to 77.57 cents means so much to the West that it is hard to realize the benefits that will accrue.

NOTE.—This was later fixed at 71 cents per ounce.

Men will go to work, money will go to work, new small properties will be developed, materials and supplies will be sold by the dealers, new tax rolls will be created, and a general upturn in business will result.

It was the last mentioned item that finally changed the minds of some of our hitherto deaf Senators from the East to come to the realization that the East and the West had something in common. For how could the West buy the manufactured products of the eastern factories unless the East aided in the development of the mine resources of the West? This argument bluntly told by our blunt-speaking westerners finally convinced the eastern objectionists that cooperation and harmony would produce unity for everyone concerned.

If something can be done for the manganese industry now, after a 15-year shutdown, then Congress will have scored again. Our

Army and Navy procurement departments state that their annual requirements exceed 800,000 tons of ferromanganese ore. The fabricating plants use a similar amount annually, yet this metal is imported from Bolivia, Brazil, South Russia (Georgia), Straits Settlement, and so on, while here in America we have millions of tons of this ore available. The Emma Mine at Butte, Mont., can produce 70,000 tons annually at present, and with the assurance that they could dispose of more of this metal they could step that production up to 400,000 tons per year. West Virginia and the Carolinas are producing high-grade manganese and there are 28 States throughout the Nation that could be put on production if the owners were assured that the money invested would be returned. Cuba likewise is a producer of manganese and could supply in the neighborhood of a quarter million tons annually if they were given a chance at the American market.

Other strategic and critical war materials can be produced within these United States, but our dear public servants in Washington have repeatedly given these purchases to the American capitalists who have sent their money into the foreign field to return the finished product home to compete against our own factories that are nearly all idle; then they boast that United States factories and producers are unable to provide the requirements. It is high time that the Washingtonians come to the conclusion that they are being watched and that no more nonsense of this sort will be tolerated. We have the natural resources, we have the factories, and we have the trained men that can fabricate and market the finished product. Therefore, why go to the foreign field for the things that lie in our own back yard? It's high time that something be done about it.

In conclusion, Mr. Speaker, I wish to say that in addition to the problems indicated heretofore, the mining men of the West are very jealous of their rights under the mining laws and are fearful of encroachment by citizens engaged in other industries. For instance, mining men feel that there is always danger that mineral areas which may not be fit at all for agriculture, and only slightly fit for grazing, may be closed to mineral entry, or that there is a tendency in that direction. They view with great concern any legislation, or policy of the Government, which would restrict their mining operations or limit their enterprise in mineralized areas wherein they have formerly been free to operate.

It is a well-known fact that vast areas of the West are fit only for mining or possibly mining and some grazing. Other nonmineral areas are suitable only for grazing while still other nonmineral areas in fertile valleys may be suitable for reclamation and homesteading. Too often in the history of our past there has been a conflict, a clash of interest among mining men, livestock men, and homestead settlers. It would seem that a wise national policy would exclude none, but would foster and protect the interest of each of these classes of our citizens in due proportion and so shape the law, and our administrative control, that each class will prosper and contribute to the country's prosperity.

The Interest of the Farmer in Water Transportation

EXTENSION OF REMARKS

OF

HON. VINCENT F. HARRINGTON

OF IOWA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, July 12, 1939

Mr. HARRINGTON. Mr. Speaker, for the past several years this Nation has been struggling with the perplexing problem of trying to increase the national farm income. The national farm income has been distressingly low and it has had a depressing effect upon our national economy as a whole.

Producers of farm products have many items of expense in the production and marketing of their crops, and one of the most important of these is the cost of transportation. A rise or a fall in transportation costs is reflected back to the farm, for it is the farmer that pays out of his own pocket the cost of transportation when he markets his products. In many cases farm products must be transported long distances to consuming markets in this country and to tidewater, preliminary to shipment to markets abroad. The cost of transportation on farm products in this country adds up to a huge sum and, in the main, the burden of this falls upon the producer of these products. Transportation, therefore, has always commanded the interest of the farmer, and he and his representatives have been continuously active in seeking to obtain the lowest rates possible, for in the trying times of recent years he has been obliged to use the lowest-cost transportation available in order to survive.

Our State and National Governments have always evinced great interest in transportation costs on farm products. Railroad and warehouse commissions of States in the farm sections have been alert to see that transportation costs are as low as reasonably can be made, for these commissions recognize the tremendous importance of cost of transportation to the farmers of these States. Our National Government has also recognized the necessity for maintaining reasonably low transportation costs for products of the farm. The Hoch-Smith resolution passed several years ago, and still on the statute books, endorses that principle.

Notwithstanding the efforts of State and National Governments on behalf of the farmer, transportation costs by rail have been maintained at relatively high levels—there have been many increases throughout the country during the last 20 years in rail rates on farm products—despite the increasing distress in farm sections of our country. So we have a condition where the farmer's ability to pay is much less than it was several years ago and the rail carriers requesting and demanding higher and higher rates for the transportation of farm products.

Every student of transportation knows that certain bulk commodities such as grain, coal, ore, and petroleum products can be transported by water at substantially lower costs than by rail—and this is particularly true where long distances are involved, such as shipments from the head of the Great Lakes to Buffalo, Oswego, and the Atlantic seaboard, and also on long-distance shipments on the Mississippi and Ohio Rivers and on the New York State Barge Canal. Cargoes of bulk grain can be transported by water from Duluth, Minn., to Oswego for a few cents per bushel and the lake carriers are able to make a profit, even though it may be small, for themselves at this low rate. Rail carriers can never expect to compete with water transportation of this character for grain cannot be shipped a distance of 10 miles by rail as cheaply as it can be transported this long distance on the Great Lakes. The inestimable benefits of water transportation on the Great Lakes and connected waterways have been reflected back to the producing farmers of the Northwest in better prices for their grains and it cannot be denied that without the benefit of low-cost transportation on the Great Lakes, many sections of the Northwest would have to give up farming.

The National Government has recognized the value to our people of waterways and it has been consistently active in its efforts to make these great and vital channels of commerce accessible to the people of this country. Low-cost transportation has been and will continue to be one of the most important needs of this country. The farmers are in desperate need of it.

It, therefore, seems a backward step to endorse the Wheeler-Lea bill. The intent and purpose of that bill is to apply the same destructive rigidity to water rates as has contributed to the confusion in rail transportation. Water carriers are getting along very well—they want to be let alone—they are doing a good job and deserve to be let alone. The Wheeler bill because of its injurious effect on water transportation—by either raising rates to unjustifiably high levels or by destroying it—will increase enormously the transportation bill of this country when the country can ill afford to pay it. I am sure the farmers of the country cannot afford it. I am sure, also, that when they find out that their transportation bill has been increased needlessly there will be loud and vigorous protests.

This bill is an anachronism—it belongs to the Dark Ages. Instead of considering measures to increase the cost of dis-

tribution, we ought to be giving our time and attention to measures that will decrease the cost of distribution in this day and age. I repeat, the passage of this bill will be a backward step—and a costly step—for the great mass of citizens in this country who are struggling to survive.

Can We Hold the Richest Land on Earth?

EXTENSION OF REMARKS

OF

HON. JOHN D. DINGELL

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Wednesday, July 12, 1939

ARTICLE BY W. B. COURTNEY

Mr. DINGELL. Mr. Speaker, under leave granted to extend my remarks in the RECORD, I include the following article by W. B. Courtney, which appeared in Collier's for July 1, 1939:

[From Collier's of July 1, 1939]

CAN WE HOLD THE RICHEST LAND ON EARTH?

(By W. B. Courtney)

It is the richest country on earth. And competent observers declare that its riches are not yet really touched. It is a country lying fallow, waiting for people with the shrewdness and the gumption to take advantage of it.

The American flag flies over this rich land now. But it is going to be hauled down soon. The work of two generations of American businessmen and administrators and teachers, the developments paid for by American taxpayers, will be tossed into the international grab bag. That isn't the intention or the idea. But everyone in the Orient believes it will be the upshot.

When the United States took over the Philippines their riches were only suspected. Today, enough is known to drive mining engineers balmy with dreams. Enough is known to give pause to world economists. Enough is known for responsible leaders to estimate that the natural resources of the Philippine Islands are adequate in all save one element—tin—to supply the whole needs of the United States in case of wars, long or short, independent of world raw-material markets.

FOR MEN WITH ENTERPRISE

"Enough is known," an official American Government technical expert told me, "to furnish abundant proof that with the resources of the Philippines honestly exploited, the United States could really become that enviable thing which every major power on earth longs to be and which not a single major power actually is—entirely self-sufficient."

He doesn't mean that everyone in the Philippines is rich. There is misery and failure there. Worse, there is virtual peonage, all the wretched inequalities of a system that draws its heritage from both European medievalism and oriental despotism.

In spite of the efforts of the United States, the humbler people of the islands are still more than 40 percent illiterate culturally; more than 90 percent illiterate economically.

What is meant is this: That to men with initiative and enterprise the Philippines are uncommonly, incredibly bountiful. If the Philippines were a State of the Union they would stand fifth in land size. They are 10 times bigger than Holland or Palestine; much larger than the British Isles; nearly twice as large as old Austria-Hungary. Yet they have a population of only 15,000,000, barely exceeding that of New York State. Japan, slightly bigger, has a population of 80,000,000. Italy, almost the same size, has 45,000,000.

In a world of striving nations, hungry for raw materials, the Philippines, alone of vast and fertile areas, remain virgin.

Their very physical appearance, their geography, their throat-choking beauty under all conditions of season and weather, seem to thrust forward a guarantee of wealth untold.

There are 7,083 of the Philippine Islands, and it is doubtful there is a man alive who has laid eyes on all of them. They hang like a rocky triangular brooch down the western chest of the Pacific, for more than a thousand miles.

Nearly 5,000 of the islands are unnamed; less than 500 have an area of one square mile or more. Yet, such is their infinite variety, that Luzon, the largest island, is a few miles bigger than Ohio; Mindanao, the second, is bigger than Indiana. Eleven of the Philippines are larger than Rhode Island plus the District of Columbia.

LAND OF BOUNDLESS WEALTH

The impression of a land of boundless natural wealth increases, rather than diminishes, when you get nearer, more intimate, views. The tao in his nipa shack really seems a fellow to envy. There is lushness on every hand; tangled slopes, rushing overhung jungle rivers, single plantations that unroll from your toes to as far as vision can reach. Dense forests, the most valuable known to mankind, with more than 1,000 species of trees and plants that have commercial uses (although less than a fifth are yet brought to market). Everywhere is the stately palisading of the coconut palms.

Your money, as an American taxpayer, helped to bring these resources out of rumor into reality. Your money and efforts paid for roads and communications and education that made them available.

You ought to know just what we are giving up when we give up the Philippines.

An economist of the staff of one of the American Government officers listed the major items:

"The natural resources of any land, of course, fall under grouping of forestry, agriculture, minerals, fisheries, water, health, and enlightenment of the inhabitants.

"More than half the land area of the Philippines is forest; 80 percent or more of it has commercial value, much of it rare and priceless hardwood, some used in airplane manufacture. There are about 500,000,000,000 board feet of standing timber here. That's more than in Oregon, the greatest timber State; and one-fourth as much as in the whole of the United States.

"More than 40 percent of the land area, apart from the forests, is available for agriculture. Only a third of this is actually used—but it's there, waiting and fertile. In other words, almost 100 percent of the area of the Philippines is available for the uses of man, to support and enrich him.

"One trouble with the Philippines in world economics is they are too rich, too productive. Coconuts you know about. Sugar, rice, tobacco, pineapples, tropical fruits—all these things the Philippines can grow so abundantly that they upset the world markets, and various restrictions have had to be imposed. But we are not concerned with tariffs and competitions now—only with the fact of pointing out the growing power of the Philippines as a natural resource which could be permanently added to our own.

CORDAGE, RUBBER, AND QUININE

"Abaca—or manila hemp—is perhaps the showiest of the Philippines' agricultural products. It makes the finest rope and cordage known; strongest, lightest, and most durable. It gives the Philippines a monopoly. It ties up the ships and the packages of the world.

"Years ago a great American rubber company experimented in the southern islands, found out that rubber could be grown there limitlessly. But local politicos and politics frightened it away. It is definitely known that the islands could grow all the rubber that American companies now grow in Liberia and in South America.

"The Dutch have a world monopoly on quinine. We could manufacture enough quinine to control all the malaria in our South, supply any possible war needs, and break the Dutch monopoly.

"Other experiments by American medical and agricultural scientists show that we could grow here virtually all the essential herbs and plants which are the basis of Chinese pharmacopoeia. That, in turn, is the basis of world medicine.

"The British have a world monopoly on tannic acid. This can be obtained from mangrove bark, and enough mangroves now exist in the islands to break the British monopoly—if they were exploited.

A VAST WEALTH IN MINERALS

"I am just trying to help you get a true picture of how the resources of the Philippines suggest endless possibilities for progressive and adventurous businessmen, provided they knew they wouldn't be left out on a limb, deserted by their flag, at the mercy of oriental politicos. Fabulous fortunes are still lying all around out here, in the ground, literally on the trees, waiting to be picked up.

"Size for size, the Philippines contain more gold than any other part of the earth's marrow. Listen, the truth about the mineral resources of the Philippines is simply this: You can stick a shovel down in your back yard any place, and you are bound to turn up pay dirt of some kind if you aren't splashed by an oil gusher, or a coconut doesn't drop on your head.

"Government and private mining experts say that the true whacking extent of all the mining range of the Philippines is still virtually unknown.

"Iron and manganese, for example, two of modern life's most vital necessities, are being produced faster and faster here each year, and Japan takes all of both. At the rate the manganese production is going up, in another few years the Philippines will be supplying all of Japan's requirements. Think what that will mean to Japan's steel industry—its whole supply of manganese right next door, whereas now much of it has to be transported thousands of miles from various British colonial ports.

"And there are copper, asbestos, chromite, lead, platinum, zinc, oil. But nobody is going to invest much in a land that might become a battlefield, or be confiscated.

"Maybe we could buy elsewhere the raw materials needed for war, in time of war. Maybe ally politics, or enemy forces, would

cut us from those markets. The important thing is that here in the Philippines we would have the necessary sinews under our own flag, independent of world markets."

JAPAN HELPS HERSELF

On the inaccessible coasts, under the mountain fastnesses of northern Luzon, the Japanese are boldly and frankly helping themselves today to the natural resources of the Philippines—without payment. Japanese fishermen net in Philippine harbors. Other Japanese ships anchor, send crews ashore, build logging camps, and steal millions upon millions of board-feet of the best Philippine hardwoods each year.

This is known to the authorities. Because it happens in areas so remote it is difficult for constabulary patrols to reach them; because word of the activities is withheld by bribed provincial officials; and because the Commonwealth has not yet enough armed vessels to establish an effective guard—nothing can be done about it.

The Japanese Government "officially" knows nothing. But you continue to read in Manila papers of fights in lonely barrios in which natives are killed by Japanese lumber or fish pirates.

These are small affrays, which can suddenly grow into large ones.

The confused status of Philippine-American relations, the uncertain political future of the islands, makes them a danger spot.

The richest land on earth, they stand as a ready-made colonial prize for any one of the inflamed nations that have been scrabbling recently for deserts, for arid and undeveloped wastes of problematical values.

"It is a tree-ripened plum," said a French official in Shanghai, "with dictator nations standing around like a lot of little bullies in an orchard awaiting its imminent fall—each hungry lad hoping against hope that some unforeseen shake of the branch might bring it into his fist."

Three courses are open to the United States to end this suspense—and this hazard:

First, to extend permanently the present economic cooperation and trade preferences. Remain, in brief, the benevolent "Uncle."

Second, to cut loose absolutely and let the Philippine Republic take its chances economically and politically among the family of free nations.

Third, hold onto them, frankly and boldly. Repeal the Tydings-McDuffy Act; annex the Philippines.

The first course, most everyone who knows anything about the islands agrees, is the most perilous. Under the Tydings-McDuffy Act, which provides complete independence for the islands at the end of the Commonwealth period in 1946 we end gradually our old reciprocal free-trade relations with them. A joint commission has recommended that Uncle Sam not button his pocket until 1960. The Commonwealth with a lobby of its most astute and charming big shots, is striving desperately to have the free trade extended for all time.

A GUARANTY OF WAR

This would give the United States the responsibility for the Philippines without the authority. It would complicate our national military policies, increase our armaments budget. It would give us much expense but little profit. It would permit unwarranted competition to some domestic products. Its "preferred nation" trading privileges would inevitably bring friction with Japan, the best foreign customer of the Philippines. Justifiably the Japanese could ask for the same privileges we got. It would make us the "cop" of the Orient; forced by mutual interests to police and safeguard the decaying chestnuts of France and England, as well as our own.

The second course, washing our hands completely of the Philippines, would be less dangerous. Provided we take home all our soldiers and sailors from the Orient. Provided we resolutely shut our eyes to subsequent events in the Philippines, no matter what happened there, no matter which nation snapped them up. Provided we close our ears and turn our backs upon the inevitable calls for help.

The third course is to hold onto the richest land on earth. Frankly, to develop and exploit and enjoy the wealth in the way the British and French and Dutch draw treasure from their colonies.

To give the Philippines up, Ford Wilkins, an American in Manila suggests, is as though some foreign nation conquered us after we had kicked loose from Britain in 1776, improved and developed us to modern times—and then handed us back to the Indians.

THE FLAG IS PROTECTION ENOUGH

The great fear of Americans at home seems to be that if we do not clear out of the Philippines we shall get into war over them. Americans on the spot, who should know, say this is a misunderstanding; that quite the contrary is true.

We are far more likely to have a war with Japan over the Philippines if we give them up than if we hold them.

We do not have to expend enormous sums, build huge armies, to hold the Philippines. Our flag over a territory—if other nations know we are not fooling, and will back it up—has greater effectiveness than cannon.

Neutrality

EXTENSION OF REMARKS

OF

HON. ROBERT F. JONES

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Wednesday, July 12, 1939

Mr. JONES of Ohio. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following address which I delivered recently over the radio:

Last evening my 7-year-old son and I rode on one of the great transcontinental trains from my district in northwestern Ohio to Washington. The distance of 500 miles would embrace the heart of Central Europe where the eyes of our press headline hunters and the ears of our radio commentators have been turned for months. Through the night we glided securely in our berths, well knowing we would not be disturbed by any officers of the States of Ohio, Pennsylvania, and Maryland as we crossed their borders.

Had we been traveling a like distance in central Europe, we would have been yanked from our sleep by the strong arm of every country we entered during the night. As many times our bags would have been searched. As many times our money would have been worthless and necessarily traded for that of the country we lately entered. In Germany, we might have been questioned by youthful officers born since the war, who were yesterday children of a German Republic long since bled dry by reparations payments to France and other former allies under the Versailles Treaty.

Reparations payments, like high taxes, mean less food and fewer jobs. This is the reason many Aryan and Jewish children in Germany never knew the luxury of daily milk at the front door until 15, 16, or 17 years of age.

Overnight boundaries have changed in central Europe. These boundaries know no family lines, affections, filial obligations, and mother's hearts. They tie sons to the soil on one bank of a boundary river in sight of hearthstone lights in the old family homestead on the other side of the river.

From both sides once children came in joyful glee and their voices resounded upon the water happy understanding of their forbears who tilled the soil on either side. From childish pranks to romance, to marriage, to homes, to families, they moved freely from one side to the other in one great country of common blood, common traditions, and common understanding. The rigors of war, the will of princes and potentates unknown to America, so well known to Europeans, take shape in entangling alliances, putches, marches on capitals, and the river changes from a peaceful stream of trade and commerce to a treacherous torrent of hate, splashing the waters of distrust against either shore and setting father against son, brother against brother as inevitably as the sweeping flow of the water.

If we Americans get into another war, one reason will be that our memories are too short. We must remember the policy of England with reference to her colonies. Every time England establishes a colony she sets up a trading post and imposes a heavy tax to maintain the British Isles. On the other hand the United States, in her colonies, provides schools to educate her provincial citizens. Holland is rich because of oil in the Dutch East Indies. France has vast resources in African colonies.

Germany, pushed by the pressure of increased population, which she encouraged, wants to expand in colonies taken from her at Versailles. She wants revenue from her old colonies for the fatherland. Italy wants the colonies promised to her before she entered the war on the side of the Allies.

So let us understand, my friends, when we talk about policing the world, some of the practical things that cause war must be cut away from the lives of the countries of Central Europe as a surgeon would cut away a cancerous growth from the healthy tissue of one's body. That we cannot do. Let us remember some of the traditions of American foreign policy and the provisions of our Constitution as to who shall deal with foreign countries and who shall determine our foreign policy.

The power of the National Government to control foreign relations of the United States is both complete and exclusive.

In 1793 war broke out between France and England. The brilliant Washington, eminent statesman, successful Executive, astute scholar, capable general, the Father of his Country, ex-surveyor, soldier, author, beloved character, already belonging to the ages, the idol of his fellow men, undaunted by insurmountable tasks with the young Republic, must have possessed a deep feeling of gratitude for the assistance of his friend, General Lafayette, of France. He surely could yet feel the hot breath of the tyrant King of Britain at the point of his defending sword. His heart surely beat in sympathy to the fallen dead in the battles of the

Revolution that set his countrymen free. He surely yet had dammed up inside his magnanimous heart the pity, the compassion for the men who left their bloody footprints at Valley Forge because a tyrant stalked upon our shores.

He must have sensed the stirring hearts of grateful freemen, anxious to pay their debt of gratitude to their benefactor, France. He must have felt the personal ties of love that existed between his countrymen and France.

He loved Lafayette and France none the less because he loved his countrymen more. With the price of liberty, the happy hearts of freemen in a great republic seared deep in his soul, he issued the first neutrality proclamation of these United States of America. The observance of the rules laid down in these few short phrases commanded conduct of the American people so that we avoided that war.

Bear in mind that the first neutrality proclamation was issued by the President under his constitutional authority after war had broken out between France, England, and several European countries.

In the House of Representatives an arms embargo was attached to the Bloom neutrality bill. It is claimed that the arms embargo will be a green light for Hitler and Mussolini to carry on a new European war. Obviously the State Department in approving the Bloom bill without the arms embargo must have meant to leave the door open for shipments of munitions to one side of a great mortal conflict anticipated in Europe.

The American people wanted a bill that would provide for our taking no sides in that proposed conflict.

Any neutrality legislation gives wide and extra constitutional powers to the President, and the people of the United States are already afraid of the bias and the prejudice of the present holder of that office. They have listened to the statements of this President. They have listened to the address of the President before the Seventy-Sixth Congress on January 4 where he virtually invited us to join a holy war. They have listened to his Chicago quarantine speech. Laying this President's statements by the side of the proclamation of neutrality of George Washington, the people do not feel that this President bears the armor of peace in his soul.

Americans look to neutrality legislation to curb the power of any biased officer because they well know that threats demand a backing of force.

What are the constitutional powers of the President that Congress cannot make illegal?

Executive power is lodged by the Constitution in the President of the United States.

The function of managing the foreign relations may be classified into two distinct branches:

First: The power of intercourse, intercommunication, and negotiation.

Second: The power of entering into formal or binding international compacts.

The second power is shared by the President with the Senate, but the former belongs exclusively to the President.

The President is the sole organ of the Nation in its external relations and its sole representative with foreign nations.

The act creating the Department of State in 1789 was an exception to the acts creating other departments of the Government. From the beginning the Senate has never assumed the right to direct or control it, except as to clearly define statutory matters not connected with the conduct of our foreign relations.

The President possesses the whole power of initiating and formulating the foreign policy of the Government.

We have seen the President exercise that power freely. He may refuse to give us any information as to what his foreign policy is. The President, through the State Department, has the exclusive channel of communication between this country and foreign nations. Agents of foreign countries rely upon his word and rely upon Congress to back up its agent.

The President is bound in diplomatic correspondence to discuss the proper construction of treaties. He must formulate the foreign policy of our Government. He must state our attitude upon questions constantly arising.

The people of America do not want the President to commit us to any combination of foreign powers who by treaties and pacts duly consummated among themselves, may bind us by their conduct and alliance, by political intrigue on the happening of a certain event that they have provided for, that we should go to war.

The President possesses the initiative in foreign affairs. He cannot conclude a treaty with a foreign power without the consent of the Senate, but he may secretly guide every step of diplomacy. He can initiate and formulate such foreign policies as he may deem proper, and virtually commit Congress and the country to their execution.

Policies leading to disturb relations with foreign countries and even endangering the peace and safety of the country have been adopted at the will of the Executive.

In 1826 President Adams was about to send representatives to the Panama Congress. Several Senators opposed him because our very taking part would involve us in "entangling alliances" and incur the risk of war with Spain.

No matter what action the Senate or Congress might have taken President Adams still could have constitutionally provided for such a mission on his own authority.

This affair illustrates that the President alone has the power to decide upon a certain diplomatic policy such as this mission presented. It was his exclusive power to determine if the consequences would involve the peace and safety of this country.

The Virginius incident in 1873, the Venezuelan affair in 1895, President Wilson's Mexican situation, illustrate the power of the President both to bring on and to avert diplomatic crises. The Monroe Doctrine, the annexation of Texas, the Mexican War, the Alabama claims settlement, the acquisition of the Panama Canal, the "big stick" doctrine, our entrance into the War with Germany show the Executive leadership in the field of foreign relations.

The President, through this exclusive control of diplomatic intercourse, holds in his keeping the peace and safety of the United States.

It has been suggested by some newspaper circles, and denied by the President, that the President suggested a conference on the high seas between the United States, Italy, Germany, and other European powers.

Whether we have neutrality legislation or not if the President wants to meet upon the high seas with Hitler, Mussolini, Chamberlain, Daladier, or Kaiser Wilhelm, that neutrality legislation will never stop him. He can commit us to war and neutrality legislation will be of as little value as a bucket brigade in the Chicago fire.

Has anyone ever disputed the President's power to recognize the belligerency or independence of new states and governments? Has anyone questioned his right to protect the Czechoslovakian Embassy in the city of Washington against the orders of the German Government?

In 150 years of our constitutional government recognition has always been extended as the exclusive act of the President. New states come into existence often by revolution from an existing state. Recognition is a normal act provided the new community has won its contest and successfully maintained its separate existence and independence, but a proper recognition and a premature recognition are entirely two different things. The President of the United States again can commit us to war, and neutrality legislation will not help one iota.

In 1817 President Monroe, sympathetic with the cause of South American provinces, declined to recognize these new states until he was satisfied that Spain would not resent the act with war.

President Jackson was extremely cautious about a premature recognition of Texas.

The power of recognition belongs to the President. How easily that power may involve us into serious complications with foreign nations when the maps are changed again in Europe.

The President has power to receive and send accredited envoys and the power to withdraw the diplomatic representatives at his pleasure, or dismiss representatives of foreign powers. Suppose he recalls our Ambassadors to England and France. How long can we stay neutral with all news of the conduct of England and France coming through German and Italian diplomatic channels were they at war?

Let us remember that trans-Atlantic cables from the United States to Germany were cut before we declared war against her.

Will proposed neutrality legislation stop a President of the United States who is intent upon placing his bid in power politics in foreign alliances from exercising this power in such a way as to produce an immediate incident with foreign nations?

The President has publicly spoken that he would use methods short of war.

The people of the United States want their President to divorce his personal bias in favor of one group of nations as against another group of nations, as Washington divorced his love of Lafayette and France from the well-being and the peaceable continuity of the Republic of the United States.

The people of America want only a simple, forward, honest neutrality proclamation enforced by the Chief Executive of the United States, as was the neutrality proclamation of the Father of our Country.

The people of the United States resent open letters to foreign governments over affairs that have our personal sympathy and compassion but which are none of our national business. They resent notes of protest from our State Department that infer our personal biases and prejudices.

The people of America resent military flourishes that shadow totalitarian state receptions to indicate our friendship for or against certain sides in a proposed mortal conflict.

The American people await a judicious, carefully guided, sober proclamation of a President of the United States that will guarantee our independence from foreign entanglements.

Share of the National Debt and the New Deal Debt Apportioned by Counties in the State of Massachusetts

---

EXTENSION OF REMARKS

OF

HON. JOSEPH W. MARTIN, JR.

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Wednesday, July 12, 1939

Mr. MARTIN of Massachusetts. Mr. Speaker, the following statement shows what Massachusetts' share of national

debt and of New Deal debt will be on June 30, 1940, broken down by counties, according to Budget for which we are now appropriating.

The 1930 United States Census figures were used for the apportionment.

The New Deal debt is that part of national debt incurred from March 4, 1933, to June 30, 1940.

	Population	Assessed valuation of real and personal property Jan. 1, 1938	Share of national debt on per capita basis	Percent of assessed valuation	Share of New Deal debt on per capita basis	Percent of assessed valuation
Massachusetts	4,249,614	$6,243,408,930	$1,538,360,268	24.6	$815,925,888	13.0
COUNTIES						
Barnstable	32,305	99,164,916	11,694,410	11.7	6,202,560	6.3
Berkshire	120,700	139,340,723	43,693,400	31.4	23,174,400	16.6
Bristol	354,590	339,404,032	131,981,580	38.9	70,001,280	20.6
Dukes	4,953	17,286,776	1,792,986	10.4	950,976	5.5
Essex	498,040	623,255,453	180,290,480	29.0	95,623,680	15.3
Franklin	49,612	64,078,691	17,959,544	28.0	9,525,504	14.9
Hampden	335,496	481,284,511	121,449,552	25.3	64,415,232	13.4
Hampshire	72,801	72,779,457	26,353,962	36.2	13,977,792	19.2
Middlesex	934,924	1,336,912,345	338,442,488	25.3	179,505,468	13.4
Nantucket	3,678	12,180,950	1,331,436	10.9	706,176	5.8
Norfolk	299,426	609,818,777	108,392,212	17.8	57,489,792	9.4
Plymouth	162,311	243,051,511	58,756,582	24.2	31,173,712	12.8
Suffolk	879,536	1,662,226,800	318,392,032	19.2	168,870,912	10.2
Worcester	491,242	542,623,988	177,829,604	32.8	94,318,464	17.4

Hatch Bill Opposed by White House

EXTENSION OF REMARKS

OF

HON. GEORGE H. BENDER

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Wednesday, July 12, 1939

Mr. BENDER. Mr. Speaker, Senator HATCH, of New Mexico, has been recorded as surprised by the favorable response to his proposed elimination of politics from W. P. A. activities. The thousands of newspaper editorials which have offered their support to the Senator's measure have created an issue which can no longer be ignored.

Nor can the sources of opposition to the Hatch bill be dismissed lightly. It is strange to those who have not thoroughly analyzed the inner workings of the New Deal to find that the Hatch bill is not a favorite with the White House. Rumors leaking out of the Nation's Capital indicate that the President finds fault with the efforts of Congress to eliminate politics from the tremendously diversified activities of our W. P. A.

At the instigation of leaders high in the councils of the administration, the House Judiciary Committee was compelled to revise the Hatch bill drastically, eliminating many of its most rigorous safeguards against corruption in relief. As passed by the Senate, the measure banned all administrative employees of the Government from taking an active part in political campaigns or political management. The House committee struck this vital provision from the proposal.

Senator HATCH was moved to protest violently against this elimination. He took the floor of the upper chamber to declare:

The committee's action kills and destroys that vital part of the bill which seeks to ban pernicious political activity of Federal employees. It has destroyed the substance of the entire bill with relation to the political activity of Federal employees generally. This action of the committee presents an open, direct, and positive challenge to the leadership of the Democratic Party. That leadership, having openly declared in favor of those objectives now is confronted with the opportunity of writing its professed beliefs into law. The issue is clear-cut. It cannot be met by any claim of defective language. Hiding behind so-called imperfections of language cannot excuse or justify the emasculation of the substance of the measure.

Shall Federal employees be permitted to engage in political activities?

Senator HATCH inquired.

Shall they continue to control and dominate conventions? That is the issue. It is definitely drawn. Their challenge must be met. Let it be met openly. If the objectives are to be killed, let them die honorably. Let not faith in the purposes of the bill be betrayed by objections to form of language or structure of words. The further progress of the bill will be watched with interest.

Senator HATCH's protest cannot be brushed aside. The Nation is entitled to a definite statement of policy. If W. P. A. workers are to be coerced through subtle influences, if their freedom of choice is to be restricted by the frequently expressed opinions of their supervisors, if corrupt political organizations are to dominate relief agencies, as they have been proven to dominate them in Kentucky, New Mexico, Pennsylvania, and Louisiana, the electorate of our Nation must understand the consequences. If we are to continue to sanction an administrative policy of "tax and tax, spend and spend, elect and elect," the Hatch bill should be defeated. If we are interested in removing corruption from relief policies, the Hatch bill must be restored to its original strength—and passed by Congress.

The White House opposition is deeply significant. Despite its claims to lily white purity, it is still vitally concerned with the placement of its adherents in posts where they may influence thousands of voters. There can be no doubt that this influence frequently borders on coercion and intimidation. Where these cannot be proven, the factor of fear enters to determine voting records. The Nation will not tolerate a plan by which its independence is utterly undermined.

We know why the Federal administration opposes the Hatch bill. Its reasons make its passage, in vigorous form, all the more imperative.

Veterans' Legislation

EXTENSION OF REMARKS

OF

HON. JOHN G. ALEXANDER

OF MINNESOTA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, July 12, 1939

DIGEST OF CHANGES MADE BY SENATE FINANCE COMMITTEE IN H. R. 5452, WHICH PASSED THE HOUSE MAY 1, 1939

Mr. ALEXANDER. Mr. Speaker, the Senate has made several important changes in the very excellent bills—H. R. 5452 and 2296—which the House had passed earlier in the session. By our action Monday of this week we voted to accept these changes, not because we liked them, but in order to eliminate the possibility of a pocket veto of this needed legislation.

In order to present these changes in a clear and concise form, I submit the following digest of the effect of the Senate changes and their meaning:

1. Would provide that if a man dies from a non-service-connected disability and has a service-connected disability of any degree—even less than 10 percent—his widow and dependents would be eligible for benefits just as though his percentage was 10 or more percent. In other words, this bill, as amended by the Senate, does not benefit the veteran but provides for his widow and dependents.

2. Would provide an increase from $22 to $30 per month for the widow of a compensable man who dies from any cause, and for a widow and one child $38 per month, with the present rate of $4 per month for each additional child.

3. The law would be amended so as to make the changes conform with other sections of the amended bill.

It is estimated that 2,900 new cases would be brought in under amendments 1, 2, and 3, at an annual cost of $1,268,000, and that there would be increases to 14,850 widows already on the rolls at an annual cost of $1,426,000.

4. Would provide for the hospitalization and domiciliary care of retired officers and enlisted men of the Army, Navy, Marine Corps,

and Coast Guard who served during the war period on a parity with other war veterans.

It is estimated 140 officers and men would be affected by this provision, at an annual cost of $37,700.

5. Would raise rates of death compensation to dependents of World War veterans whose death is due to service as follows: Widow under 50 years of age, 38; and a widow aged 50 years or over, $45 per month. This would be an increase over the Public, 304 rates of $8 per month for a widow under 50 years, and $7.50 for a widow 50 to 65 years. It would effectuate no change in the rates payable for children or dependent parents. The total amount of compensation which would be payable to widow, child, or children is changed from $75 as it appears in Public law 304 to $83 (the House bill provides $82.50), such increase conforming with the increases in rates to widows. The section further would change the limitation contained in Public Law No. 304 with reference to receipt of insurance payments, to eliminate United States Government life (converted) insurance from the limitation.

It is estimated that these increases would affect 27,800 widows at an annual cost of $2,628,000.

6. Would raise the present statutory award for anatomical loss or the loss of the use of one hand or one foot or one eye from $25 to $35 per month. This allowance is in addition to other benefits the veteran may be entitled to.

It is estimated that this will affect 9,000 World War and 240 Spanish War veterans, at an annual cost of $1,113,000.

7. Would reduce interest charges on loans secured by liens on Government insurance from 6 to 5 percent.

The second bill reported by the Senate Finance Committee would restore to the compensation rolls veterans who were on the rolls March 19, 1933, suffering from paralysis, paresis, or blindness, or who are helpless or bedridden. As in the cases of service connection under statutory presumption, compensation to these misconduct cases would be at a rate of 75 percent of what is paid in directly service-connected cases. Widows and children in misconduct cases in which the veteran has died since the Economy Act or in cases of misconduct in which the veteran dies in the future would be granted the same allowances as go to widows and children of compensable veterans who die from causes other than those for which compensated.

It is estimated that 1,100 veterans would be restored to the rolls under this bill, at a cost of $1,198,000.

Monopoly, the Real Danger to American Freedom, 1776 and Now

EXTENSION OF REMARKS

OF

HON. CLYDE T. ELLIS

OF ARKANSAS

IN THE HOUSE OF REPRESENTATIVES

Wednesday, July 12, 1939

ADDRESS BY HON. CLYDE T. ELLIS, OF ARKANSAS, JULY 4, 1939

Mr. ELLIS. Mr. Speaker, by unanimous consent granted me by the House, I insert in the record an address which I delivered at Springdale, Ark., July 4:

Mr. Chairman and friends of northwest Arkansas, it would be useless for me to attempt to express my sincere appreciation for the high honor paid me by your invitation to deliver this address. I know of nothing that could be more fitting than that the American Legion should sponsor a program of this kind. Those boys who compose the Legion, whether they went overseas or not, tasted the very same hardships and fought to end the same kind of tyrannical aggression that our forefathers tasted and fought for during the American Revolution. No other organization in America has done more in the past two decades for the cause of peace than has the Legion. To them must go much credit for the prevailing sentiment throughout the States against our becoming involved in foreign entanglements. I join with you, the great mass of America, in bidding these boys godspeed in their efforts.

I have come to you to talk plainly on a few subjects. I sincerely hope that no one will be offended because I have chosen this occasion to discuss some controversial matters. I hope no one will interpret anything I shall have to say as political, for I assure you that I shall tackle no proposition but that has both support and opposition in both of the two major parties. It is impossible to discuss the cause of freedom today without pointing out specifically some of the danger signals and it is the duty of every true American, especially on occasions of this nature, to cooperate to the fullest extent in assisting his fellow man to avoid any of the shackles that may be planted in his path.

HISTORY OF THE DECLARATION

Today we have again assembled to celebrate our country's birthday—to pay tribute to those brave and noble members of the Continental Congress who, in the face of marching British Armies, dared to affix their signatures to what fortunately turned out to be a nation's birth certificate, but which might easily have been their own death certificate.

No other great world power has a definite birthday.

It was 163 years ago this July 4 that the Congress met for the second consecutive day to consider and debate the four-page portfolio document which a young, almost unheard-of country lawyer from Virginia by the name of Thomas Jefferson had laid before them.

THE PICTURE ON JULY 4

That we may more fully understand and appreciate the significance of what happened, let us for a moment recall and repaint the picture as they saw it.

Already the war was on. Washington had taken command. Lexington and Concord and even Bunker Hill were history by more than a year. Already everybody throughout the Colonies was reading and talking of Thomas Paine's little pamphlet Common Sense, which clearly stated the American position and arrived at the inevitable conclusion of independence. Already on May 15 Virginia had instructed the introduction of Richard Henry Lee's resolution of June 7 declaring the independence of the States and renouncing all allegiance to Great Britain.

On June 11 a five-man committee had been appointed to draft a suitable declaration on recommendation on the Lee resolution. Lee himself having been called home by the serious illness of his wife, another Virginian—for Virginia, the largest of the Colonies, had assumed the lead—Jefferson, had been assigned to the committee along with Benjamin Franklin, John Adams, and two others who had ignored their assignment.

Who should draft it? Franklin was the most important man in Congress but he had been sick with the gout. Adams had refused because, he said, he had become too "obnoxious" by his clamor for independence. So they had wished the job off on the 33-year-old Jefferson who had been in Congress only a year, and whom Adams later said that he not until that time heard utter three consecutive sentences.

DECLARATION IS DRAFTED AND PASSED

Although what Jefferson considered more important duties had consumed most of his time he had managed to work at his new task a little while early mornings. At last, and with rare judgment and clever literary skill he had amalgamated "the essence and some of the form of three already existing documents": (1) An article from the Virginia Gazette; (2) a paper which he himself had already prepared hoping to get it incorporated into the Virginia Constitution; and (3) the Lee resolution which he had copied word for word.

Then Jefferson had rolled up the four sheets and taken them first to the 72-year-old Dr. Franklin. Franklin in his own hand had interlined five small changes. Then he had gone to Adams and he had written in two more.

It was in the Gazette that Jefferson had found a statement from the Virginia Bill of Rights which he and Franklin had polished into one of the world's most famous pronouncements:

"We hold these truths to be self-evident, that all men are created equal, that they are endowed by their Creator with certain inalienable rights; that among these are life, liberty, and the pursuit of happiness."

How well it would behoove us even today to again revive and reemphasize that great philosophy.

On July 2 the Lee resolution had passed and the next day the Congress began consideration of Jefferson's work of art. To this and to that various Members objected, but Adams always was on his feet in able defense. Jefferson sat helpless, watching the 60 Members in powdered wigs and pigtails mopping their brows and fighting flies, for the weather was hot and the little tormentors from a near-by livery stable were playing havoc with the Members' silk-stockinged legs. Jefferson figured the weather and the flies were on his side.

Among the old letters of John Adams I find one which he wrote to his wife on that first night, July 3, and in it these words:

"Yesterday the greatest question was decided which ever was debated in America; and a greater perhaps never was nor will be decided among men. A resolution (by Lee) was passed without one dissenting Colony that these united Colonies are, and of right ought to be, free and independent States."

Early in the afternoon of the next day, Thursday, July 4, came the climax. Only a few changes had been made—mostly by striking. The eliminations included a bitter denunciation of King George III for engaging in the slave trade among the Colonies and a reference to the King sending over "Scotch and foreign mercenaries to evade and destroy us."

A resolution of adoption was then offered and passed unanimously. The new draft was printed and copies sent throughout the Colonies. On July 8 it was first publicly proclaimed in the statehouse yard in Philadelphia. At noon, by the summons of what now is known as the Liberty Bell, the people were called into mass assembly and the Declaration read. There was wild rejoicing and the ringing of bells continued far into the night—so late that Adams complained about it keeping him awake.

A new nation was born.

Jefferson is supposed to have later explained to Franklin that the reason he was not invited to draft the Declaration of Independence was that they were afraid he could not refrain from putting a joke into it and the Declaration was serious business.

THE DOCUMENT

Jefferson packed this original manuscript away and carried it off to his home in Virginia, where it lay among his files untouched for 47 years "before the country suddenly awoke to the fact that the Declaration of Independence was an imperishable state paper."

At long last, and while he still lived, Jefferson began to receive the acclaim justly due him. I can see him yet, now more than 80, sitting yonder in the shade of the great manse of Monticello, penniless but happy, as once again the newspapers carry "Jefferson" and the "Declaration" in headlines. I can see him proudly fish out once more that little document and deliver it over to his Government to be enshrined forever as one of the masterpieces of the hand of man. And then I can see him once more pick up that old goose-quill pen and feebly revise the wording which he himself had designed for his own tombstone and include therein the words, "Author of the Declaration of Independence."

(Both the original rough draft and the signed copy may be seen today in the Library of Congress.)

And incidentally this recalls one of the strangest coincidences of all time. Of the 56 signers of the Declaration only two of them later became President—Jefferson and Adams—the one who wrote it and the other who steered it through the Congress, and both of these great intellects died on the same day, the 4th of July 1826, the fiftieth anniversary of, as they styled it, "The Unanimous Declaration of the Thirteen United States of America."

THE REVOLUTION—MONOPOLY

Following the signing of the Declaration on August 2 came a great war, for the British would not be convinced. To them it was an economic struggle, their theory being that the colonies existed only for the benefit of the homeland, but to the States it was both economic and political, the American theory being that the people have certain inalienable rights, among which is that they shall have a voice in their own Government. However, both these rights and a flourishing one-sided British trade could not exist simultaneously. One must yield to the other.

The British Crown had merely echoed the voice of the big trading companies. They had in effect driven him to their own destruction, for with the surrender of Cornwallis came the end of their ruthless economic conquest. And with the surrender of Cornwallis and the beginning of a government "of the people, by the people, and for the people" came also agonizing reverberations of the trembling of all the monarchies of the earth.

Neither before nor since, from the dawn of civilization to the present, has there been written such a precious chapter in the constant struggle of common man for his individual freedom and right to happiness. So irresistible was its force that even France and Great Britain soon took their places alongside the United States in the sisterhood of democracies. British Kings learned fast after George III; learned to respect these "inalienable" rights—learned even to respect these early American heroes, for only a few days ago at Mount Vernon we witnessed the almost unbelievable spectacle of King George VI, great-great-great-grandson of George III, laying a wreath on the tomb of Washington.

A NEW ACCOUNTING—NEW DECLARATION

The Declaration was chiefly an accounting—a statement of present deficits in human rights, together with a statement of future balances to be used as the yardstick. Had there been no deficits, there would have been no Declaration.

We of today have accepted this measurement of human standards to the extent that we, too, will fight to retain them. But there is serious doubt whether we have accepted the theory that an accounting is always in order to determine the true status of these rights.

The second paragraph of the Declaration was not only the heart of that document but is the heart of our Constitution and the heart of our system of government. I quote again for emphasis: "We hold these truths to be self-evident, that all men are created equal, that they are endowed by their Creator with certain inalienable rights; that among these are life, liberty, and the pursuit of happiness," and that governments derive their just powers from the consent of the governed. It is not out of order that we stand for a little accounting here this afternoon.

AS BETWEEN THE NATIONS

We think in terms of associations, anyway, so let's first do a little balancing as between the nations:

LIBERTIES

Rights of freedom of speech and of assembly and the right to govern ourselves are yet supreme in America. This is not true among the six other major powers, except in the two democracies, Great Britain and France. In Germany, Italy, Russia, and Japan human liberties have practically been trampled to an irreducible minimum.

So on the side of liberty we show a sizable balance.

PEACE

Let's see where we stand as compared with the six other major powers in our hopes for continued peace. Germany, Italy, and Japan are armed to the hilt and have lost all sense of honor as measured by our yardstick of inalienable rights. Their conduct may mean war for their helpless people any day. France and England are being forced to speed armed preparedness in self-defense. Their people, too, must be ready for the worst any moment. America knows no such fear. Only Russia is safe from conquest, and that only by her isolation. But she, too, would likely be drawn into a continental war.

The economic strain in preparation for war occasioned by the European crisis is terrific.

On this side of the Atlantic there is little danger of aggression. We don't know what it means to fortify a boundary or a port.

So on the ledger sheet of peace we score another huge balance.

ECONOMICALLY

Where do we stand economically? A few simple comparisons tell the story best. For instance, we have 52 percent of the world's supply of coal, 48 percent of the world's supply of oil, and the major minerals in about the same proportion.

In all the world there are only 47,000,000 automobiles, and we have 33,000,000 of them.

In all the world there are 38,000,000 telephones, and we have more than 19,000,000 of them.

In all the world there are 55,000,000 radios, and we have 27,000,000 of them.

By every standard yet devised we are by far the richest and most prosperous of all the countries.

So, as a nation we show overwhelming balances on the side of freedom, safety, and economic security.

AS AMONG OURSELVES

But within our own borders who is free, who is safe, and who is rich? As we have set one nation off as against another, let's now do a little offsetting within.

DEFICITS

First let us examine some of our deficits. Let us see if our national household looks as good to us from within as it looks to some of our neighbors from without.

UNEMPLOYMENT—THE LABORER

Over in the producer's column, the column of labor, we find one man out of four, of those ready, willing, and able to work, unemployed. Worse still he or someone in his place has been unemployed for 10 years. And there are those, those who own the household, who complain if the Government attempts to assist this helpless member of our family and yet who tell him in the same breath, "No; I can't give you anything to do."

In fairness it should be noted that there are approximately as many people employed as in 1929, 33,017,000 as of May this year outside of agriculture, but as people have gone back to work our population has grown and the number of employables has increased; but 13,000,000 men and women unemployed, representing families totaling 40,000,000 needy and destitute red-blooded Americans, hoping against hope—a sizeable nation within itself—constitutes a danger far more serious than any threat of European war; possibly more serious even than war itself. No other major power has so serious an unemployment problem.

It matters not what the cause, whether it be replacement of men by machinery, technocracy, or the curse of monopoly, or what, the condition is enough to challenge the best thought of the land and to stir all men to action.

Admitting that our tangible frontiers are gone, are we willing to admit that we are a static Nation?

THE FARMER

Let us glance for a moment at the American farmer. Conceding that his condition is many times improved over a few years ago, thanks mostly to Government loans, Government subsidies, and Government spending, we must admit it is still bad. Experts have taken as a base the price of farm commodities during the years 1909 to 1914 and have compared those prices with the things he had to buy then, and they call that 100 percent, or parity. But today the prices on what he has to sell are only 79 percent of parity, meaning, of course, that to live as he is entitled to live he must "go in the hole" every year. His capital, if he has any left, including his farm, is still diminishing.

The unemployment situation and the farm situation together have stifled production. You notice you don't hear the term "overproduction" any more; it is now "underconsumption."

CAUSES—MONOPOLIES

Why must all this be? What is the cause?

PACKER, TEXTILE, AND RAILROAD MONOPOLIES

Can it be accident or even the result of the law of supply and demand, for instance, that choice hogs were quoted this morning in each of three great markets of Chicago, St. Louis, and Kansas City as of yesterday's markets at around 7.40 cents, that choice steers were quoted at or near 10 cents, and that this happens every morning of the year?

Can it be accident that all the creameries quoted butterfat today at 18 cents and broilers at 16 cents?

No, indeed. Swift and Armour and a few other big corporations control the monopoly, and they tell you for what price you shall sell your livestock, and then turn right around and tell the consumer what he shall pay for the meat. The profit that once went to the farmer, and that ought to go to him now, goes to the Packing Trust.

Suppose you go down here to a store and spend a dollar of your hog money for a shirt manufactured in St. Louis of Arkansas cotton. The Arkansas farmer, according to figures furnished me by the Bureau of Agricultural Economics, received for the cotton in it approximately 6 cents. Cotton prices are held down by still other monopolies. Who got the rest? Your merchant got a little—very little, perhaps a dime. The jobber may have gotten a nickel. But that still leaves 79 cents. Well, the railroads hauled the cotton

and they hauled the shirt. But the manufacturer got most of it, after paying labor a little. Who owns and controls the big factories? The same people generally who own the packing monopoly. They get you going and coming.

The same people generally also own and control the railroads. And herein lies the secret of our abominable freight-rate structure. These are the same people generally who own and control the industrial Northeast, and naturally they are interested in creating and maintaining any possible advantages for that section. This may help to explain why, if it costs $2, for instance, for a factory in South Bend, Ind., to ship a plow to a farmer here at Springdale, it would cost the farmer here, not $2, but $3.50 to ship the same plow back to the factory over the same road.

In a thousand different ways the process goes on and on, continually sapping the South and West of its purchasing power, and thereby reducing the rest of us to a state of economic slavery.

THE POWER TRUST

One of the most intolerable of American monopolies is the Power Trust with all of its pyramided holding companies.

A few years ago, when the first power lines were constructed, electricity was considered more or less of a luxury. It was all right then to grant an exclusive franchise without limiting the price. But today by our present standards electricty is an essential and every man is entitled to have it in his home at a price that he can afford. But that is not the condition. On the contrary, we find the power monopoly in most every section of the country charging the people about three times what they should be charged for current. Particularly is this true in the South. Representative JOHN RANKIN, who, along with Senator NORRIS, is recognized as the best authority on the power issue, has often stated that, by comparison with the T. V. A. yardstick, consumers of electricity are being overcharged $6,000,000 a year in Arkansas—$6,470,500 in 1937—and $1,000,000,000 a year in the United States.

And right here I want to pause to pay tribute to the Northwest Arkansas Times, of Fayetteville, for its far-sighted editorial contribution to the cause of cheap power in its June 22 edition entitled "Cheaper Rates." I quote from the column:

"In every section where electric power is cheap there has followed a great industrial development and increase in wealth. There are certain sections of the country, notably the big industrial sections, controlled by big businesses that want no more industrial expansion. They therefore fight cheaper electric rates in other sections."

That's the point exactly and the Times deserves the salute of every true patriot. It has fired another volley in the never-ending Battle of Lexington. For who owns and controls the Power Trust?—the same people who own and control the other monopolies of the Northeast. Oh, some will say the people everywhere own the stock. Yes, a little of it; but do they ever vote it? No, indeed. Those once in control vote it, vote themselves huge salaries and perpetuate themselves in office and vote the policies of the companies and the high prices which you pay. Check their boards of directors and you will find the same men on the power boards, the packing-house boards, the railroad boards, and the boards of the other great monopolies—all one network of economic dictators.

The day is at hand when we of the South must rise up as one and put a stop to these blood transfusions to the Northeast.

There must be some reason why America, so far ahead in everything else, should be so far behind in the use of electricity. Today the farm homes of France, of Germany, of Norway, Sweden, and Denmark are 90 percent electrified. The farm homes of Holland and Switzerland are practically 100 percent electrified. The farm homes of New Zealand, a sparsely settled country, are 65 percent electrified. But the farm homes of this great, rich United States are only 15 percent electrified and were barely over 10 percent before the advent of Government-sponsored rural electrification. The trouble is all in the rates, another glaring example of big business unwilling to be satisfied with reasonable profits.

INSTANCES—THE NORTHWEST

It is common knowledge that the great Northwest today is prosperous. This is due to no small extent by its low power rates. The big cities are generating their own power. The city of Tacoma, for instance, with a 110,000 population, has an investment of $26,953,292.51 in its power system. All but $4,563,000 of that has been paid off and by 1951 the city will have it all paid. Now what are its rates? The residential consumer pays for the first 20 kilowatt-hours 4.5 cents per hour but after he goes beyond the 20 hours the current costs him only 1 cent per hour, and after he goes beyond 420 hours it costs him only ½ cent per hour. There is a minimum charge of 50 cents per month. This is even lower than the T. V. A. rate. Now, mind you, Tacoma is producing its own power from a great power dam of its own construction. It will suffice to say that these rates average about one-third of the Arkansas rate. Commercial and industrial rates are in about the same proportion.

MONOPOLY ON AN ISLAND

Suppose we have an island of 10,000 families, each with an average capital of $1,000. It is a typical American community except there is no contact with the outside world. One man owns and controls all the manufacturing plants and fixes the prices, not only on what he has to sell but of the raw products which the people produce. Suppose he taken all the profit and each of the families comes out with $100 less capital at the end of each year. In 10 years it is all gone, gone to the one capitalist and industrialist. The families can no longer purchase and of course can no longer consume. There are no new frontiers. The industrialist must lay off his employees and there is chaos. He refuses to reduce prices and he is afraid to reinvest.

Roughly this has been what has been happening to us, especially during the last half-century. Already it is estimated that 4 percent of the American people own and control 80 percent of our wealth and that 5 percent of the corporations own 85 percent of all our corporate wealth.

WHAT IS FREEDOM?

The American people today are propounding the question of whether these inalienable rights include merely rights of speech and of franchise or whether they really include also the right to live, to "life." Just as the democracies are on trial throughout the world in the courts of public opinion, so also is our capitalistic system on trial in America. All of us hope, of course, that it can be saved, but it cannot survive and continue to employ the tactics of King George III and his trading companies.

BALANCES

Now that we have examined the column of man-made deficits in our economic structure let's look for a moment at the man-made balances. For indeed the horizon is not all dark. Let us examine for a moment our internal balance sheet. America has usually been able to prosper in spite of these great handicaps. Possibly it can again.

NEW DEAL

The theory of the present administration has been to assist principally through a vast program of spending and of internal building. Applying the theory to the island, we find the Government saying there is enough wealth on this island for everybody to have an income and enjoy some of the advantages of our modern civilization; and if you, Mr. Capitalist, are not going to reinvest back with the people the money you got from them, we will levy taxes against you and turn the money back to the masses through a public-works and lending program. But the taxes aren't enough. So the Government says, "Well, we can stand more public debt than we have, so we will just issue bonds for the rest of it; and, of course, you, Mr. Capitalist, will buy them, because you want the interest." Suffering is temporarily abated. But the capitalist still refuses to reduce his prices and take a reasonable profit. So the whole thing must be done all over again tomorrow and tomorrow. Only that part of the program which has added to the permanent wealth will be of more than temporary value. And if the system itself remains unchecked, the same capitalist will eventually get all the money back that the Government spends, just as he did the first time. Would he then not own all the money and the Government debt, too? Could he then be taxed to pay himself off? This, of course, is arguing the point to the extreme, but it does emphasize the problems.

One notable example of internal Government building which strikes at the throat of monopoly is the vast flood-control, power, and reclamation program. It was begun by Teddy Roosevelt with the building of the Roosevelt Dam on Salt River in Arizona. It was given new impetus by the construction of Coolidge and Boulder Dams during the Coolidge and Hoover administrations. It has reached its peak of development during this administration in such projects as the T. V. A., Grand Coulee, Bonneville, Fort Peck, and even the Grand River project, which is within an hour's drive from here.

Through this program it is hoped that we can stop the rapid rush of our soil to the sea which is going at the rate of 200, 40-acre farms every 24 hours. It is hoped that we can make the rivers navigable just as far as possible and develop their recreational possibilities; and last, but not least, it is hoped that we can develop all of the Nation's water power as it is needed and thus conserve for future generations some of the other natural resources that are future generations some of the other natural resources that are going into the development of power. We would all much prefer that power lines, especially on the distribution end, remain in the hands of private owners if they would give us reasonable rates, but this they must do and they must serve all of the people, else their fate will be the fate of the British trading companies.

RURAL ELECTRIFICATION ADMINISTRATION AND NORFORK

Within the next few days we will celebrate here in Washington and Benton Counties the inauguration of a vast rural-electrification program, developing a field that should have long ago been developed by the power companies. It is a great step forward. We have worked out during the present session of Congress the beginning of the development of the White River and it is now certain that within 1 year actual construction will start on the Norfork Dam to our east. This will give us the cheap power that is needed for these lines and the cheap power that is needed by our people in the cities if prices don't come down.

OTHER PROGRAMS

The Government is also endeavoring through vast other programs to assist both the laborer, the farmer, and the little-business man, although we of the South don't agree with all of the methods employed, to earn his loaf of bread and then to get it when he has earned it. The Soil Conservation Service, the Farm Security Administration, the C. C. C., the N. Y. A., the P. W. A., and the W. P. A. are all further examples of governmental efforts designed to restore and reestablish an impoverished people. Certain other efforts, notably the social-security program, have been dismal failures thus far. But they are the beginning and something feasible will no doubt ultimately be worked out.

CONCLUSION

In conclusion, friends, and thanking you many thousands from all over the district for the honor which you pay to me by your very presence here, I would quote you from Thomas Paine's Common Sense of more than a century and a half ago, wherein he said:

"Those who expect to reap the blessings of freedom must, like men, undergo the fatigue of supporting it."

And so we today through our contribution to public sentiment, through the ballot, and through our chosen representatives, each and every one of us can do a great service both to ourselves and to humanity by keeping alive the never-ending battle for freedom, freedom from both political and economic suppression, and by never yielding from this yardstick of inalienable rights so magnificently portrayed in the Declaration of Independence.

Rear Admiral Mark L. Bristol

EXTENSION OF REMARKS

OF

HON. SOL BLOOM

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Wednesday, July 12, 1939

ARTICLE BY LEWIS HECK

Mr. BLOOM. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article, which appeared in the July 1939 issue of the American Foreign Service Journal, written by Mr. Lewis Heck in tribute to the memory of the late Rear Admiral Mark L. Bristol:

[From the American Foreign Service Journal of July 1939]

"High Commissioner. Rear Admiral Mark L. Bristol, U. S. N., August 12, 1919." These brief words in the State Department Register have a particular significance for all who had the privilege of coming into contact with the admiral and Mrs. Bristol during their years in Turkey. The record shows the outstanding nature of the admiral's naval career, but only those who saw him at his diplomatic task from day to day, in a period of great stress and change, can fully appreciate what it meant to both the United States and Turkey to have a man of his caliber at the helm of those troubled years.

The Ottoman Empire was in ruins, and present Turkey was in the throes of emerging from them; rivalries were bitter and acute; other conflicting aspirations rendered any sort of neutral attitude next to impossible; the struggle in South Russia had its repercussions on the shores of the Bosphorus; a new war began between Turkey and Greece; a peace had to be made which fundamentally altered the special situation that had existed for several centuries between the Ottoman Empire and the other powers; a majority in the United States Senate was long hostile to approving any treaty with the new Turkish Republic; and Americans as well as other foreign nationals in Turkey had to become reconciled and finally accustomed to their new status without the enjoyment of the extraterritorial privileges of the capitulations. New Turkey also began, in his days, to undergo the deep reaching changes in its national ways of living which have led to such magnificent results.

In all of his manifold tasks, as the commander of the considerable force of naval destroyers based for several years on Istanbul; as the chief diplomatic representative of the United States; as the protector and guide of the many Americans established or operating in Turkey and elsewhere in the Near East, who included some hundreds of Near East Relief and American Red Cross workers in addition to all the others; as the wise advisor of the Turkish leaders, who knew that while they might have to meet his justifiable criticisms they could count upon his sincere and sympathetic councils; as a fellow naval officer and diplomatic colleague; and most of all as a friend, the admiral unfailingly displayed the characteristics of his warm heart and clear-thinking judgment which endeared him to so wide a circle of Americans, Turks, and others of many nationalities and enabled him to represent his country with so great a measure of success. Rarely does a man of such force of character and determination, make so few enemies—if any did not come to love the admiral they could not help but respect him. It is significant that a man of such outstanding fighting qualities as the admiral should have been president of the American Peace Society at the time of his death, for it exemplifies the widely human range of his many interests in life.

Mark Lambert Bristol was born at Glassboro, N. J., on April 17, 1868. On May 19, 1889, he became an ensign in the Navy, attaining the rank of captain July 1, 1913. At the end of the World War he was in command of the United States naval base at Plymouth, England, and after serving as a member of the Armistice Commission in Belgium in November 1918, was ordered to Istanbul in January 1919 in charge of the United States naval detachment in the eastern Mediterranean. Appointed High Commissioner August 12, 1919, and later given the rank of Ambassador, he served in that capacity until 1927, and then for 2 years was in command of the Asiatic Fleet. He retired May 1, 1932, and resided at his home in Washington, 1621 Massachusetts Avenue, until his death. On June 1, 1908, he married Helen Beverly Moore, of Mobile, who survives him. In addition to many other activities since his retirement, Admiral Bristol took an active part in the raising of funds for the American Hospital in Istanbul, and was to have made a trip to Turkey this coming autumn for the inauguration of its new building.

In addition to his diplomatic duties in Turkey, Admiral Bristol was also called upon while in Far Eastern waters, both in the earlier years of the World War and again in 1927–29, to make use of his real ability for dealing with difficult international situations, and his services in that part of the world were only second in value to his better known achievements in the Near East.

Allowances for Veterans' Administration Employees

EXTENSION OF REMARKS

OF

HON. FRANCIS H. CASE

OF SOUTH DAKOTA

IN THE HOUSE OF REPRESENTATIVES

Monday, July 10, 1939

LETTER FROM THE ADMINISTRATOR OF VETERANS' AFFAIRS

Mr. CASE of South Dakota. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following letter received by me from the Administrator of Veterans' Affairs:

VETERANS' ADMINISTRATION,
WASHINGTON, *July 11, 1939.*

Hon. FRANCIS CASE,
House of Representatives, Washington, D. C.

MY DEAR MR. CASE: This will acknowledge receipt of your letter dated July 5, referring to the matter of allowances for employees, namely, quarters, subsistence, and laundry, with particular regard to making adjustments that would afford relief from charges.

As you know, the Veterans' Administration is interested in instituting policies and in promulgating instructions that will promote better employment conditions.

The optional feature of allowances, as far as employees are concerned, has been given a great deal of study, our objective being to provide for such to the extent permissible. It is considered, however, that the occupancy of quarters should be required to a certain extent. This is not peculiar to facilities of the Veterans' Administration where the nature of operations has caused provision to be made for quartering employees on the station. All of this is understood by an employee at the time he accepts employment with allowances as part of the contract of employment. Nevertheless, it is understood that adjustment will be made as time permits and to the extent provided for.

Effective July 1 employees assigned to nonhousekeeping quarters, who maintain homes in the vicinity of the station for persons wholly dependent upon them, could have the advantage of adjustments, relieving them of the charges for allowances, upon their request. For those in certain positions, however, 40 percent will be required to have quarters assigned to them. According to policy previously in effect 50 percent of the employees in these positions have been subject to this requirement.

In effecting changes under this new policy those who are classified as food handlers will not be relieved of the charge for subsistence, but only for the charge for quarters and also for laundry, if this is provided. It is not felt there is a basis for changing our policy in this respect; it is believed that food handlers should be charged for subsistence. This is the policy followed and accepted in other Government institutions and also in outside institutions.

Further action, however, may provide for changes in the classification of food handlers, which subject is having continued study.

As for the charges for allowances, it is considered that they are equitable. For instance, the rates of $22.50 and $27.50 a month apply to subsistence, for three meals a day with cafeteria and waiter service, respectively. However, as in the past, rates are constantly studied with a view to determine if there should be a revision. In this matter the actual costs are not taken into consideration alone; for instance, besides the actual cost of food, there are service costs, such as preparation and serving of the food, that enter into the charge for subsistence.

It is hoped that the above statements explain satisfactorily the questions that have been raised. I appreciate your interest in the entire subject of allowances, and I will be glad to note your interest in connection with any consideration given the matter.

Very truly yours,

FRANK T. HINES, *Administrator.*

American Freedom—Still Our Most Precious Heritage

EXTENSION OF REMARKS

OF

HON. GEORGE H. BENDER

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Wednesday, July 12, 1939

RADIO ADDRESS BY HON. GEORGE H. BENDER, OF OHIO, JULY 3, 1939

Mr. BENDER. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following address recently delivered by me over the radio:

Ladies and gentlemen, most of us have forgotten the meaning of the Fourth of July in the pleasant sounds of exploding firecrackers.

Yet the Fourth of July is the greatest national holiday in the American calendar. It is a magnificent day in the history of a civilization which has no equal anywhere in the face of the globe. Though it rain in the prairies, though it storm along the Atlantic, the Fourth of July is still magnificent. For nothing can destroy the enthusiasm and hope which are synonymous with an American freedom.

For the last decade, it has become fashionable for pseudo liberals to laugh at those of us who choose to "wave the flag." We have been derided and mimicked by young men who regard themselves as superior to the feeling of patriotism. But on the Fourth of July, no American, no matter what may be his racial origin, no matter what may be his political views, can escape the truth that he is proud of the United States of America in the year of 1939.

We have our problems. We have our troubles; and it would be a foolish man who sought to minimize their importance. For the last 10 years we have been passing through a series of tremendous economic catastrophes. They have taxed our strength. They have cost us billions in terms of dollars. No one knows how much they have cost us in terms of human suffering. Yet we know that the spirit of America has not wavered in the face of the blows we have received. There is still present in our land the courage, the bravery, the energy, and the loyalty which have made this Nation of ours the greatest in human history.

Look about you in the world today. Everywhere we see darkness and chaos. In Asia savage warfare rages on unknown fronts. The soldiers of Japan make war upon those who are their brothers in blood, skin, and even in their basic cultures. On the borders of bleak and barren Mongolia, Russians battle fiercely in unannounced struggles with the warriors of the Mikado. In the Balkans farmers tend their flocks and look fearfully toward the skies for enemy bombers which may spring from the clouds without a moment's warning. Central Europe is a tinder box, ready to burst into flame at any instant. Danzigers walk the streets with mouths closed, not knowing who may be an enemy tomorrow. The Polish Corridor is alive with bristling bayonets; and the armed machines of Germany and France stare at each other from the doubtful shelters of their Siegfried and Maginot lines. In every town and hamlet of the British countryside young boys and girls are practicing the sickening art of gas drills. Old men and women time their speed in reaching the frightful protection of bomb-proof dugouts. The world has gone mad with fright. Men and women no longer reason in terms of human progress across the seas. They have abandoned all pretense of creating human values which will endure beyond the next day's newspaper. Everyone is tense. Men keep on going, moving about like robots, refusing to think of what the morrow may bring.

It is a harrowing picture. And it is not enough that we in America say to ourselves, "Thank God that we live here in our own country." We are fortunate. We are grateful to Providence for the privilege of living within the protective arms of our great country. But we must learn from the experience of those less lucky than ourselves the lessons of preparedness.

This Fourth of July must be a day of rededication. It must be a day when all the citizens of America rise to their feet to reaffirm their loyalty to the traditions which have made this land of ours what it is. As we look across the seas, we know that it is that we have retained in these United States which our fellow nations have lost. More than any other people on earth, we are free. We are free to think, to act, to speak, to write, to do as we choose to a greater extent than any other band of men living in our generation. Of course we are bound by the necessities of life. We must work. We must earn our livelihoods. We must take orders—all of us, from the wealthiest landowner in the Nation to the humblest worker, must take our orders. In that sense, no man is free. But in the right of freedom of expression, we are more wealthy than the owner of the richest factory in all Europe.

Both of our great political parties have accepted as basic, certain fundamental principles. To Republican and Democrat alike, the Bill of Rights is sacred ground. So long as America remains worthy of its name, those rights guaranteed by our Constitution will continue to remain inviolate. When once a political party challenges the validity of our basic freedom, this Nation will cease to be America.

But by the grace of God, we trust and pray that our people will never alter the human guaranties which form our most precious heritage—freedom for all men.

Our people face a danger on this Fourth of July in the year 1939. Everywhere in the world, the poison of hatred which has fouled the air of Europe and Asia is pervading the atmosphere. True Americans must fight this disease. Whether it call itself fascism or communism, whether it take the form of Berlin or Leningrad, despotism and tyranny are still the same. They crush the human soul. They destroy books, art, music. And with the death of all that has been so painfully created by the minds of men since the dawn of culture, there dies the spark of human kindness which makes life worth the living.

Here in our own Nation we have constructed a household reared upon freedom and anchored in the firm granite of tolerance—tolerance to all men who love our country; tolerance to all men who come to us seeking the right to live in peace and happiness. Live and let live in America means, live and help live. Perhaps we are idealists in this great and abundant land. But our ideals are not the barren abstract ideals of the philosopher. We seek to practice them in the daily activities of our lives.

Those ideals are under fire today. Yet, to me, they remain the most noble element of our American civilization. We must labor to rebuild them, to reaffirm them, to train a new generation which will understand them and revere them as did our fathers and their fathers before them.

Education is the safeguard of democracy, now and forever. It is our solemn duty to educate the rising generation to a realization of the meaning of this democracy. It is not enough to teach the glib externals of American citizenship. Our boys and girls may recite with quick fluency the "names and numbers" of the principal actors in the national drama. We must not, we dare not, stop at this, if we are to preserve the democratic system which we love. Our children, and their children to follow them, must understand the meaning of American idealism. It is our task to convince them that human life is not cheap; to make them understand that each of us, no matter what may be his color, his creed, or his origin, stands in the sight of America as a human being worthy of all that life has to offer. The right to life, liberty, and the pursuit of happiness must not be roughly dismissed by our Nation, if it is to remain the citadel of man's freedom when we are gone.

To the fathers and mothers of today, there comes the opportunity to play a glorious role in the determination of the future. We are destined to aid the process of restoring inspiration to American history. This generation, with its growing temptation to rely upon others for assistance, needs more Abraham Lincolns. We need young men and women who will see visions, who will discover new frontiers of science, research, and invention.

The New Deal, for the past 6 years and more, has destroyed the incentive of our people. Republicans are not alone in their assertion, that huge segments of our population have been pauperized by the program created at Washington. Social workers, who come into daily contact with thousands of families each year, will testify to the creation of a new attitude of shiftless indifference in thousands of young people. They have come to tell us, "Why look for work. I know I can't find any. I'll sit home and let the Government take care of me. If they refuse, we'll vote those who oppose us out of office. We'll put in men who will do what we tell them."

There can be no future for a nation afflicted with this mortal disease of self-destruction. Happily there are in our country millions more who refuse to resign themselves to this fate. They know that if they take heart, if they will it, we shall once more become a nation of busy factories, tremendous industries, the America of tomorrow.

On this Fourth of July there are idle hands in America. But there are brave and free minds, too. There are minds which recall that the problems we face are problems made by men. We know that our factories are the most productive in the world; that our natural resources from the Atlantic to the Pacific are still a vast reservoir of wealth; that we can produce in abundance. Men have created the problem of unemployment and those problems which men create, men of good will and courage can and will solve.

We must be grateful on this holiday of our freedom that we in America still have the right to make our own decisions on the manner in which we shall meet our problems. No dictator seeks to direct our thoughts. No tyrant writes the editorials which all of us must read. We bend no knee to an arrogant overlord; our

good-byes to our friends still mean "God be with you"—we need not hail the superman.

Perhaps someone in the wisdom of a great genius might be able to solve every human problem with a stroke of the pen. Our Nation is committed to the belief that no one man may be trusted with such powers. We prefer to "muddle through" by our own free will. A great student of government once wrote, "It is better to govern one's self badly than to be governed well by a master. When the master governs well, all is good, but his successor may be evil, and freedom is at an end."

Americans, wherever they may be throughout the world, must rally to their flag on this Fourth of July. Ours is not the cause of oppression; it is not the love of conquest; it is not the will to hate. We have might; we have strength. Within our armies lies the potential force of a resolute Nation of 130,000,000 men, women, boys, and girls who thrill to the sound of America. Our cannons can roar. Our planes can darken the skies with their wings. We glory in our power. But we do not trust ourselves upon the earth with marching armies. Men need not fear us; for America knows her place in the sun.

Today it is our duty to lead the world in reestablishing the lost hopes and ideals of those who gave us our Fourth of July. No call to war sounds in our ears.

This great day brings us before the Nations of the earth pleading with them to consecrate themselves once more, as One greater than ourselves consecrated Himself almost 2,000 years ago, to the brotherhood of man and the Fatherhood of God.

The world has forgotten tolerance, kindness, justice, and love today. In America, we must educate a generation which will grow to stalwart manhood courageously and honorably to teach the world these forgotten truths. Let us thank those who founded this Nation for teaching us to be free men; free men who are still able to free our brothers in other lands; free men who still teach the lessons of American liberty.

Independence Day Ceremonies

EXTENSION OF REMARKS

OF

HON. MARTIN J. KENNEDY

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Wednesday, July 12, 1939

ADDRESS BY MAJ. GEN. HUGH A. DRUM, UNITED STATES ARMY

Mr. MARTIN J. KENNEDY. Mr. Speaker, each year this celebration is sponsored by the Society of Tammany and is the outstanding patriotic celebration of its kind in the United States. On the occasion of this celebration we find assembled outstanding figures in the religious, civil, military, and public life of the community paying tribute to the Society of Tammany, in addition to their brilliant speeches on the traditions of Independence Day and the patriotism of our people. This year, before a large and enthusiastic audience, the following address was delivered by one of our distinguished military officers:

ADDRESS BY MAJ. GEN. HUGH A. DRUM, UNITED STATES ARMY

In the history of our country, Independence Day, General Washington, and national defense have become synonymous terms. They exemplify a fundamental national policy in a metaphorical sense for General Washington not only led the forces which secured our independence, but placed in our Constitution, and advocated thereafter, the basic principles of national defenses, which have always appealed to the farseeing of our citizens. The duty of all citizens to participate in the common defense of the Nation, and adequate provisions for standing armed forces with reserves of munitions, and the maintenance of military training schools were embraced in General Washington's primary doctrines for the security of the Nation. Consequently, it is a pleasure and honor for me to represent the national-defense phase in your celebration of the one hundred and sixty-third anniversary of Independence Day and of the inauguration of General Washington.

The basic conceptions of the Society of Tammany or Columbian Order have accorded with General Washington's policy of national defense. Your organization has responded in a specially high degree to all defense demands of the Nation and you have fostered and protected the national principles which insured our people the liberties won by the Revolutionary War and later embodied in our Constitution. The early members of your society fought for these causes and handed down a heritage in this respect which the society has always cherished and maintained. Therefore, there is little need for me to discuss with this audience the cause of national defense. You appreciate its value and necessity. However, in these days of international turmoil—when some nations seek conquest by force, and others are on the brink of war—it is well for us to reflect on Washington's teachings and take stock of our national-defense goods or forces.

During the Revolutionary War some 400,000 men were called to the defense of the Colonies; yet the largest army ever available for Washington's command numbered 17,000. Washington said, "There is every reason to believe that the war has been prolonged on this account. Had we kept a permanent Army on foot, the enemy could have had nothing to hope for, and in all probability would have been willing to come to terms long since."

In 1812 over 500,000 men were mustered into and rapidly out of the American Army, yet the new Republic was barely able to avoid national disaster at the hands of some 20,000 British regulars.

In the two foregoing instances, the short terms for which soldiers were enlisted prevented their becoming trained, and, consequently, they were not effective against the enemy. No well-trained and soundly organized army has anything to fear from a poorly organized and inadequately trained force, regardless of its size. You have but to analyze our Revolutionary and War of 1812 forces, in comparison with the opposition of the Chinese Army against Japanese aggression, and you will realize the truth of this conclusion.

Prior to our entry into the World War, reliable authorities advocated organizing an army of 500,000, claiming the existence of such a force would surely keep us out of the war. Eventually we mustered about 4,000,000 men and suffered great losses.

Notwithstanding our oral acceptance of Washington's advice, advance preparation for defense has always been neglected in the hope that our desire for and the cause of peace would prevail. In the international situation today, involving the creation of the largest armed forces ever known, we are face to face with this same old national-defense question, will we organize and strengthen our defenses in the hope of preventing our involvement in war, or will we, as in the past, drift along with a weakness that invites war? Wisdom and experience of the past have led the administration to face this question, and this Congress has authorized funds for marked improvements in our armed forces. Let us discuss briefly the nature and adequacy of the improvement contemplated by these authorizations.

In the beginning, let us recognize these basic factors which influence our defense considerations: First, our problem is peculiar unto itself and has no parallel in Europe or Asia; and, second, while the main reliance for defense is the manhood of a nation, the munitions of war have been greatly improved since the World War and will play more important roles in another war—they require a more highly trained and skilled military personnel and a greater production capacity than in the past.

In the former consideration we should realize that modern communications and war weapons have destroyed the isolation we enjoyed in the past. While the Atlantic and Pacific are still serious barriers, the modern airplane and fast surface vessels of today have diminished these advantages and drawn us in closer contact with possible enemies. At the same time, those great water barriers resolve our defense requirements into more definite approaches in comparison to those faced by the land-locked nations of Europe and Asia. Therefore, we should not be too prone to adopt blindly foreign solutions and methods, rather to solve this problem in the light of our own peculiar situation.

On the other hand, modern communications and weapons, especially the airplane, have antiquated our old conception to the effect that our defenses can be limited to our shore lines and borders. The field of operations, the area of defense, has greatly broadened and must now be measured by the radius of action of the modern military airplane if we are to prevent serious bombardment of our cities, and so forth.

Germany, Russia, France, Italy, and England, in Europe, and Russia and Japan in Asia are within short air range of each other. Whereas under present airplane development a hostile air force of any of these nations is incapable of reaching us without first securing an air base within the range of a combat military airplane, say, a maximum of 1,200 miles, or approaching our shores in airplane carriers or other forms of floating aviation bases.

However, in the light of recent aviation developments, such possibilities present serious problems in our defense considerations. With 1,200 miles as a radius, draw on your maps arcs of a circle, centering one in western Alaska, one in Hawaii, one in Panama, one in Puerto Rico, and one in our northern and one in our southern Atlantic coasts. You may, then, visualize the possibilities of hostile land air bases.

In these respects, then, are found the fundamental reasons for an important change in our conception of the defense requirements of the Nation. We must discard the old theory of shore line and border defense and accept as our first concern the problem of denying to an enemy land for air bases within operating range of our shores and borders and of preventing airplane carriers approaching within similar range. Failure to provide the forces and means to meet these requirements will expose our people and property to untold hardships and losses and seriously handicap our war industries and the creation of larger armed forces.

However, in considering this situation do not be misled into believing that the airplane alone will defeat this Nation, nor any other nation that is able to put a trained and well-equipped army in the field.

This broader field of defense operations is too complicated for a comprehensive discussion in these remarks. A general picture of a solution is all that I will attempt.

In the first place, an efficient fleet and an adequate Army air force provided with outlying bases in Alaska, Hawaii, Panama, and Puerto Rico, and bases in the North and South Atlantic States, all well defended by an active Army, are essential. These forces would be capable of operating jointly in either ocean. Moreover, the Army air force should be available for operations in one ocean when the fleet is engaged in the other while it is in transit through the Panama Canal. At the same time we must recognize the inherent inability of fleets and air forces to seize and hold land areas. This limitation demands that a well-trained and completely equipped field force be constantly in existence and immediately available to seize and hold any sea, air, or land base from which hostile forces can operate against us. The speed of modern war does not afford time to organize such forces after hostilities are begun. They must be available in peace, well trained and equipped for immediate action. The additional land forces should be Regular Army troops, ready to fight at the "drop of a hat."

Back of these outer defense units there are required forces essential for local interior defense to meet hostile raids—hit-and-run attacks along the shore and borders—antiaircraft and coast-defense units and mobile ground-army elements, composed mainly of National Guard units.

The forces just enumerated are the minimum essential for the initial phase of defense. Under the cover and delaying action afforded by outer defense units, time may be gained for the creation of such larger forces as the special situation may demand. The Organized Reserves will here come into play, provided our industries are tuned to the production of adequate supplies and equipment.

In the last few years, especially this year, such progress has been made in meeting the material-defense requirements enumerated. Our fleet is in excellent shape. Available funds and authorities exist for a suitable expansion of the Army Air Corps, which may be culminated in the next 2 years. Funds have been made available for storage of essential raw materials and to develop industrial mobilization. More modern weapons for the ground army are being produced and the defenses of outlying bases are to be improved, while the National Guard is being supplied additional men and weapons to round out its combat organization. Bear in mind, however, that except for the fleet, most of these improvements have just been started and can hardly be accomplished under 2 years.

These are real advances and reflect great credit on the administration which has had the foresight to get them under way. However, a further step is required to provide the ground forces in the Regular Army, well organized and trained and immediately available, which will be essential to supplement the other outer defense units in denying an enemy land areas from which his air forces may operate against our mainland. The nonexistence of a well-organized and trained Regular Army field force for this purpose is our greatest weakness in this scheme for outer defense units—our primary defense forces.

Potentially, the United States is the most powerful nation in the world. The Army has potential soldiers of high intelligence. The Nation leads the world in industrial efficiency. We are virtually, though not completely, assured an independent source of essential raw materials. If all national-defense plans aim toward securing supplies to arm and equip our potential manpower, and we are given the opportunity to properly train these men, then we stand among the great military powers of the world. To realize this potential, the critical items of munitions must be available in times of peace and men thoroughly trained in their uses. Adequate reserve supplies available from an industry educated in peacetime to the requirements of an emergency, while essential to adequate national defense, are of no avail unless placed in the hands of trained men, led by skilled leaders.

In the air, on the ground, the Nation needs, and should plan to secure, the essential requirements for adequate national defense. These plans should accept one criterion which establishes the general principle of all defense needs. That criterion is—there can be no substitute for security. The principles of American security are established in the basic law of the Constitution. I quote from that document: "We, the people of the United States, in order to form a more perfect union, establish justice, insure domestic tranquillity, provide for the common defense, promote the general welfare, and secure the blessing of liberty to ourselves and our posterity, do ordain and establish this Constitution for the United States of America."

Above all other reasons, which support our need for adequate preparedness, stands this definition of our concept of government. And with this purpose no citizen can find just complaint. Within the framework of the Constitution the Supreme Court has announced a far-reaching interpretation of the relations between each American citizen and his Government.

I quote from an opinion rendered by Mr. Justice Butler: "Government, Federal and State, each in its own sphere, owes a duty to the people within its jurisdiction to preserve itself in adequate strength to maintain peace and order and to assure the just enforcement of law. And every citizen owes the reciprocal duty, according to his capacity, to support and defend government against all enemies."

And at no time in our history has the need for mutual understanding of these reciprocal obligations between our citizens and our Government been more evident than it is today. If we are to preserve our democracy, these obligations must be willingly accepted. If we are to have the privilege of immunity from the havoc of war, we must accept the responsibilities to provide adequately for our national defense.

Standing as we do today upon the eminence of 163 years of the growth of our Nation, we can look back the way we have come and see now more plainly than ever before the significance of Independence Day in 1776. The Declaration of Independence changed the front of the universe and set the torch of liberty so far in advance of tyranny that on our shores it shall never be extinguished. Our children are heirs to all that the victory of independence has secured. As we go up the slope of centuries the richer becomes this inheritance. As members of the great American community it is our patriotic duty to appreciate, guard, and defend the heritage that our fathers won and our children shall inherit.

Neutrality and Immigration

EXTENSION OF REMARKS

OF

HON. A. LEONARD ALLEN

OF LOUISIANA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, July 12, 1939

ADDRESS OF STEPHEN F. CHADWICK, NATIONAL COMMANDER OF THE AMERICAN LEGION, BEFORE DEPARTMENT CONVENTION, SUMMER OF 1939

Mr. ALLEN of Louisiana. Mr. Speaker, the veterans who went to Europe and saw the animosities and hatreds that have been engendered there by over a thousand years of fighting over boundary disputes, minority questions, and similar issues came back determined that America should not again take part in such. These men fully realize that we need less of Europe's troubles, and they are therefore well prepared to speak upon such paramount questions as neutrality and immigration. We should have strict neutrality to keep the United States out of Europe and we should have fewer immigrants from Europe to keep Europe out of the United States.

Under leave to extend my remarks, I quote below a portion of an address by Hon. Stephen F. Chadwick, national commander of the American Legion, delivered at the Twenty-first Annual Convention of the Louisiana Department, American Legion, held at Alexandria, La., on June 16, 1939, on the questions of neutrality and immigration:

My comrades of the American Legion, ahead of me there is the opportunity and the privilege of visiting some 15 of the department conventions before many of us will meet again in Chicago for what I hope may be one of the greatest patriotic demonstrations the United States has ever seen.

By vote of the delegates of this department, and happily by vote of the delegates of all departments of the American Legion, which practically became an acclamation, I was given last fall the serious responsibility of leading the American Legion in one of the most significant years, I think, of its existence. We met in Los Angeles at a time when disaster had struck in the New England States. We met at a time when, in the Old World, Germany was moving upon Czechoslovakia—at a time when persecution was rife in some parts of the Old World. It was then that the thought was suggested that Great Britain might be giving up its mandate in Palestine—a time when the force of the American Legion was sought to be enlisted by many of our own citizens to assert itself on one side or the other side of some of the great problems of the day.

The American Legion, however, followed a different course than that which was suggested by the advocates of intervention on one side or the other. The Legion was imbued with the ideas essential to the perpetuity of this America of ours, and one of them was the idea expressed in our determination to follow the wisdom of our fathers given to us by our first President, George Washington, and given again to us by President Monroe, when he pronounced the doctrine that we have come to know as the Monroe Doctrine, containing as it does two important implications. One was that, as our fathers had come to this continent to establish a new nation, conceived in liberty, we wanted none of the Old World's interference with either our ideologies, philosophies, or even our boundary disputes. Part and parcel of that doctrine, an essential implication of it, was our desire to have Europe avoid interference with the American continents.

We told Europe that we would not concern ourselves with their age-old disputes over boundary lines and political ideologies. The American Legion consists very largely of men who have seen foreign

service—very largely of men who went into a war imbued with a great thought given them by a great leader—"a war to end war" and "to make the world safe for democracy."

In that war, injecting ourselves, if you please, to a degree into the affairs of Europe, we discovered that we could not drive our political philosophies down the throats of other peoples by the bayonet. We entered the war primarily because our rights upon the high seas had been transcended, and we gave a good account of ourselves. But the broader concepts that we took to Europe were lost in the rivalries that existed around the peace table, the desire that existed there to hold advantage and to avoid the nineteenth clause of what was the Versailles Treaty. That clause assured to the nations that they would have an opportunity to come and sit down and readjust any mistakes that might have followed as a result of the peace which was written at Versailles.

We saw those struggles going on. We came home, and we have sought to tell the American children just what these children who appeared before us a short time ago have told us. We sought to tell them of the greatness of America, and how it might continue to be a Nation living in peace if it would not concern itself with Old World problems, ideologies, struggles, and strifes, that have been going on for 2,000 years.

We on this continent have demonstrated that people of every race, religious concept, and circumstances of birth can live together in peace. If we have failed in our demonstration of that fact, then there is only one resort, and that is to surrender the job to someone who still thinks that he can do a better job of it than we can. We do not subscribe to the thought that there is any individual dictator, that there is any class upon the face of the earth, that can do any better job of it than we, the American people, can and will do.

So we have followed a course this year consistent with our mandates, keeping away from every suggestion that was made that we stick our nose into the affairs of Europe, or undertake to advise the people of Europe. Until, out of appreciation of our example, they can come to our way of life, we elect to preserve it and to be successful right here at home.

The mandates given to me by that national convention in Los Angeles have been the subject of some little dispute in some respects among some of our members. A great body of the American Legion has been substantially unanimous in sustaining and maintaining every one of the mandates given me. There are two, however, which required some discussion. When they have been discussed I have found that even those who thought they differed with the American Legion began to realize the wisdom of our course. I refer particularly to those which concern immigration, and those which concern our opposition to the Ludlow amendment.

OUR POLICY ON IMMIGRATION

Let me first discuss with you the position of the American Legion as it concerns immigration. We came back to this America of ours, forming this great organization, at a time when the country was engaged in its greatest industrial development. We saw that the time was present when many of those who had come to America had failed to grasp our concepts and our ideals; had failed to understand and know the genius of the American system of government. Their hearts and their minds were still in the Old World. They were sending their earnings back to the Old World. They were leaving us to go back there and live in affluence. They saw America only as a gold mine, only as a place where they might pan a pocketful of gold and leave us. We said that we wanted a restriction on immigration, and we accomplished it by a quota basis. We were a vital force in accomplishing that policy.

In 1929 we saw a period when the industrial development apparently had got out of bounds, and thousands upon thousands of men who had enjoyed work over a period of years were thrown out of employment. This was a period of depression. Agricultural prices were down. We were told that there were people living and producing on submarginal lands. We were told that an adjustment of our agricultural population would be required, and we have gone on for almost 10 years with millions of our people unemployed.

During the same period, there have been circumstances in Europe which have torn at the heartstrings of every good American citizen, particularly at the heartstrings of those of us who saw foreign service and know that the apparent heart of the ruler is not the heart of the people themselves.

But we have said that we must take care of our own first. We cannot let down the bars of immigration to this Nation of ours while millions of our people who want to work are out of employment. Whatever the condition of the heart may be, the opportunity has been here for 150 years for people to come to America, and now we find a condition in America where we have to readjust our own situation or democracy may fail because of that gnawing of an empty stomach, which knows no reason.

We were approached with the proposition that we should admit 20,000 refugee children. The thoughts and sympathies of our hearts are with those children. But what is in the proposed solution of their distress? It constitutes an opening wedge to a change in our immigration policy by allowing to a most-favored-nation an opportunity to send to us some of those they desire to be rid of. If we start with one, then we must continue with others. If we start such a movement in this instance, we are some 20 years late.

My mind goes back to the waif children of Russia and of Siberia, who were running the alleys, living out of garbage cans like so many human dogs. There was no similar cry in this country to save them. We must, if we adopt that policy, adopt it out of the great American heart, but can we afford to do it at this time?

We, of the American Legion, have been concerned with the welfare of American children for a period of 17 years. We have been concerned that every American child should have a sound body, and in that body, through education, should have an opportunity to have a sound mind. We know, because of our work that has taken us out to the tar-paper shacks on the garbage dumps of America, that there are thousands of American children who are not having that opportunity today. If those who want to make a public display of their largesse want an opportunity to do it among the American children, let them come to the American Legion, and let us, with our auxiliary, take them and show them the opportunity that exists right here at home to give opportunity to an American child.

Washington, D. C.—Its History, Problems, and Its Future

EXTENSION OF REMARKS

OF

HON. JENNINGS RANDOLPH

OF WEST VIRGINIA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, July 12, 1939

ADDRESS BY ROBERT V. FLEMING, OF WASHINGTON, D. C.

Mr. RANDOLPH. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following interesting and informative address delivered by Robert V. Fleming, president of the Riggs National Bank and local civic leader, at the Willard Hotel this afternoon at the District Day program of the Rotary Club of Washington, D. C.:

I am sure you will all agree with me that our president and board of directors have selected a most fitting subject for discussion at today's meeting. The Washington Rotary Club, constituted as it is as a cross section of the outstanding business leaders of this community, has a very vital interest in all things pertaining to the District of Columbia.

There was a time when our city was a small village that it did not occur to those domiciled here to take an active interest or part in the affairs of local government. But as we have grown, and in all probability will continue to grow, being one of the largest cities in the United States—and one of the most important, at this stage of the world's history—it becomes increasingly imperative that all of us take a deep and sincere interest in the affairs of our community. In my judgment, it is particularly appropriate that the Washington Rotary Club, in collaboration with other business organizations, such as the Washington Board of Trade, should have a complete understanding of the formation of our Government and its problems. I am quite sure that an organization such as this, with its mottoes, "Service above self" and "He profits most who serves best," is peculiarly well fitted to take a fair and impartial view of the complex problems which, from time to time, confront a community government such as ours, which has no parallel certainly within the United States and, in all probability, in the world.

You will realize that in the short space of 20 minutes which has been allotted to me it is not possible to do more than give you a brief picture of the District of Columbia, its government, and its problems. Therefore, let us first examine a little of the background of the reason for the creation of the District of Columbia and the location of the Federal city here.

When our Nation was an infant among nations and our Capital was in Philadelphia the pressure from the discontented was so great that it became apparent to President Washington that there should be a Federal city, where the Congress could meet and deliberate without interference from State governments and their residents. So, under the acts of July 16, 1790, and March 3, 1791, the District of Columbia was established by authority of section 8 of the first article of the Constitution of the United States.

Subsequently, on March 30, 1791, arrangements were effected to create the District of Columbia, the States of Maryland and Virginia each ceding certain portions of territory on either side of the Potomac River so that 10 square miles were set aside as the seat of the Federal Government. The landowners dedicated property for streets and avenues and certain additional lots which were sold off by the Federal Government; the proceeds, supplemented by cash grants made by the two States, being used to assist in the erection of the Federal buildings.

An interesting feature of the construction of the Capitol, which will be noted by a visit to the Senate and House Chambers (and which I have been told did not occur by accident) is that no provision was made for windows in these spacious meeting Chambers. This was done so that the Congress in its deliberations would not be distracted or influenced by the shouts and clamor of the mob. Of course, at that time our forefathers did not envision the development of the press, the organized picketing, and the dissemination by telegraph and radio of every piece of news concerning every happening in the Congress such as now takes place.

In 1846 Congress retroceded to Virginia that portion of land which had been ceded by it. The District of Columbia, as now constituted, consists of slightly over 69 square miles, and when water is eliminated, slightly over 60 square miles of territory.

We have had several forms of government. First, we had a mayor, appointed by the President of the United States, and a city council, elected by the people of the city. In 1871 our government was changed to consist of a governor and a legislative assembly, at which time the District had a Delegate in the Congress. However, this latter form of government did not last for long; in fact, but for 3 years.

It was in June 1874 that our present form of government was created, providing for three Commissioners, all appointed by the President, two to be civilians, each with actual residence of 3 years, and one an officer of the United States Army with the rank of captain, or higher grade, having at least 15 years in the Corps of Engineers.

Under our existing form of government the Congress of the United States sits as our legislative body. Up to the present time the Commissioners have enjoyed only limited authority beyond that vested in them by specific acts of the Congress. As we have grown we have found that every move that must be made in the operation and management of this community government first must be submitted to the appropriate committees of Congress. It will be noted at once that this puts an undue burden on the Congress, as well as prevents prompt and efficient functioning on the part of department heads in many matters. Inasmuch as we are the seat of the Federal Government, coordination with its activities is essential, but the gentlemen who serve on these important committees in Congress, in addition to their responsibility for legislating for us, have obligations to their own States and communities.

The difficulties incident to handling even the most minor matters have resulted in surveys being made from time to time to see how this situation might be improved. The Commissioners themselves took the initiative by selecting a group of citizens to serve as the Citizens' Efficiency Committee. Recently that body made a careful study and rendered two reports to the Commissioners, and through the Commissioners to the Congress. Still more recently we have heard of another report, known as the Griffenhagen report. All of these efforts have had for their objective the desire to ascertain whether or not our form of government could be brought to a point where it might function more easily and smoothly while keeping pace with our growth.

One of the principal differences between the report of the Citizens' Efficiency Committee and the Griffinhagen report was the question of the commission form of government as against that of the city-manager type. Under the commission form, in effect here for so many years, we have not been troubled with the difficulties and the unhappy occurrences which have taken place in many other communities in the Nation. Furthermore, the Engineer Commissioners have brought to our government a degree of engineering skill which probably could not be obtained otherwise without tremendously increasing costs, for all of the engineering work is handled by the Engineer Commissioner and his assistants, who are appointed from the Army.

In the Griffinhagen report, as originally presented, the concept was that we should abolish the commission form of government and for it substitute a city-manager form. Let me point out that where city managers are functioning in various cities throughout the United States they are accountable to the city council, which, in turn, is elected by the people of the community. If their services are not adequate or efficient, the people have the right to make changes in the council, and through the council to replace the city manager. Under the original Griffinhagen proposal the city manager, while appointed by the President of the United States, could only be removed for cause, and, therefore, would not in any way come under the supervision of the people whose governmental affairs he would be administering. It has been found throughout our government that it is a good thing to have more than one in deliberation before steps are taken in the management of the affairs of the people.

Both the Citizens' Efficiency Committee's and the Griffinhagen reports agree on quite a few points, such as the departmentization of the local government and the vesting of greater authority in the Commissioners in the handling of affairs, without reference to the Congress except, of course, in connection with certain matters where legislative authority of Congress should not be disturbed.

Having served on the Citizens' Efficiency Committee, I am convinced from the personal study I have made of the situation that we would make a grave mistake to change our commission form of government. I do feel very strongly that the Congress should give the Commissioners broad administrative powers in order that they may adequately and smoothly handle the governmental functioning of a great city like ours.

I see no objection to the proposal that an additional official, such as a business manager, be appointed to assist the Commissioners in coordinating the work of the various departments. The ramifications of government have multiplied and become so complex that this additional official would in all probability increase management efficiency and expedite the handling of local governmental matters.

For quite a few years, in one capacity or another, I have had an opportunity of pretty closely observing the high-grade type and the loyalty of our District officials and department heads. They are a fine group of public servants, and we should lend them all support and assistance and cooperate with them in our common problems.

Respecting some of the problems which confront our community, let me touch briefly upon that involved in the cost of running the local government. To begin with, as the District of Columbia was acquired to provide a home for the Federal Government, industry has been discouraged and our main business is that of supplying necessary goods and services to the local population. Private industries are not only restricted as to admission but edifices constructed for business purposes must conform to limitation designed to preserve the beauty and dignity of the Federal city. This brings about an economic condition quite different from that prevailing in communities where industry and manufacturing is encouraged by every means known to their citizens. It has a distinct bearing upon the ability to take care of the cost of servicing a modern community.

Another factor is the problem of tax-exempt property in the District. All Federal property, of course, is exempt from taxation. On account of its being the seat of the Federal Government, large areas of ground are owned by religious and other eleemosynary institutions which are likewise exempt. I am not questioning the justice of this, but I do point out that our taxable area is limited to begin with, and there is a tendency already on the part of people to seek homes in suburban areas, probably accelerated by good roads and cheap automobiles. Again, this has a bearing on our economic position.

For instance, according to latest figures obtainable, taxable and exempt property in the fiscal year ended June 30, 1938, had a total valuation of approximately $1,983,000,000. Eight hundred and twelve million dollars was exempt from taxation, of which total $649,600,000 was owned by the United States, $62,350,000 was owned by the District of Columbia, and slightly over $100,000,000 was owned by others. The Federal Government has been growing rapidly, and its housing needs have resulted in larger and larger areas being taken from that subject to taxation. In fact the total estimated taxable and exempt property has increased in value from June 30, 1930, to June 30, 1938, but 12 percent, whereas the total exempt property has increased in the same period 38 percent. When you take into consideration that throughout the whole United States the largest source of revenue is derived from taxation of real estate, it will be readily seen what confronts us here.

In 1920 the total appropriations were $20,129,000, and for the fiscal year ended June 30, 1939, $49,150,000. Where does the money come from with which to meet these expenditures? First, we must divide the appropriation into two parts—special funds, in which revenues are segregated to meet expenses, and the general fund, from which all other operating costs of Government must be paid.

The special funds are highway, water, and miscellaneous trust fund appropriations, and while the cost of defraying these activities are all arrived at through taxation, these revenues cannot be diverted to meet the general expenses of the District. Therefore, if we eliminate these special funds, taking the fiscal year 1939 as an illustration, we find that the general fund items amounted to $39,340,000, whereas the special fund items amounted to approximately $9,800,000. Assessed at the rate of $1.75, $20,750,000 is estimated to be realized from real-estate taxes, while receipts from tangible-property tax, levied at the same rate, totaled $1,425,000, and from the intangible personal property tax, $2,875,000; from business-privilege tax, including certain license fees, $2,200,000, and from tax on utilities, banks, building and loan associations, etc., $2,600,000. These are the principal items, the remainder being derived from estate and inheritance taxes, personal tax on motor vehicles, and other miscellaneous sources, plus a Federal payment of $5,000,000 toward defraying the expenses of the District.

A word with respect to the Federal payment. Originally, 50 percent of the expenses of operating the District were borne by the Federal Government; later it was changed to 40 percent, and in recent years it has averaged 18 to 20 percent of the general fund. To be more specific, the Federal payment in 1920 was $9,953,000, when the total appropriations of the general fund were $19,000,000, as contrasted with the $5,000,000 payment against general funds of over $39,000,00 in 1939.

When we talk about repealing certain taxes and substituting others, it should be borne in mind, for instance, that when we repeal the intangible tax and the business-privilege tax about $5,000,000 in revenue must be made up. Therefore, you can see how important it is to hold down expenditures. There are many things we would like to have, but certainly we must live within the limits of our ability to raise money, unless greater sums are appropriated by the Federal Government toward the expenses of the District.

I have heard many people say, "Why can we not get rid of this or that tax"? When we do that, we must find something to substitute for it, and we must be careful that in doing so we do not occasion too great a disturbance to our economy. No type of taxation is pleasing to everyone. Nobody likes to pay taxes. But if we want things and want our community adequately and efficiently serviced, we must all bear our share of the load with, of course, proper help and support from the Federal Government in view of the very reason for the creation of the District of Columbia as the home of the Nation's Government.

We hear a great deal these days about the question of substituting an income tax in lieu of other taxes to be repealed. Again, we must examine the economic position of the District when we talk about imposing an income tax. I am satisfied that Congress does not want to dry up this community by having its people seek residence elsewhere. We have no large industries or manufacturing enterprises from which spring revenues that can be tapped. Our main industry is that of the Federal Government and the servicing of the Federal Government.

Dr. Pond and Mr. Stam in their report to the Congress last January, pointed out clearly the difficulty of raising any appreciable sum from an income tax to be imposed here in the District of Columbia. Let me quote from that report: "The effect of Federal salaries on the distribution of incomes in the District is worthy of note. These salaries are concentrated to an extreme degree around the $2,000 mark. Data on 93,047 full-time, regular, and permanent positions in executive departments in Washington for 1937 indicate that 86 percent receive salaries below $3,000. If the line be drawn at $4,000, the percentage rises to 93. Between $1,200 and $2,700 lie 80 percent of all these employees."

Therefore, we must recognize that should the Congress determine to eliminate certain taxes and substitute an income tax in the District of Columbia (apparently not desiring to give consideration to a sales tax, which Dr. Pond and Mr. Stam believe to be an ideal form of taxation for this community, supplemented by an income tax) only a very moderate amount can be raised from this source without occasioning grave consequences to the Federal City and its growth and development.

I have tried to give you a picture of some of the problems confronting this community. Many individuals and organizations, being greatly interested in their particular project (and I say this without criticism) in making appeals to the Congress for appropriations apparently have not examined the entire economic picture and structure before making such requests.

Expenditures must be held down, otherwise the city which we all love so much, and of which every American should be proud, is bound to run into problems which will be very difficult of solution. Our existing problems and those which unquestionably face us in the future are many, but with the proper cooperation between our citizens and the Congress of the United States, I am confident the growth and development of the Nation's Capital will continue.

I am sure that each and every one of you experiences the same feeling I do whenever I arrive in Union Station on my return to the city, and start for my office or my home. It is a feeling of great satisfaction to be once more back in my native city.

W. P. A. Salaries

EXTENSION OF REMARKS

OF

HON. GEORGE W. GILLIE

OF INDIANA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, July 12, 1939

ARTICLES AND EDITORIALS FROM THE FORT WAYNE (IND.) NEWS SENTINEL

Mr. GILLIE. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following newspaper articles and an editorial from the Fort Wayne (Ind.) News-Sentinel, which are self-explanatory:

[From the Fort Wayne (Ind.) News-Sentinel of May 10, 1939]

MARTIN AND GILLIE DEMAND WORKS PROGRESS ADMINISTRATION PAY-ROLL LIST

WASHINGTON, D. C., May 10.—Representative JOSEPH W. MARTIN, Jr., House minority leader, and Representative GEORGE W. GILLIE, Fort Wayne, joined yesterday in demanding on the floor of the House that "the high salaries in Works Progress Administration" be made public.

Speaking in support of a resolution which would force Col. F. C. Harrington, Works Progress Administrator, to withdraw the veil of secrecy surrounding the salaries of Works Progress Administration officials, Representative MARTIN charged that the Works Progress Administration "fairly reeks with inefficiency, corruption, scandalous waste, and un-Americanism."

Taking the floor a moment later, Representative GILLIE asserted that it was "difficult to believe that information of this type, which should be available to the elected representatives of the people, is being withheld by officials of the Works Progress Administration."

Gillie's resolution was referred to the House Committee on Appropriations, which is conducting a widespread investigation of Works Progress Administration activities.

The resolution was inspired by Colonel Harrington's refusal to make public the names of noncertified Works Progress Administration employees in the Fort Wayne district for the reason that "such information subjects the individuals concerned to embarrassment."

[From the Fort Wayne (Ind.) News-Sentinel of July 5, 1939]

VICTORY FOR GILLIE

WASHINGTON, D. C., July 5.—A victory in his fight to force the Works Progress Administration to make public the salaries of W. P. A. bosses has been scored by Representative GEORGE W. GILLIE, Fort Wayne Republican.

Through the combined efforts of Representative GILLIE, Senator RUSH HOLT, West Virginia Democrat, and Representative JOSEPH MARTIN, Jr., House minority leader, a provision was written into the 1939 relief bill compelling the W. P. A. Administrator to reveal the names, addresses, and salaries of all relief bosses earning more than $1,000 a year.

Representative GILLIE first called attention to the fact that such information was being withheld several weeks ago when he introduced a resolution in Congress providing that the salaries of noncertified W. P. A. employees be made public.

The Fort Wayne Congressman had drafted the resolution after Administrator F. C. Harrington refused to supply him with such a list for the Fourth Indiana District on the grounds that it would "subject the individuals concerned to embarrassment."

The resolution was endorsed by Representative MARTIN, House Republican leader, and was included in the relief bill which the President signed June 30.

The salary lists are expected to be made public within the next month.

[Washington newspaper dispatch of July 10, 1939]

SALARIES OF W. P. A. BOSSES BARED

WASHINGTON, D. C., July 10.—While thousands of needy and hungry W. P. A. workers, many with large families, are being discharged from $50-a-month jobs in Indiana because of "insufficient funds," an army of 700 political bosses remains on the pay rolls at salaries totaling around a million dollars a year, according to official W. P. A. figures made public for the first time this week.

Thirty-three of these lucky relief bosses, who share in the juicy political plums scattered throughout the Indiana pay-roll lists, receive salaries of between $3,000 and $8,000 a year. Their average monthly check is about $300—approximately six times as much as the rank-and-file W. P. A. worker receives on a project.

More than 150 of these relief elite, who owe their jobs to political pull, receive pay of $2,000 a year or more.

Three hundred and forty-four draw an aggregate salary of $685,000 a year—or enough to keep 13,700 W. P. A. workers on the job, and off the dole for 30 days, or feed and clothe more than 1,000 W. P. A. families for a year.

SALARIES LISTED

It is interesting to note that in Indiana, which has played a prominent part in the series of State W. P. A. scandals, the juiciest plums were distributed in Indianapolis, stronghold of the McNutt-Minton-Townsend political machine.

Here are a few of the salaries paid to Indianapolis officials:

John K. Jennings, administrator, $8,000; Stanton T. Bryan, deputy administrator, $4,800; Martin K. Madden, director of finance, $4,800; Raymond L. Pike, director of operations, $4,500; Edmund H. Kassing, assistant director of finance, $4,200, and Mildred E. Schmitt, State director, $3,900.

In addition, four Indiana W. P. A. officials receive salaries of $3,600; 1, $3,400; 8, $3,300; 1, $3,200, 3, $3,100, and 10, $3,000.

The salary list was made public only after a long fight in Congress which culminated last week when a provision was placed in the 1939 relief bill forcing the W. P. A. Administrator to publish the names, salaries, and voting addresses of all relief bosses earning more than $1,000 a year.

[From the Fort Wayne News-Sentinel]

SOFT JOBS FOR POLITICAL FAVORITES

That sustained W. P. A. employment of the needy is not incompatible with reduced relief appropriations is well evidenced by Representative CHARLES A. HALLECK'S listing of Indiana W. P. A. employees receiving salaries of $100 a month, or more, as of June 1, 1939. He shows, from Government records, that $685,160 a year is distributed among 344 political favorites running the W. P. A. show in this State, the average salary amounting to $166 a month, a goodly number receiving $275 a month, and not a few receiv-

ing from $300 to $400 a month. The same situation prevails all over the country. And yet when Republicans vote for reduced expenditures, the political masters of the W. P. A. high command answer, not by cutting the pay of their darlings in the fat jobs but by dishing out handfuls of "403" lay-off slips to the destitute rank and file.

Analysis of H. R. 5452

EXTENSION OF REMARKS
OF
HON. EDITH NOURSE ROGERS
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Wednesday, July 12, 1939

LETTER FROM CAPT. THOMAS KIRBY

Mrs. ROGERS of Massachusetts. Mr. Speaker, under the leave to extend my remarks in the RECORD, I am delighted to present the following letter I have received from Capt. Thomas Kirby, national legislative chairman, Disabled American Veterans of the World War. Captain Kirby is always so helpful in making these analyses of veterans' measures. He is always on the job. His long experience in veterans' legislation makes such an analysis a document worth preserving. I was disappointed that the House bill did not go further in its provisions, and my first thought was that it should go to conference, but with adjournment impending it is perhaps better to accept what has been passed, rather than risk a Presidential veto or perhaps deferred action until the next session. Personally, I would like to see Congress stay in session all summer, so that important measures like this one and the neutrality bill might be given the consideration and thought to which they are entitled.

JULY 10, 1939.

The Honorable EDITH NOURSE ROGERS,
House of Representatives, Washington, D. C.

MY DEAR MRS. ROGERS: This complies with your request that I furnish you with an analysis of H. R. 5452 as passed by the House, amended by the Senate, with the House today concurring in the Senate amendments and with the expectation that the bill as amended will meet with White House approval.

It is estimated that the bill as passed today will bring direct benefits to approximately 55,000 veterans and their dependents at an annual cost to the beneficiaries of $6,500,000.

The broadest section of the original House bill which was eliminated by the Senate would have granted 10 percent compensation to about 85,000 men with recorded wounds but whose disabilities were too slight to entitle them to compensation. However, the bill as passed today grants the dependents of any man with a service-connected disability of even less than 10-percent benefits, regardless of the cause of death. While, of course, there will be no official interpretation of this measure until after it has actually become a law, it would seem that practically all of the tens of thousands of slightly wounded men will be entitled to at least 1-percent disability. Therefore, one of the effects of today's bill would be to grant dependency allowances to the widows and children of slightly wounded men, regardless of the cause of the veteran's death.

Our digest of the law follows:

1. Would provide that if a man died from a non-service-connected disability and has a service-connected disability of any degree—even less than 10 percent—his widow and dependents would be eligible for benefits just as though his percentage was 10 percent or more.

2. Would provide an increase from $22 to $30 per month for the widow of a compensable man who dies from any cause and for a widow and one child $38 per month, with the present rate of $4 per month for each additional child.

3. The law would be amended so as to make the changes conform with other sections of the amended bill.

It is estimated that 2,900 new cases would be brought in under amendments 1, 2, and 3 at an annual cost of $1,268,000 and that there would be increases to 14,850 widows already on the rolls at an annual cost of $1,426,000.

4. Would provide for the hospitalization and domiciliary care of retired officers and enlisted men of the Army, Navy, Marine Corps, and Coast Guard who served during the war period on a parity with other war veterans.

It is estimated 140 officers and men would be affected by this provision at an annual cost of $37,700.

5. Would raise rates of death compensation to dependents of World War veterans whose death is due to service, as follows:

Widows under 50 years of age $38, and a widow aged 50 years or over $45 per month. This would be an increase over the Public 304 rates of $8 per month for a widow under 50 years, and $7.50 for a widow 50 to 65 years. It would effectuate no change in the rates payable for children or dependent parents. The total amount of compensation which would be payable to a widow, child, or children is changed from $75 as it appears in Public Law 304 to $83. (The House bill provides $82.50) such increase conforming with the increases in rates to widows. The section further would change the limitation contained in Public Law No. 304 with reference to receipt of insurance payments, to eliminate United States Government life (converted) insurance from the limitation. It is estimated that these increases would affect 27,800 widows at an annual cost of $2,628,000.

6. Would raise the present statutory award for anatomical loss or the loss of the use of one hand, or one foot, or one eye, $25 to $35 per month.

It is estimated that this will affect 9,000 World War and 240 Spanish War veterans at an annual cost of $1,113,000.

7. Would reduce interest charges on loans secured by liens on Government insurance from 6 to 5 percent.

The second bill in which the House today concurred with the Senate amendments (H. R. 2296) would restore to the compensation rolls veterans who were on the rolls March 19, 1933, suffering from paralysis, paresis, or blindness, or who are helpless or bedridden. As in the cases of service connection under statutory presumption, compensation to these misconduct cases would be at a rate of 75 percent of what is paid in directly service-connected cases. Widows and children in misconduct cases in which the veteran has died since the Economy Act or in cases of misconduct in which the veteran dies in the future would be granted the same allowances as go to widows and children of compensable veterans who die from causes other than those for which compensated.

It is estimated that 1,100 veterans would be restored to the rolls under this bill at a cost of $1,198,000.

Deeply appreciative of your cooperation, and with kindest personal regards,

Cordially yours,

THOMAS KIRBY,
National Legislative Chairman, Disabled American Veterans of the World War.

Only One Answer

EXTENSION OF REMARKS
OF
HON. GEORGE S. WILLIAMS
OF DELAWARE
IN THE HOUSE OF REPRESENTATIVES
Wednesday, July 12, 1939

EDITORIAL FROM THE WILMINGTON (DEL.) JOURNAL-EVERY EVENING

Mr. WILLIAMS of Delaware. Mr. Speaker, under the leave to extend my remarks in the RECORD, I include the following editorial:

[From the Wilmington (Del.) Journal-Every Evening of July 5, 1939]

ONLY ONE ANSWER

As Congress reconvenes today after the long holiday week-end and resumes consideration of President Roosevelt's new $3,860,000,000 spending-lending program, there are two facts that stand out in bold relief.

One is that the Federal Government has just ended another fiscal year with a tremendous deficit. The total this time was $3,600,000,000—twice that of a year ago. Altogether, in 9 consecutive years of spending more than it takes in, the Government has rolled up an accumulated deficit of $23,500,000,000.

The other is that Congress, with all of the major appropriation bills now approved, has authorized expenditures for the new fiscal year of $13,110,000,000. This, the largest peacetime total in history, is $1,749,000,000 more than last year's aggregate. It insures that the Federal Government a year from now will be counting up its tenth consecutive deficit and one even vaster than the one just marked up.

How any man or any legislative body could seriously contemplate another spending program totaling nearly $4,000,000,000 in the face of these facts and this record passes all comprehension.

If the Federal Government, in President Roosevelt's opinion, was "on the road toward bankruptcy" on March 10, 1933, after 3 years

of deficits, where does he think it is heading now? Those deficits were small, compared to the ones for which the New Deal is responsible. They were caused, not by a violent expansion of spending, but by a sharp contraction in Federal revenue during the early depression years. If we were still spending at the same rate now, with present revenues we should be marking up surpluses instead of $3,000,000,000 deficits.

There is only one explanation and that is that the Roosevelt administration has no other answer but spending and more spending to the serious problems which continue to confront us. Six and a half years of its policies finds the country still saddled with more than 10,000,000 unemployed. Industry and business still lack their normal vigor after all the billions that have been poured out to prime the pump. The country is anxious and discontented; the next Presidential election is only a year ahead. So the order has gone out once more to speed up spending in the hope immunity from economic and political disaster can be purchased for another year at the expense of the taxpayers and the Government's financial stability.

This is a gambler's choice. If Congress has any sense of responsibility at all it will refuse to be a party to a scheme which leads directly to more debt and deficits on top of the sorry total we already have.

The Railroads Do Not Come Into Court With Clean Hands

EXTENSION OF REMARKS

OF

HON. FRANCIS D. CULKIN

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Wednesday, July 12, 1939

A DISCUSSION OF THE LEA AND WHEELER BILLS BY RAYMOND G. CARROLL

Mr. CULKIN. Mr. Speaker, the future of America depends upon the continuation of a free press, untouched by sordid or other influences. The influence of the press on the continuation of free government and a sound economic dispensation depends in turn upon the ability and patriotism of those who write for the press. I know of no more useful citizen than the newspaperman who daily tells the public the story of what is going on at Washington and elsewhere, and does so impartially, without fear or favor.

During the last several years of my service here I have been blessed by contacts with several newspapermen of this type. One of the most outstanding of these is Raymond G. Carroll. Mr. Carroll is blessed with a splendid intellect and has been a close student of the passing scene for the last quarter of a century. He has held positions of high trust and importance in the newspaper field; was a war correspondent during the World War; and has been a friend of Presidents, kings, and of all the eminent men in public life and private industry who have trodden the stage for many years last past. Like all real newspapermen, Mr. Carroll is at the same time an excellent economist and historian. His sword knows no brother where vital principles are at stake. This is true of the present unholy attempt of the railroads to take over water transportation, the first and last line of defense of the consumer, farmer, and industrialist in this field. I asked Mr. Carroll to give me a statement of his views on this question, and he has embodied it in the following communication, which I trust every Member of the House who is looking for light on this matter will read and ponder.

Pursuant to the permission of the House, I append hereto Mr. Carroll's communication:

WASHINGTON, D. C., *July 4, 1939.*

Hon. FRANCIS D. CULKIN,
Committee on Rivers and Harbors,
House of Representatives, Washington, D. C.

MY DEAR JUDGE CULKIN: The following résumé of facts is designed to clarify the major issues involved in the controversy of the railroads versus the waterways:

HOW THEY STARTED

Simultaneously with the Federal effort to bind the Union into an unbreakable unit, there came the change in water traffic that brought hope to inland America. Nicholas J. Roosevelt, of New York, sailed from Pittsburgh in the autumn of 1811 in his steamboat *Orleans* (or *New Orleans*) and heralded for the upriver towns the dawn of a new era. Roosevelt's boat was an object lesson and a precursor of an inland trade along the waterways of the Nation. In 1825 the Erie Canal, connecting the Great Lakes with tidewater, was opened.

Ground for the Baltimore & Ohio Railroad was broken July 4, 1828, by a surviving signer of the Declaration of Independence, Charles Carroll of Carrollton. The Baltimore & Ohio and the South Carolina railroads were the first of consequence in the United States. The early railroads, almost without exception, were as local as the turnpikes had been. Where there was already a profitable traffic, it was profitable to project a railroad.

SINS OF THE RAILROADS

Remember this: Antedating and running parallel with the railroads in construction and operation have been the waterways, with a decided difference. The waterways have been honestly built, wisely administered, and have not been touched with the breath of scandal. To pass them to the railroads as is the ultimate consequence of the pending transportation bills (H. R. 4862 and S. 2009) is giving the lamb to the wolf.

For the railroads have a history that reeks with scandalous acts. But, keeping to temperate words, the railroads, as is now generally accepted as truth in all quarters, have suffered extremely in past years through short-sighted or misguided financial control, which has manifested itself in stock bonuses, underwriting commissions, and overcapitalization, all of which have constituted an unwarranted drain upon the railroad operating revenues.

"For I, the Lord thy God, am a jealous God, and visit the sins of the fathers upon the children unto the third and fourth generation" (the Holy Bible, second commandment, Exodus 20: 5).

"The gods visit the sins of the fathers upon the children" (Euripides, Greek philosopher, Phrixus, Frag. 970).

So in both Christian and pagan warning the story of the American railroads is told.

It is of sobering significance that from a sorrowful and soiled past that cries to heaven, the railroads have learned nothing.

To secure new revenue to meet the mounting charges upon an astounding overcapitalization, and for this alone, the railroads, now bolder and more sinful than ever, seek by all means, fair or otherwise, the increase of their revenue, even to the extent of destroying and rendering useless thousands of miles of inland and coastal waterways built with the people's money at a cost of hundreds of millions of dollars.

WASTING $100,000,000

To particularize in terms of the present: The Seventy-sixth Congress has already voted nearly $250,000,000 for the navigation, flood-control, and power development of the Nation's inland and coastal waterways. It is to be chiefly spread over the Mississippi, Missouri, Ohio, Hudson, and Columbia Rivers, with an allotment to the Great Lakes watershed and to the intercoastal waterway system on the Atlantic seaboard.

A justifiable prophesy, based upon events in the past, is that the strictly navigation portion of the current rivers and harbors appropriation, a sum of nearly $100,000,000, will have been thrown out of the window by the same Congress that voted it should the highly objectionable features of the pending transportation bills be retained and made law.

These objectionable features are that part of the bills which puts the waterways of the Nation under the complete control of the Interstate Commerce Commission, that Federal agency made by and exclusively for the railroads and upon which the waterways have no representation.

FATE OF THE ALABAMA RIVER

Lest we forget Lochiel's warning that "coming events cast their shadows before," it is well to recall that Congress not so long ago was making appropriations for the improvement of the Alabama River. The United States Government had expended upon the Alabama River millions of dollars to make its navigation safe and attractive.

There had once been a thriving competition carried on by steamboats on the Alabama River, even as now exists in the various inland waterways of the Nation.

To head off the Alabama River steamboat competition the Louisville & Nashville Railroad made an arrangement with the surviving steamboat company by which the steamboat company advanced its rates to those charged by the railroad and then was paid a certain amount each year as "minimum freight charges," whether it carried any freight or not, an inviting formula for the future of all waterways. It was Montaigne who said, "Whoever has sufficiently considered the present state of things might certainly conclude as to both the future and the past."

However, in this first stage of the navigation suppression on the Alabama River there was public hostility to the river-railroad deal, for after a time a new steamboat company was formed and it began to carry actual freight at actually reduced rates.

The Louisville & Nashville Railroad made short work of this. With its steamboat satellites, it cut rates until the rival had been ruined and then restored the old rates.

Another rival steamboat line appeared, but was more adroitly managed. It allowed itself to be absorbed at the cost of an increase in capitalization, which was passed on to the shippers.

For some years quiet reigned on the Alabama. Then another band of what the railroad termed "troublemakers" started a new competitive line. The Louisville & Nashville found a man ready to put the newcomers out of business and advanced the necessary money to him on his notes. He built some steamboats and ran

them at nominal rates until he had ruined the competitor. Eventually the Louisville & Nashville charged off his notes as worthless and the cost of the killing off of competition went into the railroad's capitalization and was paid for in the stocks and bonds sold to the public.

Thus the Louisville & Nashville Railroad killed navigation on the Alabama and made the expenditures of the United States Government there all waste and useless. Then the Louisville & Nashville Railroad petitioned the same United States Government for leave to increase its rates, having thus destroyed water competition. And the United States Government through the Interstate Commerce Commission granted the rate increase.

Nice work by the I. C. C., the same body which under the pending transportation legislation will secure arbitrary powers over all the waterways in the United States. Only instead of being the invisible "stooge" for the railroads in the waterway wrecking the I. C. C. becomes the visible nemesis of the waterways by raising their rates and thus liquidating them.

NO "ACHIEVEMENT" TO DESTROY

The whole philosophy patter heard from those behind these transportation bills is that the legislation in its practical political aspects will take rank as a "major achievement of national importance."

Note the word "achievement." It is no achievement to destroy or to plan destruction. To arrange for the elimination of low-cost transportation to pay for the past fictitious, fraudulent, or superfluous capitalization of the American railroads is hardly an achievement that Congress will be proud to pass on to coming generations. It is scarcely an achievement to tear down what has been carefully built up since the birth of the Republic. The synonym of achieve is to fulfill or to complete; in short, to carry on in a worthy manner. An achievement or accomplishment is a result or feat attained by meritorious effort.

GOING BACK INTO RAILROAD LORE

It is fitting and proper to state some pertinent examples of railroad methods. The story is not a pleasant one and its telling anything but an agreeable task. Still it is all here in the records of the United States Government, from which a few facts have been taken verbatim with or without quotation marks.

Going back to their infancy, the railroads have been extremely favored, more so than any other industry. This consideration has been repaid by the curious habit of never returning what had been obtained from the public. The entire yield of vast promotions over a century in time is all there now in some form of railroad securities. The farmer and the city dweller alike strive to pay off the mortgage. The railroads never pay back what is loaned to them, except to double or quadruple the indebtedness.

Consider a man who enters a new town, buys a corner lot for $50, and opens a drug store. In 10 years the increase in the population of that town has caused his lot to enhance in value to $500. Nobody would dare to suggest that this man has any right to charge more for his prescriptions, soda water, fountain drinks, or proprietary articles because his lot is worth more.

But in the same decade we will say that the value of some hypothetical land owned by a railroad had mounted from $1,000,000 to $10,000,000, and this $9,000,000 increased value had been floated up into a national capitalization of stocks and bonds.

The railroad appears before the Interstate Commerce Commission and complains that on this increased capitalization it cannot with its present rates and tonnages earn the interest and dividends.

Hence it must increase its rates and absorb other tonnages than it possesses, if that can be arranged. Why not absorb the tonnages of the waterways? The waterways have been built with public money, either State or Nation, and there are no worried stockholders and bondholders to organize lobbies to come to Washington and to protest or to stay home and send telegrams to Congressmen to help save their securities.

For that reason, if for no other, it would appear to be the sacred duty of Congress to defend the waterways, and before authorizing a new control over them at least ascertain whether they are to be passed into safe hands.

"The voice is Jacob's voice, but the hands are the hands of Esau," it might be quoted with respect to the Interstate Commerce Commission. The I. C. C. is the proven front for the railroads. Of this there is no doubt.

But going back into railroad lore.

LAND GRANTS PAID FOR THE RAILROADS

During the 20 years following 1850 the United States Government made extensive land grants to American railroads to aid in their construction—to the amount of 305,114 square miles. This is equivalent, approximately, to all the area east of the Mississippi River and north of the Potomac and the Ohio Rivers with the exception only of the States of Wisconsin and Michigan.

More specifically and in detail, here are some of the railroads that profited:

	Land grant, in acres
Atchison, Topeka & Santa Fe	17,425,300
Central Pacific (Southern Pacific)	9,379,140
Chicago, Burlington & Quincy	3,408,046
Chicago, Milwaukee & St. Paul	4,222,137
Chicago & North Western	4,415,447
Chicago, Rock Island & Pacific	1,228,526
Chicago, St. Paul, Minneapolis & Omaha (Northwestern)	2,645,320
Grand Rapids & Indiana	954,373
Choctaw, Oklahoma & Gulf (Rock Island)	838,400
Illinois Central	3,920,848
Missouri, Kansas & Texas	1,121,784
Mobile & Ohio	3,920,848
Northern Pacific	43,893,728
Pere Marquette	589,290
St. Louis, Iron Mountain & Southern	3,498,578
St. Paul, Minneapolis & Manitoba	3,770,532
Seaboard Air Line	1,034,220
Southern Pacific	14,351,587
Union Pacific	19,144,394
Wisconsin Central	1,232,562

The unfortunate feature of this land-grant policy was that these great subsidies were diverted from their original purpose in many instances to the enrichment of a few financial adventurers.

The values of the extensive area of lands granted were capitalized and distributed in the form of securities to the railroad stockholders. In other cases the values or income-producing power of the land was capitalized. A few railroads, such as the Northern and Southern Pacifics and the Santa Fe, retained very valuable holdings of timber and minerals, despite the stipulation that such lands be sold to settlers in small tracts. They have been distributed to stockholders or are now among the assets of these transportation companies. The Southern Pacific alone in 1914 was estimated to have oil and timber holdings ranging in value from $100,000,000 to $700,000,000, which was reported to the I. C. C. at a book value of slightly more than $40,000,000.

One authority states that at the average price most of the railroads have received for such of these lands as they have sold, the money value of this gift from the United States Government is more than $1,000,000,000, "and amounts to about one-ninth of the actual capitalization of the railroads with the water squeezed out."

STATES ALSO MADE GRANTS

The figures so far given cover only the Federal land grants. They do not include grants made by the States. Texas, which controlled its own public land, has given to the railroads some 32,400,000 acres. Minnesota has regranted from general Federal grants to the State 2,850,077 acres of swamplands to the railroads. Florida received a swamp grant of 20,000,000 acres from the Federal Government, and up to 1910 its regrants to the railroads, canals, and drainage companies and compensation to State agents for selecting lands had absorbed about 12,000,000 acres. Michigan also granted large areas of swampland to the railroads. This is shown in the report of the United States Bureau of Corporations on the lumber industry.

RAILROAD PROPAGANDA OMNIPRESENT

Liberal-minded Congresses have pampered and coddled the railroads from the time of their first construction to date and there is no other business in the world that depends so much upon public-relations men and their propaganda—a recent instance being the claim set up that in return for land grants the railroads gave the equivalent in free transportation to Government officials and others.

While there has been no official inquiry into the total cost of railroad propaganda, an estimate made by a private survey is that it is sufficient to build and equip a new transcontinental line between the two seaboards of the country. No other propaganda is so deftly and subtly handled as railroad propaganda, and it operates 365 days of the year, year in and year out. It is omnipresent and most industrious.

Sins that happened one-half or three-fourths of a century ago must not be referred to, we are being told. The sins of the railroads should be forgotten, is the wail of the propaganda machine.

In truth, because of their continuing and recurring character, the sins of the railroads are as fresh today as flowers just blown. It is on account of these overlapping sins the railroads seek new victims to devour or, in the case of the waterways, old victims to redevour.

It must not be forgotten that in the East the first big railroad promoters did not put their tracks into areas that were without transportation. The railroads reached out along the rivers and canals. The sides of the early canals were hardly carpeted with grass when they were sprinkled with the soot from locomotives. Their first tonnages were taken by the railroads from the untaxed currents of the rivers of the country and the State- and Federal-owned canals.

Before the stationary engine was adapted into the locomotive it was already operating steamboats upstream; in 1807 Robert Fulton's *Clermont* conquered the fall of the Hudson River.

That the waterways have been able to survive rail competition is proof of their worthiness and need to the country, railroad propaganda to the contrary notwithstanding.

WHAT PRICE THE RAILROAD AGE?

From the reports of the United Pacific Railway Commission and the Wilson committee of the United States House of Representatives on the affairs of the Credit Mobilier may be gained a picture of the resourcefulness and ingenuity displayed by the railroads in extending their grasp on the public domain, especially when a scrutiny is made of the procedure followed by certain of the transcontinental companies in the administration of the subsidies obtained from the United States Government. In fact, the methods pursued in the construction of the Pacific railways are typical of the manner in which the bounty of the Government intended for the support, development, and insurance of the financial strength of these corporations was filtered into the pockets of a few favored officers and managers who used their powers as directors and trustees for their own personal advantage.

Between the years 1865 and 1869 the United States Government loaned its credit to six companies forming parts of a great scheme of transcontinental communication. From the act of July 1, 1862, it appears that Congress contemplated that five lines would start from points on the Missouri River, viz: Sioux City, Omaha, St. Joseph, Leavenworth, and Kansas City, and that they would converge on the one-hundredth meridian, forming a trunk line which would be built westerly. It was also contemplated that the Central Pacific line would start from the Pacific Slope and would meet the Missouri railroad near the California line. Subsequently, Ogden was made the point of junction.

It was originally provided that the Government lien should be a first mortgage on the several lines, but the law was subsequently amended so as to allow the companies to issue their own bonds to an equal amount as a first mortgage on their railroads, the Government advance being secured by a second mortgage.

The Government loaned bonds bearing 6-percent interest, payable in 30 years, to the amount of $64,623,512 and stipulated to pay the interest on these loans upon condition that at the maturity of the bonds the aided companies would pay both principal and interest, and that upon completion of the roads the companies would pay annually a percentage of their net earnings and a portion of their compensation for Government transportation on account of these annual advances made by the Government. Congress also gave them over 26,000,000 acres of public lands, upon which they had realized up to December 31, 1886, $39,479,213, with 12,615,087 acres of land, valued at $26,054,270, yet unsold, making the total land grant worth $65,533,483.

As the Government annually paid $3,877,410 in interest to the holders of the subsidy bonds and did not require repayment by the companies until the maturity of the principal, the companies gained a further advantage in the use of such interest money. This advantage was worth $199,790,250 at the time of the grant. The Government gave them a right-of-way 400 feet wide along the length of their lines, the right of eminent domain, and a space for depots and turn-outs.

The report of Robert Pattison, chairman, United States Pacific Railway Commission, further shows that in addition to liberal gifts by Congress some of the States and many counties and public bodies also made large donations in lands and bonds to some of the companies.

The aid given to these companies amounted to $447,729,470. The total loan by the Government in principal and interest payments amounted to $178,884,759 toward the repayment of which the companies in 18 years accumulated only $30,955,039.

In the case of the Union Pacific, the cost of the road was about $50,000,000, which cost was wholly reimbursed from the proceeds of the Government bonds and first-mortgage bonds. From the stock, the income bonds and land-grant bonds, the builders received in cash value at least $23,000,000 as a profit. After all is said, it was the United States Government that built the railroad.

DAYLIGHT LET INTO FINANCING

The Hadley Railroad Commission, 1910, filed with the I. C. C. some interesting unpublished data, and it is also valuable to scan the proceedings of the United States Labor Board, Chicago, 1921, document No. 353, employees' exhibits Nos. 11, 12, 13, and 13a.

Here in musty records, daylight is let into the financing costs of railroads. The study of the securities issued during all or a part of the period 1900–1919 by 21 representative railroads of the entire United States, including eastern lines, shows that the transportation companies considered gave away during the period under review, in the form of bonuses to stockholders and discounts and commissions to banking houses on funded-debt securities, the sum of $498,240,886.

The inquiry also summarized its probe further by the statement that during the period 1910–19 alone 13 railroads distributed to banking syndicates through their methods of marketing securities the sum of $51,663,000, involving an annual loss in revenue of $2,683,150; that special stock bonuses aggregating $233,559,000 were issued by 5 other railroads, representing, at 5 percent interest, an additional annual loss of $11,677,950; that more than $18,000,000 was being disbursed each year on fictitious securities issued by 11 companies alone, and that other losses of $123,000,000 were incurred by 3 railroads, representing an annual loss to these companies of $6,150,000.

In other words, excluding fictitious capitalization, this restricted study of a number of eastern and western railroads during the period 1900–1919 alone showed that their resources were unwisely dissipated to the amount of $408,222,000, constituting an annual drain of approximately $40,000,000 upon their operating performance.

It was also shown that 10 western railroads alone, during the limited period 1900–1910, gave away in stock bonuses more than $250,000,000, and paid underwriting fees and brokers' commissions on a flotation of bonds in the sum of $19,197,000, and that the annual losses to these 10 railroads as a result of these practices was $11,651,000.

As to fictitious capitalization, this study also cited, among other numerous instances, the case of a representative eastern railroad which had been burdened with a free stock distribution of more than $56,000,000 as the result of an early consolidation of its constituent properties. The cash dividend upon this watered stock for 50 years preceding the study aggregated 286.5 percent. This was equivalent to an average of $3,261,993 per year, or a total of $163,099,650 for the 50 years actually paid out by the company on stock which was issued prior to or at the time of the early consolidation and which did not represent any addition to the physical property or earning assets of the company.

CREATED THE "GREAT HOLE"

Other instances of the causes of railroad deficits through sinful deeds of the past might be cited. Put together the stock bonuses and the underwriting commissions made the overcapitalization, which, like the house that Jack built, created the "great hole" through which millions, yes, hundreds of millions, of dollars' worth of railroad revenue poured and is still pouring.

The moral to be drawn from this astounding railroad record is plain: Why should the Seventy-sixth Congress place a new temptation to grab and demolish the Nation's waterways within reach of such organized, extensive, and proven indifference to the public welfare as has been shown again and again by these so-called great railroads?

The tonnages the railroads hope to divert from the waterways through the planned increase of the waterways rates are not required to meet operating expenses, but they are sought to help fill the "great hole" of annual expenditures caused by the overcapitalization of bygone years.

This contemplated raiding of the tonnages of the waterways is most unjustified when one considers that since the formation of the Reconstruction Finance Corporation in 1932, the railroads alone have borrowed from that single Federal agency approximately $650,000,000 of which about $200,000,000 has been repaid. All has been swept down the yawning gullet of the "great hole," and the vast sluiceway will stay there until through ultimate necessity the hole is plugged up—a job in railroad financial surgery awaiting some future Congress.

NONTRANSFERABLE TONNAGES

If the pouring of the revenues of the water-borne tonnages into the treasury of the new railroad monopoly about to be created would accomplish the rehabilitation of the railroads this raid upon the waterways of the Nation might deserve some consideration.

But some products cannot move by rail for less than their value. The waterways provide freight transportation at from one-tenth to one-twentieth of the average rates per ton-mile on the rails. The railways and the waterways are complementary, not competitive. To deprive certain commodities such as ore, coal, oil, and grain of their low-cost water haul would dry up their production.

The bulk of the freight now moving by water is nontransferable to the railroads. All that would be accomplished by an attempt in that direction would be the shutting down of ore and coal mines, the closing of oil fields, the return of grain areas to pasture, and the crippling of factories, to say nothing of creating vast new unemployment along the waterways.

There are commodities which cost more to carry by rail than their production. During the depression it costs 25 cents a bushel to carry wheat by rail from Salina, Kans., to Chicago. On December 15, 1932, the average price of wheat on the farm was 31.6 cents a bushel. Studies made into the cost to a farmer of producing a bushel of wheat ranged upward from a minimum of 40 cents. Obviously, what a farmer cannot market at a profit he will quit producing, and the same is true of everything that comes from the farm, the mine, or the factory.

To protect and continue certain types of inland production from farm, factory, mine, or oil field a special low-cost transportation is provided in the Nation's waterways.

HOW GERMANY UNDERSELLS

Germany was able to undersell rival countries in foreign markets because Germany recognized the necessity of this low-cost transportation and all bulk freight was assigned to the canals and the railroads were given only perishable freight, and such commodities in which time entered as an element of sale and delivery.

Some foreign countries have what amounts to two sets of currencies, recognizing that a portion of the population requires low-value coins suitable to its earning power. For instance, in Egypt there is the big piastre, valued at 1 cent in American money, and the little piastre, worth half of that. But below the little piastre is a tiny coin known as the ashara kordah, valued in American money at one-fourth of a cent. In Holland there is the halve cent, a very small coin that is worth one two-hundredths of a guilder, and the Dutch guilder is 54 cents in American money.

HANDS OFF THE WATERWAYS

The raising of the rates on the waterways bound to come from the passing of their control to the I. C. C. will only smother the movement of freight which requires low-cost transportation. The railroads will not have improved their position for the proposed remedy is no remedy at all. It amounts to the railroads trying to escape for a little longer time from the consequences of their appalling overcapitalization and worse, and the damage done to production cannot but be incalculable.

The whole idea of placing the waterways under what amounts to railroad control appears to be so ill-considered, so fantastic, and so ravaging in its final effects as to constitute an amazing piece of impudence. Rather than take rank as an achievement it is foregone to be everlastingly classified as an annihilation; a cold-blooded assassination of inland industry and agriculture to the detriment of national welfare for all time.

The most vital facts about the American railroads are the facts that are least often heard of when we discuss our transportation problems. Does the past of the railroads gauged on the real facts justify placing the paid-for waterways into the same domain of jurisdiction with them? Do the railroads come with clean hands? Will the public, when it realizes what is being

attempted, calmly accept the rape of the waterways by the railroads, or will it demand a policy of hands off the waterways?

Both a waterway and a railroad in their respective functions are "beasts of burden." The railroad has been likened to the speedy, showy horse and the waterway to the faithful, plodding mule once an indispensable figure upon the tow-paths of the early canals.

Less impatient under the pressure of heavy weights and more capable in resisting sun and rain than the horse, the mule is a model of reliability, patience, and endurance. The mule cannot neigh loudly like the horse but emits a feeble, hoarse noise and depends upon those loyally served for articulation and protection.

To hitch them together under a single set of harness would cramp the usefulness of both animals—the same result as would come from placing the railroads and the waterways under the same control of the Interstate Commerce Commission.

With expressions of esteem to yourself and your associates, I am

Sincerely yours,

RAYMOND G. CARROLL.

Oregon's Record as Sugar-Beet Producer

EXTENSION OF REMARKS
OF
HON. HOMER D. ANGELL
OF OREGON
IN THE HOUSE OF REPRESENTATIVES
Wednesday, July 12, 1939

Mr. ANGELL. Mr. Speaker, my State, Oregon, has an enviable record as a producer of sugar beets. The Owyhee reclamation project produced 16.2 tons per acre on 17,000 acres last year, which, I understand, was the highest production record in the United States, with the exception of one area in northern California. The new sugar refinery, erected by the Amalgamated Sugar Co. at Nyssa, in eastern Oregon, on a 112-day record produced 750,000 bags of sugar, which was 100,000 higher than its anticipated production. In addition to this the company fed 8,000 head of cattle from beet pulp as a pulp-feeding demonstration.

Oregon has a great area under irrigation, admirably adapted to the production of sugar beets. The fly in the ointment is that under the A. A. A. crop-control program Oregon growers are not permitted to place this land in production. The regulations under this program even threaten to reduce the Owyhee beet acreage from 17,000 acres to 12,000 this year. This one plant has added a million dollars to the assessed valuation of the Oregon county in which it is situated. Both the company and the growers have operated at a profit, even during these difficult times. I heartily concur in the observations of our colleague the Honorable FRED L. CRAWFORD, of Michigan, when he said recently in the House:

At the outset I want to repeat the answer which I gave to the gentleman from Texas on Monday when he asked how much sugar should be produced by the southern cane- and the beet-sugar-producing States. I claim that the American sugar-beet growers and the American sugarcane growers, including the growers of Hawaii and Puerto Rico and the Virgin Islands, should first be allowed to grow all of the sugar that they can supply to our market. Whatever balance is left and needed to supply our consumptive demands should go to Cuba and the Philippine Islands. I further stated, and here repeat, that as long as our own farmers can grow sugar beets and sugarcane so that the cost of sugar at retail to the consumers in the United States will not exceed the going average retail price of sugar paid in all of the countries of the world, they should be permitted to do so, and I advocate that they be encouraged to do so as a matter of good national economy.

I urge for the consideration of the Members of this body the modification of our existing regulations, so that this thriving American industry may not be hampered, but may be encouraged, to the end that the American market for sugar consumption may be made available to American sugar producers and not thrown away by curtailing our own facilities on the one hand and importing on the other large volumes of sugar for domestic consumption.

The Oregon Journal, of Portland, Oreg., recently published an editorial on this subject, which is of much interest. It is as follows:

OREGON HIGH AS SUGAR STATE

Sugar-beet growers in the Owyhee reclamation project produced 16.2 tons an acre on 17,000 acres last year, the highest production in the United States save one spot in northern California.

The new $2,500,000 refinery of the Amalgamated Sugar Co. at Nyssa set a record, on its first 112-day sugar campaign, of 750,000 bags of sugar, 100,000 higher than expectations. In addition, the company fed beet pulp to 8,000 head of cattle, as a demonstration in pulp feeding for Nyssa-Vale district farmers.

Oregon's cooperative experiment in sugar-beet raising and sugar manufacturing is an unqualified success. Both the growers and the company are in the black in the first year of operation. Four hundred persons were given employment in the factory during the sugar campaign. Almost $1,000,000 in assessed valuation was added to the tax base.

Despite all this, and the fact that America must import a large portion of its sugar from Cuba, the Philippines, and elsewhere, the A. A. A. crop-control program threatens to reduce the Owyhee beet acreage from 17,000 to 12,000 this year.

Actually, on the basis of demonstrated performance and need, acreage in the Nyssa-Vale area should be stepped up to 30,000 and another refinery unit added. If Secretary Wallace reduces acreage instead, Oregon residents can charge an unwarranted interference with a necessary, successful industry.

Totalitarianism and Government

EXTENSION OF REMARKS
OF
HON. JERRY VOORHIS
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, July 12, 1939

Mr. VOORHIS of California. Mr. Speaker, democracy is a form of government which is bound to be both difficult and expensive for the present generation. Any form of dictatorship—and I make no exceptions—is a form of government which is comparatively cheap and easy for the present generation—except, of course, for the liquidatees—but which sows the wind that future generations must reap a whirlwind.

Democracy is expensive because it imposes upon itself certain limitations which the dictator can and does completely disregard. A democratic state exists for the sake of its citizens; a totalitarian government exists for its own sake—or, rather more accurately, for the sake of the clique that happens at the moment to be in control.

Hence democracy must operate within certain prescribed constitutional or traditional bounds and must sometimes even forego taking measures which are evidently in the national interest simply because those measures cannot yet be taken with the assent of the majority or within the self-imposed limitations which democracy sets for itself. This is why I have described democracy as expensive. For illustration the American Government cannot order the farmers of the Nation to take measures to conserve the soil; it must induce them to do so by some such measures as our present Soil Conservation Act or the efforts of the T. V. A. In this particular case I am of the opinion that these self-imposed limitations upon our democracy are both proper and necessary.

There are other fields where such expensive limitations on the action of our democratic Government seem to me less necessary, less defensible from the point of view of national interest, and, indeed, less conducive to democracy itself. The principal one is in the field of finance where, because we hesitate to lay our hands on a monopoly of the power to create credit which has been allowed to grow up in the hands of private finance, Government finds itself in the rather ridiculous position of having to give interest-bearing public bonds to bankers to induce them to create deposits for the Government to spend—even when the funds are to be used to make perfectly secured loans to local governments or to construct self-liquidating Federal projects.

Another respect in which the price of democracy is a considerable one for the present generation is in its inability to provide continuity of policy. The very fact that the more frequently elections are held the closer popular control over Government becomes, means that the extent of such popular

control is to some degree the very converse of the measure of continuity of governmental policy.

A totalitarian government, on the other hand, is limited in the duration of its policies only by the possibility of armed revolt against it. By disposing of political opponents at frequent intervals, the immediate likelihood of such revolt can be removed, even though the certainty of its ultimately taking place is no doubt increased measurably by such tactics.

Finally, and perhaps most important, democracy must, or, at any rate, does, impose certain limitations upon itself in dealing with unemployment. For example, no democratic government can solve the unemployment problem by compelling the unemployed to work for board and bed in a work camp. Neither can a democracy undertake types of work which are not currently regarded as properly belonging to the category of public works as contrasted with the field of private enterprise. Thus, democracy must deal with unemployment, first, by paying out far more, and, second, by receiving far less back than a totalitarian government can do.

Shall we then conclude that democracy is scarcely worth keeping since its price to our generation is so great? No sincere American, no one who believes in human liberty or the worth of the human soul, no one who cares a straw about the generation of the future can answer that question in any way except with a resounding "No." For the cost of any totalitarian system to future generations is bound to be of the heaviest. Children grow up under such a system with their minds nurtured not on truth but on propaganda; they learn the stock prejudices, the stock hatreds, the accepted salutes. They grow up into a world of fear where the safety of the state hangs by the slender thread of the life of a single man. They grow up to be helpless unless they are under direction. And they face in future the certainty of social convulsion and civil conflict.

The best illustration that I know of the differences between democracy and dictatorship is this: Democracy is like a vertebrate animal with its basic body structure within and its vulnerable flesh without. It can readily be wounded, but the wound can heal. Flesh wounds it can endure, and its basic structure can remain untouched. Dictatorship is like an invertebrate with an exo-skeleton. It appears formidable, unassailable, proof against attack. And indeed it is not easy to break through the shell. But once the shell is broken, and the inner flesh left unprotected, life departs, because without the shell there remains nothing but a sort of protoplasmic jelly.

Indeed, at the risk of seeming to be narrow-minded and unwilling to see the good in foreign systems, I am going to say that anyone who says, "Of course I don't like Hitler, but after all—," and anyone who says, "Of course I do not like Stalin's methods, but after all—," has failed rather miserably to grasp the central significance of the times in which he lives. For the significance of these times lies, above all things else, in the struggle to see to it that human liberty does not altogether die in the world. Between a system of force, violence, and contempt for the average citizen on the one hand, and a system of civil and religious liberty, and free, popularly chosen, constitutional government on the other, there can be no compromise and no crossing over. No one can be devoted to both at the same time. Each of us must make a final and definite choice. And this point is of tremendous importance as I shall presently show. For if liberty and constitutional democracy can be made safe in one nation, if free government can conquer unemployment in one nation then these values are safe. For they are dynamic, whereas serfdom and totalitarianism are, in spite of their outward show, static and inwardly dead.

Fundamentally and in the long run I am convinced that neither democracy nor freedom can be destroyed. I can find no instance in all history where a tyrant did not, sooner or later, die; neither can I find any instance where freedom was effectively destroyed. Always man has sought bread and reasonable security and freedom for his spirit. Sometimes when he had to choose he has preferred bread to freedom. But never has he given up the struggle. And this is why the moment the dictator believes he has the liberties of the people done away with is the same moment when those same people begin to value their liberty and to plot and plan for its reestablishment. Time fights with democracy. Happy is that nation, however, where the people realize before it is too late, how precious a thing their freedom is and set about protecting it ahead of time.

I have said democracy was a system of government wherein the present generation goes through increased difficulty and confusion for the sake of the peace and liberties of the future. But the job of people who are responsible for the perpetuation of constitutional democracy into the future has got to be to see to it that the price to the present generation does not become too great for it to bear. I have said that man never gives up the struggle for freedom. He never does, but before freedom must come bread and a reasonable security. In other words, the preservation of freedom implies necessarily the supplying of a solution to unemployment and unnecessary poverty. The solution need not and cannot be perfect—for this is democracy where nothing is perfect, nothing complete, nothing final—but the solution must be at least pretty good.

It is no accident that there is not one example in history where a democratic government transmuted itself into a dictatorship by the process of becoming more and more efficient or more and more effective in meeting economic problems. Such a change in governmental system comes only through a sharp convulsion, a sharp breaking off of old ways, and a new start in a different direction.

Hence to my mind the most irresponsible and dangerous type of demagoguery that is abroad in the land today is the attempt of some people to make the American people believe that constructive attempts to make our Government more effective and better able to reduce inequalities and deal with unemployment, monopoly, and corruption are steps toward dictatorship because forsooth their democracy, to be constitutional, must be synonymous with inefficiency, lack of planning, and governmental ineffectiveness in dealing with economic problems. Such, I am convinced, does not need to be the case.

There are four pillars of democracy and if they are protected and kept in good repair, we need have no concern about the soundness of our constitutional form of government. The first is civil and religious liberty. American democracy is a way of life for the people of the Nation—for all the people. It is a way of life in which no man questions the right of another to speak his mind or to go where he wants to go or—and this is most important—to have any religion he may choose. In American democracy there can be no place for the stirring up of religious prejudice or hatred, and certainly there is no place for a cowardly attempt on the part of any group or person to advance to political power over the prostrate form of the constitutional liberties of others. America affords to every man as much of liberty as he can exercise without depriving his fellow citizens of similar liberties. America always has, and I trust, always will find her inspiration in the religion that sent the first settlers to these shores. That religion is one of brotherhood.

Second, American democracy means the right of the common citizen as well as the uncommon one to own property. It means that the task of government must consist in part in the protection of the small farm and the small business from destruction, the encouragement of home ownership, and the prevention of monopoly encroachment on the rights of the little man. But American democracy also means that property, which by its very nature is of vital public concern, shall be subject to proper control in the interest of all the people. And American democracy must mean that the right to private property in a home, a store, or a farm shall not be confused with the very different question as to whether or not a waterfall, a forest, or the power to create money or credit can properly be claimed as the private property of anybody except the Nation itself.

Third, American democracy means government of the people, by the people, and for the people. It means a government of men chosen at frequent intervals by the people and subject to involuntary retirement without notice at the will of those same people, It means a government wherein

the absolute control of the purse remains in the legislature and where the executive is responsible to the people not only for honest but also for efficient and effective administration of the trust the people have for a brief few years reposed in him. Finally it means government within the framework of a constitution which sets forth basic law and basic procedure for making law and which grows both by interpretation and by amendment with the needs of the people whose forefathers created it, and to assure whose good government it fundamentally exists.

In the fourth place, American democracy means equality of social and economic opportunity. Like the ideals of the Declaration of Independence, so this ideal is one that has never been achieved.

But let just one generation of Americans stop struggling to attain it and the very genius of our democratic way of life will pass away. Dictatorship exists primarily to freeze and perpetuate distinctions between man and man, not only as to political position but also as to economic status. If democracy would be different, then its central task must be to break down barriers that stand in the way of the opportunity of its humblest citizen and to choose, when it must choose, the basic well-being and the right to work of the many rather than the luxury of privilege of the few.

These four elements, personal and religious liberty, the right of all to private property, government controlled by the people, and equality of opportunity, are the four foundation pillars of American democracy. Take out any one of them and the great superstructure of American civilization will totter and maybe fall. Leave them strong and firm and democracy is safe in America.

Now, totalitarianism can exist in any field of human activity. It exists wherever an institution comes to exist for its own sake rather than to minister to the needs of human beings. We have plenty of rather vigorous roots of totalitarianism right in this country.

And, therefore, I do not for one moment believe that these four pillars of our constitutional democracy can be kept in repair without a considerable amount of constructive governmental action. For example, I am afraid we are in another one of those recurring periods when vigilance on the part of government is necessary to hold in check movements which seek to destroy religious and civil liberties. The role of government in this connection becomes that of protecting democracy against totalitarianism.

Again in a speech before the Bar Association of Dallas, Tex., Dr. Joseph E. Goodbar had this to say about totalitarianism in finance:

> Bankers have not ordinarily been conscious of complicity in destructive economic practices. But when they lend money to finance the purchase of a majority interest in any profitable business, and the buyers use these bank funds to hold title until able to sell back watered nonvoting stock to the public at a cash profit—while keeping control in their own hands—they put quick profits into financier's hands and make easy the fleecing of the public.
>
> When banks lend money they haven't got (bank credit), to finance construction of plans and buildings the public does not need, they again produce quick profits, made by selling out to the public. But between existing businesses and the unneeded interloper is produced a battle for existence that destroys earning power and frequently exterminates both. Such destruction of earning power was a major cause of the 1929 smash. And the continuing danger of repetition is a brake that holds back confidence, investment, and recovery. This savings-destroying practice depends almost entirely on the lending by banks of money they haven't got to finance enterprises the public does not need.

And Mr. Walter Lippmann, in his book The Good Society, chapter on the Agenda of Liberalism, says this:

> The evil effects and the dangers of the business cycle need no elaboration. It is clear that social controls are required which will keep the real savings and the real investments of the community equal to each other. The development of these social controls was, until this generation, almost completely neglected by liberal economists and statesmen. They failed to realize that when saving and investment become distinct, the value of money becomes the accidental byproduct of the transactions between bankers and their clients. The principal money of a modern society consists, not of coin stamped in the Government mint, but of bank deposits that expand and contract with the creation of private credit. Thus the money which is the medium of the exchange economy, the standard in which are expressed the prices that regulate the division of labor, was until recent times dependent upon accident. The value of money has fluctuated violently during the century and a half in which the industrial revolution has been under way. Yet the intricate interdependence of mankind is inconceivable without money. For this interdependence consists in countless exchanges of an infinite variety of goods and services made every hour of every day in countless markets. These exchanges could not be made by direct barter; they are possible only because all goods and services are reducible to a common denominator. They are valued, not in relation to each other, say, a bushel of wheat against a music lesson, but in relation to money. They have a price, and insofar as money is not neutral, prices will be unjust and all economic calculation impaired.
>
> The measures which would be effective to maintain a neutral value for money do not concern us here. We are engaged in staking out the field of required policy in an exchange economy, noting the main headings of the agenda of liberalism. It is enough to say here that the experience of more than a century has demonstrated that the automatic gold standard, if in fact such a standard ever existed, does not provide a sufficiently neutral money for a mode of production based on the world-wide division of labor. Monetary reform and what is now called monetary management are therefore necessary.

The very acme of totalitarianism is the dominance of production, exchange, and consumption by totalitarian finance utilizing its monopoly of the power to create money and credit—or not to create it—without regard to national welfare or the requirements of the economy.

For this reason I believe that if we are to preserve democracy and a free economy the function of originally bringing money or credit into circulation has got to be a governmental one. I think the framers of the Constitution intended that it should be that way and that unless we make it so the very increase in productive capacity which is constantly taking place will lead to a continual rise in the value of the dollar, with the inevitable result of continuing foreclosure of the real property of the Nation and its gradual absorption by those who control the manufacture of money.

In the third place, we are continually being warned that T. V. A., Bonneville, and others are the entering wedge of totalitarianism in America. Now, why is there anything totalitarian about the T. V. A., particularly when we contrast its work with that of some of our private utility empires? I have never found one single shred of evidence to indicate that T. V. A. was being conducted for any other purpose than that of raising the standard of living of the people in the region which it serves. If the same can be said of any private utility I do not know the name of that utility. I am convinced that there is all the difference between monopoly and competition in industry that there is between totalitarianism and democracy. Therefore, I am convinced that Government competition in the utility field is a step away from totalitarianism—not toward it—and I believe Swedish experience proves this to be true. By the same token, I would be perfectly willing to see governmental action in the field of marketing farm commodities if that is necessary to protect our system of family-unit farming. Certainly something has got to be done to protect it, and something better than we have done yet. The same goes for retail merchandising and makes me extremely interested in Congressman WRIGHT PATMAN'S chain-store tax bill.

In other words, what I am saying is that as long as you keep religious and civil liberties, widespread private property ownership, freely chosen constitutional government, and reasonable equality of economic opportunity, democracy is safe and that it is nothing but a cheap political tactic to try to get the American people to believe that whenever their Government does anything it is per se a step toward totalitarianism, and that, conversely, to permit private forces to build empires of finance, merchandising, and electricity is the essence of democracy. I am convinced that exactly the opposite is true.

Democracy in America will, in my opinion, not be destroyed by a German army nor saved by a foreign war. It will be destroyed only by a lack of faith on the part of our own people or a lack of patience; and it will be saved only by the taking of such measures here at home as will restore faith in the effectiveness of democracy and take some of the present excessive strain off of our people's patience. I believe every group in this country has got, furthermore, to take a more sincerely patriotic attitude. No government can stand too long continued attack without being to some degree weakened. There is a world of difference between attacking the

policies of the Democratic administration on the one hand and charging it with being a tool of "red" Russia on the other. The first is good and necessary, the second is despicable, and in the end will prove destructive to democracy itself if persisted in long enough.

There can be no question in America of the right of anyone to hold whatever views he may choose to hold, but I think it is important to realize that one of the dangers to our democracy today and one of the most likely vehicles for totalitarianism is the "united front" idea. I say this only upon the most mature consideration. The thing that most people forget is that both sides can have a united front, and that the growth of one begets the growth of the other. It is undoubtedly true that the very presence in the country of organizations of the right which include followers of the Nazi world movement will inevitably drive more and more progressives toward an extreme left-wing position, while the presence of organizations of the left, which include members of the Communist International, will drive more and more conservatives toward an extreme right-wing position. The end result of such a tendency I shall leave you to picture for yourselves. Suffice it to say it is one I do not like to contemplate. The good sense of Americans has broken tendencies like this before in this country's history. We can do it again. The time will come when conservatives who love their country will be ashamed to have given ear to would-be Fascist tin gods who called on them to gird for battle to "keep the Communists from violently taking over the country"; and the time will also come when patriotic progressives will be sorry they have ever listened to Communist appeals to form "a united front" against the "imminent danger of fascism" in America.

What we need in this country is more people who talk about democracy and really mean it—more people who are willing to sacrifice at least some of their pet ideas for the sake of freedom and liberty; more people who will fight as hard against totalitarianism of one extreme as they will against totalitarianism of the other extreme. We need people who will take the trouble to sift truth from falsehood and who will refuse to believe fantastic tales put out for propaganda purposes from sources which seek to spread fear, hatred, and prejudice. We need people who will understand that 95 percent of the people of this country are nothing more nor less than sincere, earnest people seeking, within the framework of our Constitution, to work out their country's problems. We need people who will resolutely determine that the other 5 percent—to whatever group they may belong—are not going to lead the 95 percent into trouble.

Upon such a group—upon those who mean exactly what they say when they speak of defending democracy—the future of America depends.

Playing Fair With the Next Generation

EXTENSION OF REMARKS

OF

HON. FRANCIS H. CASE

OF SOUTH DAKOTA

IN THE HOUSE OF REPRESENTATIVES

Saturday, June 10, 1939

Mr. CASE of South Dakota. Mr. Speaker, I am pleased that the committee has incorporated as section 402 of the bill before us (H. R. 6635), a bill which I introduced in the Seventy-fifth Congress as H. R. 6041, and reintroduced in this Congress as H. R. 954.

This is the proposal to place the Federal contribution for aid to dependent children in the social-security program on a 50-50 basis, the same as is extended in the old-age assistance and other parts of the program.

My bill, H. R. 954, proposed—

That section 403 (a) of the Social Security Act is amended by striking out "one-third" and inserting in lieu thereof "one-half"; and section 403 (b) (1) of such act is amended by striking out "two-thirds" and inserting in lieu thereof "one-half."

The committee has incorporated this as paragraph (a) of section 402, reading as follows:

SEC. 402. (a) Effective January 1, 1940, subsection (a) of section 403 of such act is amended by striking out "one-third" and inserting in lieu thereof "one-half", and paragraph (1) of subsection (b) of such section is amended by striking out "two-thirds" and inserting in lieu thereof "one-half."

My interest in this legislation arises from the fact that I believe any government which recognizes a social responsibility to provide aid for its needy aged must recognize an equal responsibility for its dependent children.

The South Dakota Legislature in 1937 felt that way about it, and in setting up authorization for an aid-to-dependent-children program, provided it would become effective when the Federal Government offered its grants and aid on a dollar-for-dollar basis, the same as extended on other parts of the social-security program. Thereupon I introduced the bill in the Seventy-fifth Congress and was pleased to see it receive substantial endorsement from various parties and groups interested in child welfare. Not only was the bill endorsed by those who are working professionally in the field of social welfare, but the movement received support from those who are active in the volunteer child-welfare program of the American Legion and the American Legion Auxiliary.

I am glad now to see this change among the amendments to the Social Security Act offered by the committee, and feel sure that the House will approve it.

Under permission to extend these remarks, I offer the following portion of my testimony from the printed hearings of the committee for March 24, 1939:

The effect of this amendment is simply to provide for an aid to dependent-children program on a program of 50–50, or equal, basis, on the same principle that is embodied and observed in all other titles of the Social Security Act. Particularly I have in mind those of the aid to the aged and the aid to the blind.

Mr. TREADWAY. Are you correct with reference to the aid to the blind? We had a witness here yesterday on the question of blind contribution, and it seems to me that was on the basis of one-third. I may be wrong.

Mr. CASE. I have a copy of the proposed changes in the Social Security Act, constituting the report of the Social Security Board to the President, issued in January 1939, on page 24 of which appears this sentence:

"At the present time in addition to reimbursing the States for 50 percent of their assistance payments to the needy aged and the needy blind, the Federal Government makes an additional grant of 5 percent which the States may apply to administration."

So I take it from that that the 50-percent contribution applies to the needy aged and the needy blind, and, of course, the act itself, which you have available, is further evidence.

Mr. TREADWAY. Let me try to keep the record straight, not that I want to interrupt your statement. But let me read you from the document submitted by the Social Security Board, with reference to the blind:

"Old-age assistance and aid to the blind: At the present time in addition to reimbursing the State for 50 percent of their assistance payments to their needy aged and needy blind, subject to a maximum of $30 per month, the Federal Government makes an additional grant of 5 percent which the States may apply to administration."

It goes on:

"This flat 5 percent does not represent an adequate Federal contribution for a proper administration and the Board therefore recommends that the law be amended so that Federal grants may reimburse the States for 50 percent of the necessary cost of proper administration."

Mr. CASE. Yes; the sentence that I cited is the first sentence of what the gentleman from Massachusetts read.

Mr. TREADWAY. So we are not far apart.

Mr. CASE. The difference is simply the administration. In the paragraph just following the paragraph the gentleman from Massachusetts read, the Board, in its recommendation says this:

"The Board strongly recommends that grants-in-aid to the States for aid to dependent children be placed on a 50-percent matching basis already in effect for the other two programs."

My bill proposes to do exactly that thing; to provide a 50 percent matching basis for the program of aid to dependent children, the same as in effect on the other two programs.

I introduced a similar bill in the Seventy-fifth Congress, which was H. R. 6041. At that time I asked the Social Security Board to give me an estimate of the amount of money that would be involved in doing that. Under date of August 18, 1937, the then executive director of the Board advised me they estimated that the increase for H. R. 6041 would be about $20,000,000.

The need and merit of this proposal, it seems to me, need hardly to be stressed. Whatever arguments there are for the Federal Government making a contribution for aid to the aged, certainly extend to the aid for dependent children, because these children constitute the chief source of our problem children during the adolescent period. If the Federal Government has a legitimate stake, as I believe it has, in providing pensions for the aged, it

certainly has an equal or greater stake in providing proper aid to the dependent children. We have a longer period of expectancy of interest in those children. On the merits of the case and on the recommendation of the Board, I earnestly commend to your consideration the proposal embodied in H. R. 954, to make an equal grant in the aid to dependent children.

Thank you.

A Touching Tribute

EXTENSION OF REMARKS
OF
HON. FRANCIS D. CULKIN
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Wednesday, July 12, 1939

RESOLUTION OF DISABLED AMERICAN VETERANS EULOGIZING THE MEMORY AND SERVICES OF HON. BERT LORD

Mr. CULKIN. Mr. Speaker, Chapter No. 60, Disabled American Veterans of the World War, in meeting duly assembled, passed the following resolution gratefully acknowledging the services of our late colleague, BERT LORD. This tribute mirrors most effectually the public service of our former colleague and, pursuant to the permission of the House, I append it hereto:

MEMORIAL CHAPTER 60,
DISABLED AMERICAN VETERANS OF THE WORLD WAR,
Binghamton, N. Y.

MRS. BERT LORD,
Afton, N. Y.

DEAR MRS. LORD: At a meeting of Memorial Chapter, No. 60, Disabled American Veterans of the World War, held June 14, 1939, the following resolution was unanimously adopted:

Whereas the inscrutable will of Divine Providence has removed from our midst a most conscientious and valued public official, Congressman BERT LORD, who was for many years interested in the welfare of the members of Memorial Chapter, No. 60; and

Whereas this organization desires at this time to mark the passing of this most helpful and valued friend, who departed from earthly life on May 24, 1939, in Washington, D. C.: Therefore be it

Resolved, That we do herewith record a brief summation of the character and accomplishments of the decedent, as follows:

Throughout his long public service, BERT LORD merited and was accorded the love and confidence of his associates and friends, and his death comes to us as a most grievous loss and affliction.

His companionship and wise counsel were highly prized by the members of Memorial Chapter, No. 60, as well as by the people of the Thirty-fourth Congressional District and of the fortieth senatorial district where, for many years, he rendered invaluable service as a fearless and capable public official and where his vast knowledge of the needs of the people he so ably represented will long be remembered.

His personal qualities were of that loving nature which wins the warmest attachment. His professional, business, and social relations were characterized by a geniality and courtliness of bearing and conduct which tended to make both official and personal contact with him more than ordinarily agreeable. His work was always faithfully and honestly performed. His devotion to duty was inflexible. He proved himself to be an able and competent public official: Therefore, be it further

Resolved, That we herewith convey to those who were nearest and dearest to him the expression of our tenderest and deepest sympathy in their great bereavement.

Respectfully,

HAROLD B. NICHOLS,
Chairman, Resolutions Committee.

The Neutrality Bill

RADIO ADDRESS BY HON. BERNARD J. GEHRMANN, OF WISCONSIN

Mr. GEHRMANN. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following address which I made recently over the radio on the neutrality bill:

Greetings to all listening in on this radio program.

WHAT KIND OF NEUTRALITY CAN KEEP US OUT OF WAR?

Friends, I have discussed five different topics previous to this one, since the Wisconsin delegation of Congress decided to keep the people informed of what Congress is doing. I appreciate the opportunity of being able to express my views to the people of this State on the many important issues that Congress has to deal with. I believe that at no time in the history of this country have the people been more interested in what their chosen representatives are doing than right now. These are momentous times, and I am so glad that apparently most of the people do take an interest in their Government. That is a healthy condition, and it is as it should be. As long as our American citizens keep track of their representatives, our democratic form of Government is safe. I have stated many times that I was worried over the seemingly indifference toward Government which many people indicate when the very life and existence of our American institutions are threatened. I am satisfied that I was unduly alarmed and that the people now, as much as ever in our history, are concerned in the preservation of peace and democracy.

That was proven to me unmistakenly during the debate on Joint Resolution No. 306, commonly known as the Neutrality bill. Every Member stated that his constituents were very active in behalf of peace, and we all received hundreds of letters from the people back home. All the old Members who were in Congress during the World War period stated, during the 4 days of debate, that this was the most important issue before any Congress since the early days of April 1917. The House voted on this bill on June 30, late at night. Of course, everybody voted their honest conviction. I hold no ill-feeling against anyone who voted different than I did on this important issue. We all realized that our beloved country might be plunged into another world war by our action. Many old Members who spoke were choked by tears and emotion, because they realize what another war would mean. So the House remained in constant session from 11 in the morning until long after midnight for several days, debating and voting on this important neutrality legislation.

The Committee on Foreign Affairs held extensive hearings on the neutrality bill. They amended and changed the original draft several times. After the first few hours of open debate, those sponsoring it discovered that there was a great deal of opposition to this type of legislation. The present neutrality law, if properly enforced, seems to me to be ample to meet our needs, unless we want absolute isolation. This bill, I think, gives any one man altogether too much power as well as responsibility. The President, no matter who that may be, has the sole authority to say where and when a state of war exists, who the aggressors are, what parts of the oceans or what areas are to be declared or considered as danger zones and, therefore, to be traversed or traveled by American citizens or American ships at their own risk. I believe that this kind of legislation will get us into trouble much sooner than the present act, or if we had no neutrality legislation at all. I don't care who the President might be, no one individual should be charged with such tremendous responsibility, nor should he have such far-reaching power as this bill attempts to give him. The only way to remain neutral and keep out of war is to sell absolutely no war material, even in the raw state, to any nation even if they have the money to pay for it and the ships to haul it away. That should include scrap iron and similar metals and material like cotton, oils, and many other articles that are converted into explosives. That would include tractors, automobiles, tanks, and planes. I realize that we have many millions of unemployed and that we need to increase our production and manufacturing and thereby put more people to work, but I don't believe that we should do that at the risk of involving us in another world war that most certainly will be much more devastating and destructive than even the World War was.

Take the case of Japan and China. I believe the President did the right thing not to issue a proclamation that a state of war exists there, because it would have aided Japan most. But, on the other hand, I feel that we could bring Japan to her senses by refusing to sell them anything and to place an embargo against everything made in Japan. That would not be neutral, and still, under the pending bill, it is very plain who we wish to help and against whom it is directed. Then why not apply what the President termed "other means than war and perhaps even more effective" to aggressor nations such as Japan? I am afraid we are not willing to pay that price by refusing these orders for war materials and the profit incident thereto.

The committee agreed that certain sections were perhaps far-reaching and struck them from the bill, but even with those eliminated I feel the present act to be much safer for us. If we want to keep out of the war which surely seems to be ready to break out any day now, we must make up our minds to be willing to pay the price necessary. Therefore the question is, Are we willing to pay the price which would preserve peace for America? Everyone says they are for peace. Most Americans will say with great emphasis that they don't want this country to get mixed up in another foreign war, but what we want and what we eventually get are two different things.

Usually what determines the issue is how much we are willing to sacrifice to get what we want. America will not be able to stay out of the threatening world war, nor make her contributions toward world peace unless she is willing to pay the price that will be necessary. That price is to forego profits and employment for the sake of peace and neutrality. If we decide on the policy of continuing war trade by selling arms, munitions, and other war materials, then we will start right down the road

we traveled previous to 1917 which forced us into the World War. Now, as then, our munition factories are being enlarged to meet the foreign demand. When cash gives out, we will have to extend loans to protect our own manufacturers from closing their factories. Soon we will be involved to such an extent that we will have to fight on the side of those who owe us all that money. Our trade in war materials up to the time we entered the World War amounted to approximately $7,000,000,000. A large part of that $7,000,000,000 was considered as easy money or profit previous to the World War, but that war has cost us since then over $50,000,000,000 and we will be paying over $1,000,000,000 a year for more than 50 years to come, to say nothing about the suffering of those who served during the war. So then, I ask you, did it pay us to enter that World War or did we, as a Nation, make any profit from that war or have we made the world safe for democracy? And, even if it would seem to enable the United States to get out of the depression we are in today and again bring back prosperity by selling arms and munitions, is the slaughter of human beings and the suffering incident to a war worth such a price? I don't feel that it is and I, therefore, voted to put the arms embargo in a modified form back into the bill under consideration. The administration did not want the embargo provision. That is why the leaders brought in this new neutrality bill. Under the present law, arms and munitions cannot be sold to belligerents as soon as war is declared, or the President issues a proclamation that a state of war exists between certain nations.

When the House finally got ready to vote on the arms embargo amendment, the leaders, including the Speaker of the House, the majority floor leader, and several outstanding Republicans like Congressmen WADSWORTH and BRUCE BARTON, of New York, fought bitterly and made passionate pleas against adoption of that provision. A teller vote was ordered and the House refused to be stampeded by the leaders. On a nonpartisan vote, those of us who felt that we should refuse to sell arms and munitions to either side, won out by a vote of 181 for embargo and 176 against it. Then a roll call was demanded and those opposing the arms embargo, including the leader of the House, were beaten worse after they made these passionate pleas than before. This time on a roll call, the vote was 214 for embargo and 173 against it. This was a stunning blow to all of those who favored repeal of the present neutrality law—they did not expect to be so decisively defeated. They evidently forgot that all Members heard from back home. They forgot that the people have thus far not been stampeded into war hysteria as they were early in 1917. After that defeat, they gathered their forces and the floor leader and the so-called whips were kept busy to line up the membership against utter defeat of this bill.

A motion was made to recommit the bill to the committee. That kind of a motion, if carried, means that the bill would not come up again this session. That was the closest vote that I have seen since I have been a Member of Congress. That motion was defeated, including the Speaker's vote, by a margin of 2 votes, it being 194 yeas and 196 nays. On that vote a recount was ordered, but the result was the same. On final passage, as amended, the vote was yeas 200, nays 188, or a 12-vote margin. But many voted for the bill after the modified embargo features were added. It now goes to the Senate, where many old and most influential Members will fight against lifting or modifying our present arms embargo.

I must quote a few remarks made by a Member who knows from personal experience that war is hell, he having served during the World War and was wounded so severely that both of his legs were amputated right close to his body and is being pushed around in a wheelchair. He is one of the brightest Members on the floor and on matters of war or peace is naturally most influential. I quote part of his speech that he delivered shortly before the first vote was taken. "We are right down to the one important issue of whether we are going to continue to furnish arms and munitions of war to murder innocent people with whom we are at peace. That is the sole remaining issue.

"Throughout this debate no Member of this House has come on this floor and said that the selling of arms and munitions of war between 1914 and 1917 was not an important factor in our becoming involved in the World War.

"Yesterday I listened to my colleague the gentleman from New York [Mr. BARTON] describe what would happen in case of another war. He said that the war would be brought into the homes of every American that had a radio. I could almost hear the steeples of the cathedrals of Europe crashing. He described the screams of women and children, and said the American people would demand the lifting of any embargo. Perhaps they would, but let them decide that when the occasion arises. The thing that concerns me today is that as the American people listen to the screams of the women and children who are being bombed from the air, the radio may not announce that these bombs were made in America.

"It has been claimed, and undoubtedly rightly so, that we manufacture in the United States the most poisonous gas manufactured in the world. It would surely be considered a munition of war and without an arms embargo would be shipped from the United States. I had occasion to be in a hospital not far from the front during the first battle of the Argonne and I saw American men, some of them brothers, some of them now possibly Members of this House, coming in, their eyelids burned, their bodies burned from what was then the most torturous gas known, but that gas was as nothing compared to what we manufacture now. I cannot believe that the Members of Congress are more interested in protecting the profits of the manufacturers of poisonous gas than they are in protecting the prospective victims of gas in the next war, whether they be citizens of this country or some European nation."

Un-American Activities

EXTENSION OF REMARKS

RESOLUTION OF THE TRAVELERS PROTECTIVE ASSOCIATION OF AMERICA

Mr. GERLACH. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following resolution adopted by the Travelers Protective Association of America at its annual meeting by the representatives of its 68,000 members, which are variously resident in 33 of the several States of these United States:

Be it resolved by the Travelers Protective Association of America in annual meeting assembled in the city of San Antonio, Tex., June 12–15, 1939, as follows:

1. That we do hereby solemnly reaffirm our unfaltering faith in the American democratic system of government and renew our pledge of allegiance to its wholesome ideals and principles to the end and that there shall never be any infringement upon its basic concepts of a government of the people, by the people, and for the people with equal rights to all and special privileges to none.

2. That we do strongly protest and condemn with all the vigor and strength of our 100-percent, red-blooded Americanism, any so-called un-American activities of certain insidious foreign-born elements in this country who masquerade under the euphemistic names of "communism," "nazi-ism," and "fascism," and the German bunds. These vicious prophets of evil are going up and down our country sowing the seeds of sedition and strife, eating like termites at the very vitals of our national existence.

3. That we believe that the only way back to complete and permanent recovery in business is through soundness and solvency in the administration of the fiscal affairs of our Government, that our National Budget should be balanced and definite steps be promptly taken in that direction.

4. That we declare it to be the sense of this convention that in the event of another European war that this country maintain strict neutrality, and to this end that (1) all American shipping be kept out of war zones; (2) that we sell to belligerent countries all the war munitions and supplies they want to buy on a strictly cash basis, to be carried away in their own ships; and (3) no war loans to any country for war purposes.

5. That we recommend that our immigration laws be made more rigid in order to stem the constantly rising tide of undesirable aliens who recruit the ranks of communism, fascism, and nazi-ism. America should be preserved for Americans. We should first take care of our own 10,000,000 unemployed before others are admitted from foreign shores to add to this already staggering burden; be it further

Resolved, That copies of this resolution be sent to the Members of both Houses of Congress and to the press.

Unanimously adopted at San Antonio, Tex., June 15, 1939.

Georgetown University Convocation

EXTENSION OF REMARKS
OF
HON. EDWARD J. HART
OF NEW JERSEY
IN THE HOUSE OF REPRESENTATIVES
Wednesday, July 12, 1939

ADDRESS BY HON. WILLIAM B. BANKHEAD, SPEAKER OF THE HOUSE OF REPRESENTATIVES, JUNE 3, 1939

Mr. HART. Mr. Speaker, at its convocation of June 3 last Georgetown University honored the Speaker of the House of Representatives and itself by conferring upon the former the honorary degree of doctor of laws. The present

year marks the sesquicentennial of the founding of this great and useful university under the patronage of the able and beloved patriot Archbishop John Carroll. The intervening years had witnessed its steady growth, a continuous expansion of its facilities, and its constantly broadening influence in the life of the Nation.

The address delivered by the Speaker, while brief, is yet a fine example of the purity of diction, rhythmic style, and lofty thought which mark all his public utterances. It is intensely expressive of love for democratic principles and for Georgetown University, of which he is an eminent alumnus.

The speech is as follows:

We have been made conscious within the last year of three great sesquicentennials celebrated by the American people. They are of tremendous significance to the civic and political consciousness of our citizens. I refer to the ratification of the Constitution of the United States, the meeting of the First Congress of the United States under the new Constitution, and the inauguration of Gen. George Washington as first President of the United States.

It is a most happy circumstance that in connection with these immemorial national anniversaries we are privileged to celebrate the one hundred and fiftieth anniversary of the founding of this institution. And as one of its alumni I wish to join all those who love this university and its noble traditions in commemorating the significance of this anniversary.

No government for a great people can hope to survive purely upon political ideology, but there must be coupled with it cultural and spiritual and professional ideals and practices to stabilize the morale of the people—to govern their personal conduct by systems of sound moral ethics, and to teach them that materialistic values are but a portion of the patrimony of a sound and enduring civilization. To the stimulation and encouragement of the better and nobler things of life this great institution for 150 years has contributed efforts of immeasurable value, and I rejoice with you all in memorializing and keeping fresh and fragrant the memories of the great history of this institution and its contribution to the general welfare.

Speaking as a representative of the legislative branch of our Government, I invoke with unrestrained confidence your further cooperation in sustaining in full strength and substance the essence of our democratic institutions, which make men free, free to speak their honest convictions, free to worship their God in such fashion as conscience and conviction may choose without coercion or restraint from any temporal power, free to acquire and bequeath, free to set up their own altars and hearthstones without let or hindrance, free to order their own lives without punitive menace from any quarter, and free to cherish every noble memory that occasions like this inspire.

A New Proposal for American Action

EXTENSION OF REMARKS

OF

HON. JAMES SECCOMBE

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Wednesday, July 12, 1939

ADDRESS BY HON. HERBERT HOOVER, JULY 6, 1939

Mr. SECCOMBE. Mr. Speaker, under leave granted to extend my remarks in the RECORD, I include the following address by Hon. Herbert Hoover before the International Convention of Christian Endeavor Societies at Cleveland, Ohio, July 6, 1939:

I

Last night I spoke on the American Magazine hour against sending our youth to war in foreign countries again. I stated, however, that America can be of service to peace and humanity. Among other things I suggested that we can build up the standards of decency in the world. We can take action which will lessen both the causes and the barbarities of war. We can do it without involving ourselves in foreign wars. I shall make a concrete proposal for such constructive action tonight.

You represent the youth of many nations. And you are profoundly interested in peace. You are profoundly interested in the growth of humane spirit in this world. And if war should come you are interested in all possible protection of humanity in that war.

Last night I referred to the suffering of women and children in the Great War. I know. For years it was my sole occupation to care for the homeless, the foodless, the frightened, and the helpless. I have witnessed their sufferings in 20 nations. And when one speaks to me of war, I do not see the glorious parade of troops marching to the tunes of gay music. I do not think of great statesmen planning and worrying in their chancelries. Nor do I think of those dazzling chambers where the peacemakers of the world meet to settle the affairs of mankind. I see the faces of hungry, despaired, and terrorized women and children. These are the real victims of modern war.

The violence of war is year by year falling more and more horribly upon the civilian populations. Starvation by blockade and killing from the air have become weapons of attack in modern war. At least they have become methods of reprisals. Put bluntly that means wholesale killing of women and children.

The food blockade

Industrial civilization has increased the numbers of people in many countries far beyond their domestic food supplies. They must import food from overseas.

In the last war both sides struggled to bring victory by starvation of the whole enemy people. The food blockade by the Allied Governments on one side and the ruthless submarine warfare by the Central Powers on the other had starvation as a purpose. In the last war both sides professed that it was not their purpose to starve women and children.

But it is only hypocrisy to say that the blockade is directed to starvation of soldiers, munition workers, or government officials. They levy a first call on all food. It is only the deluded who think that these ever starve. Armies and munition workers were not short of food in blockaded Germany in the last war. All over Europe it was the women and children who, weakened from scanty food supplies, died not in hundreds of thousands but in millions. It was the children who grew up stunted in mind and body. Who can say that the confusion in Europe today is not partly the result of the horrible lives of the children of those years?

Death from the air

And in equally dreadful sense I saw a newer method of war develop. The bombing of civilian populations from the air first appeared as a part of war strategy during the Great War. The bombing plans was then scarcely developed. It was a weakling when the Germans used it against British and French cities. But even then I have seen with my own eyes a score of air raids where terrorized women and children flocked to cellars uselessly and frantically to escape a rain of explosives.

No country then possessed great numbers of these planes built purposely for bombing. Today each nation numbers its fleet in thousands. And today each plane will carry 10 times the death-dealing explosives. In terror every European nation is equipping everybody, even the babies, with gas masks. Every country is preparing to evacuate women and children from the cities. One of the dreads of Europe today is that these great fleets of planes will be used to destroy whole cities.

Again it is hypocrisy to say that the sole purpose of bombing planes is to destroy soldiers, communications, and munitions works. That is not the full intention. The purpose is terror and weakening of the morale of the civil population. That means the killing of women, children. The experience in China and Spain in the last 2 years only confirms our worst fears.

II. THE STRATEGY OF MODERN WAR

The ancient chivalry for the protection of women and children has departed in the violence of the times. But why these pressures and terrors against women and children?

To break down the morale and resistance of the civil population at home has become a part of the methods of war. There was a time when wars were carried on exclusively by soldiers and sailors. The civil populations went about their routine daily tasks.

Today war is a battle of whole peoples. They must be mobilized to the last atom of their economic and emotional strength. All fit young men and boys are conscripted and thrust into the battlefields. The pressure on their women and children by the enemy is supposed to react upon the conscripts at the front. It is supposed to weaken their courage and the resolution of these huge armies. Or it is presumed to make the enemy people supplicate its own government for peace.

III. THE MENACE OF INCREASING ARMAMENT

Whether the intention is deliberate direct attack or only a threat of reprisals, this fear for their women and children is one of the driving forces of increased armament by every nation.

One impelling reason for increasing naval fleets given by every country in Europe and Asia is not only to blockade the enemy's food but to keep open the lanes of their own food supplies. Up to the last war the strength in the starvation battle rested with the country which possessed the battleships. But during that war the German submarines demonstrated a capacity to destroy the food supplies destined to England and France, even against their superior fleets. It brought British and French food supplies into extreme jeopardy. Since then the submarine has been greatly improved and its numbers vastly increased.

One of the impelling reasons for unceasing building of bombing planes is to prepare reprisals for blockade starving of women and children or reprisals for air attacks.

This killing of women and children haunts every council table and affects every move of power politics. It drives not alone to armaments. It drives to more and more military alliances that breed war.

Until this menace of killing women and children by food blockade and from the air is removed, there will be little relief from increasing navies and air fleets. There will be little decrease in the fear that is driving the world to its own destruction.

The standard of living, the comfort of all men is today being steadily lowered by this race of armaments. It is the backs of the men and women who toil that carry this load of war preparedness

during peace. It is nonsense to say this is paid for by the rich. The pay comes from the productivity of the people. It is breaking the backs of nations today.

And the United States builds correspondingly to meet the menace of these swelling navies and air fleets.

IV. OBJECTIONS TO LIMITATION OF WAR METHODS

Surely the time has come when men should renounce the starvation and massacre of women and children as methods of war.

I am well aware that any protest or any proposal to limit these horrors in future wars will be decried by the militarists as futile. They will say that the world has tried to do this sort of thing and failed. Civilian authorities in these desperate times may decry it as impractical. It will be said that war is itself immoral and to suggest moral restraint in conducting war is a hopeless contradiction.

Even if nations subscribe to it in peace it will be said there can be no dependable enforcement after war begins. Long reasons will be adduced to support its unenforceability. It will be said that in modern war national existence is at stake. National institutions will be destroyed by the inevitable revolutions that follow to the defeated country. Long years of indemnities and oppression are the penalty of defeat to the vanquished. Therefore, it will be said that despite any agreement to protect women and children, every nation when once engaged in war will justify every weapon as a part of its defense, no matter what their humanitarian agreements may be. I shall comment upon some teeth that could be put into enforcement in a moment.

The old fallacy will be produced that the prospect of war becoming more terrible frightens nations into keeping the peace. But the fact is nations go to war out of desperation at these very threats. The fear of frightfulness does not make for peace. It creates fear, hate, and desperation which drive nations to war. The prospect of killing of women and children makes war more likely.

Another old fallacy will be produced. That is, the more terrible war is, the quicker the sickened nations will make peace. But war has become more terrible every year since the invention of gunpowder. Every half century has seen more and more men sacrificed on the battlefield. It has seen more and more women and children sacrificed at home. Human courage rises far above any terror yet invented.

This same fallacy pretends that putting the screws on the civil population gets war over quicker. Such a policy is thus said to be more humane. The last war proved that starvation and bombing only sharpened hate and hardened resolution to continue.

Even supposing all these arguments are true, are we to accept defeat of international decency? Are we not to try every method, explore every channel that might allay these causes of war and armament and that might lead to protection of the lives and minds of innocent women and children? Must we accept such a collapse of western civilization? Must we accept the despair of return to barbarism?

V. A PROPOSAL

I am going to risk a proposal that might end the worst of it.

My proposal is that all nations who are willing to do so should enter an agreement:

1. That vessels laden solely with food supplies should be placed upon the same basis of immunity as hospital ships. They should go freely. Blockade should not apply to them. There should be no attack upon their passage by either warships or submarines.

2. That there shall be no bombing of civil populations and no bombing anywhere except in the field of actual fighting men on land or sea, and at works devoted strictly to munitions.

Nations who are not willing to enter such obligation will have at least declared their shameful devotion to barbarism. They will be proved outcasts from civilization.

There is humanity in the peoples of all combatant nationalities. Their own public opinion is shocked by barbarities. That is evidenced by the fact that all statesmen in the last war sought to justify such acts to their people as reprisals for the barbarities of the enemy. And through all discussion of preparedness today they find justification in their fears of this frightfulness against themselves.

VI. ENFORCEMENT

Now for the moral teeth that I propose for enforcement. That is the definite participation of neutrals of the world in protection against these barbarities. As a part of such agreement the neutral nations should become the referees announcing in authoritative way any fouls that take place.

To effect this, such agreement should provide further:

3. That the shipment of food supplies in war to any blockaded nation may be in full cargoes under the management and jurisdiction of a commission of the neutral nations.

4. That neutral observers should be continuously in session within every belligerent country to determine the facts of any killing of civilians from the air.

The whole of this enforcement by neutrals must be based upon moral forces and not on military force or entanglement in the controversy. Should any belligerent be convicted of deliberate violations, then neutrals should withdraw. Awful as it may be, no doubt the hells of reprisals from the injured side would then be turned loose.

The real teeth behind this enforcement is public opinion among neutrals. That is one of the most potent forces in modern war. If it be pointed up by definite conviction beyond all the whitewashing of propaganda it can be far-reaching in its consequences.

In the strategy of modern war one of the utmost anxieties of both sides is to hold the good will of neutrals. Or at least to prevent their indignation forcing them to aid or to join the enemy. The ill will of neutrals or their citizens at once induces informal boycotts of credit and supplies even do they go no further. To influence neutral public opinion in the last war every combatant spent millions in gigantic propaganda. And they are spending it again today.

Public opinion in neutral nations does not react much to the legalistic question of whether cotton is contraband or noncontraband. It does not react much to imperial ambitions of combatants. It does not react much to specious circumventions of such instruments as the Kellogg Pact. But it does react to the horror of killing women and children.

It is asserted that public opinion of neutrals had no effect in the last war. Contrary to that, when the final verdict of history is given, it will be found that the losers lost not by lack of valor or courage. They lost not by lack of efficiency or even from starvation. They lost by failure to heed the public opinion of what were originally neutral nations. Had the American sense of humanities not been outraged over years, there is little likelihood that we would have joined in that war. And with us half a dozen hitherto neutral nations joined also. The emotional reaction of the American people upon a conviction of wholesale killing of women and children in another great war would come nearer to driving our people to intervention than all the other arguments in the world.

If this moral standard of protection to women and children were once erected in the world the violators could confidently expect that the indignation of neutrals would bring them to disaster.

VII. SOME EXPERIENCE

Incidentally, on Armistice Day in 1929, I made the part of this proposal relating to the immunity of food ships. It was approved by the leaders in a score of nations. Those nations who did not regard it with favor thought it one-sided. But they now find themselves hideously menaced from the air. The double proposal should now commend itself to those who then thought it one-sided.

In 1932 I proposed to the World Conference on Land Disarmament a limitation on the use of bombing planes which was accepted by the representatives of many nations. I did not then propose enforcement through organized neutral action as I now do.

To those who doubt the practicability of the idea of ships moving through blockades, I may point out that the Belgian Relief Commission delivered more than 2,000 full cargoes of food through two rings of blockade. It was done by international agreement under neutral management operating continuously for more than 4 years. It proved that this could be done.

Moreover, the conventions as to the Red Cross were fairly well held to in the civilized countries during 1914 to 1919. The agreements as to protection of prisoners were also fairly well held. At least some agreements to mitigate barbarity have been kept in war. These growths away from barbarism lend hope for further progress toward protection to women and children.

If we wish to lower our vision from the transcendent questions of humanity involved, we can find an impelling interest to neutrals in these proposals.

In the last war the blockade initially reduced demand and every farmer in the world suffered. Then as the long lanes of food from the Southern Hemisphere could not be used because of diminished shipping and the submarine, the demand was concentrated on North America. And the farmers of the Southern Hemisphere went bankrupt during the war. Perhaps someone thinks our farmer benefited. He did not. He has for years and is today still suffering from the expansion of submarginal lands and the inflation of land values due to the high prices of the war.

VIII. CONCLUSION

Today's is perhaps a poor atmosphere to make any proposal to mitigate the barbarities of war. So many are desperate with fear, so many have learned to hate. So much hatred and fear are being stimulated by the artifices of propaganda.

It is true the processes which lessened the causes of war and made for peace have been greatly weakened. It is a tragic fact that in 6 years the treaties limiting the navies have been abandoned. The hopeful negotiations to limit land arms have died away. Encouraging international action by the world conference to restore the prosperity of the world was suppressed. Nations have lawlessly violated their pledges never to use war as an instrument of national policies. Every large nation is arming to the teeth. The standards of living all over the world are being lowered to pay for increasing arms. Fear is rampant. The only methods of peace today seem to be military alliances, threats of force, and delicate balances of armed power.

All this may seem discouraging. But there are times when to relift the banner of moral standards is essential. For unless it is raised there will be no morals. Because hate and violence have arisen in men is no excuse that we shall forsake reason and humanity.

For America to voice these ideas on behalf of women and children requires no use of force. It needs no military alliances, no leagues, no sanctions. It requires no power politics. But that voice when raised on behalf of humanity can be a most potent force in the world today.

We possess a great moral power, and we should use it to save mankind from the barbarities of war. Thereby we will promote peace. In this we will be right at all times.

Thoughts on Temporary National Economics Committee Legislation

EXTENSION OF REMARKS

OF

HON. FRED L. CRAWFORD

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Wednesday, July 12, 1939

EDITORIAL FROM THE NEW YORK TIMES

Mr. CRAWFORD. Mr. Speaker, in view of the extraordinary amount of money which is being spent by the Temporary National Economics Committee, together with the far-reaching consequences of the study which it is making and perhaps the revolutionary legislation which will be recommended by the committee after it has concluded its research, I desire to present for the information of the House the following editorial from the New York Times:

[From the New York Times]

THE O'MAHONEY BILL

When the Temporary National Economic Committee was formed it was widely advertised as a body that would examine the problem of monopoly with an open mind and give all interests an opportunity to be heard. For a time it seemed to be actually following that course, but in recent months its hearings have had too often the air of staged performances. It has listened to carefully prepared testimony of administration officials or of its own members, putting forward various economic schemes or making various charges against the conduct of this or that industry, and before the representatives of one industry have had an opportunity to muster their evidence or reply to the charges, the committee has been off on another tack, "exploring" some other phase of economic life.

Several recent developments increase the suspicion that the committee has made up its mind on some of its most important conclusions before listening to the evidence. A few days ago, for example, Chairman O'MAHONEY introduced a highly questionable bill to allow the United States Government itself to sue a corporation violating the antitrust laws for civil penalties. The corporation would be made liable to forfeit to the Government a sum equal to twice its total net income during every month in which the alleged violation occurred, and every officer and director of the corporation who had participated in the violation would be made personally liable to forfeit a sum equal to twice his compensation from the corporation for every month during which the violation occurred.

As the Government might win verdicts that certain "violations" had been going on for years, it is obvious that such excessive penalties could not merely personally ruin the officers of corporations but force great corporations themselves completely out of business. As the antitrust laws have always been very vague in their outlines, as such crucial phrases as "restraint of trade" are subject to the broadest sort of interpretation, such a law might place inordinate powers in the hands of officials of the Department of Justice, and intimidate business in a very serious way.

Yet though the public did not even hear of Senator O'MAHONEY's proposal until a few days ago, it is already made known that the T. N. E. C. will endorse that proposal in its preliminary report, which is expected within the next 10 days. Meanwhile there will be no adequate opportunity for the public to sift the merits of so important a measure. It is ironic to recall that it was to the T. N. E. C. that the President addressed his recent question of how to get idle men, idle machines, and idle money back to work. There is no more certain device for frightening money into continued idleness, and consequently for keeping both machines and men idle, than by imposing on business drastically excessive penalties for vaguely defined legal violations.

Mixed Neutrality

EXTENSION OF REMARKS

OF

HON. CHARLES A. PLUMLEY

OF VERMONT

IN THE HOUSE OF REPRESENTATIVES

Wednesday, July 12, 1939

Mr. PLUMLEY. Mr. Speaker, if the position of this country should be endangered in the immediate future by any conflagration, any incipient war brewing among the European nations of such moment and so portentous as to necessitate the United States to engage indirectly therein by providing arms, munitions, implements, and sinews of war to one side or the other—and it is this denial of direct opportunity to take sides even under present conditions which seemingly has led so many to inveigh so heartily against the action of the Senate committee whereby it postponed Neutrality Act revision until the Congress meets again—action which, it should be borne in mind, affirms the action recently taken by the minority of the House membership when it voted on the same Neutrality Act—when, as, and if such a situation should obtain among the nations of Europe as would endanger us, it would seem not only responsive to reason but of paramount, transcendent importance that "the voice of the people"—the Congress of the United States—should be called into immediate session thus accurately to reflect the intimate reactions of the people to any danger which might conceivably threaten them from without.

The Congress, being in session as it should be under such circumstances, could then enact such legislation as the temper of the times and the then existing situation might demand. Moreover, it should not be overlooked that in these days the Congress can be called into immediate session with negligible delay. As the perspicacious correspondent of the New York Times, Arthur Krock, today takes occasion to say:

A special session of Congress can in these days be assembled rapidly and public opinion formed by such events as listed above presumably would force speedy action.

You should read this entire article by Mr. Krock. It gives a clear, keen, penetrating picture of the Washington temper as well as a concise summary of the problem which has been so widely discussed and so ably debated these past few weeks. So that you may do so, I incorporate the article in my remarks at this point.

He says:

The struggle in Congress over the administration's proposals to revise war-policy legislation has been so thoroughly dramatized by politics that "joy in Berlin and Rome" is a natural consequence of the Senate committee's action today in shelving revision for the remainder of this session. The dictators and governments on the axis are entitled to their hour of joy. But before they proceed to base any dynamic policy on what has happened here they would be well advised to obtain a sound analysis of the reasons.

Some of these reasons are:

(1) Distrust in Congress of the fourth New Deal's foreign section on two grounds: (a) The political fear that to sustain it would give the President additional powers on the threshold of a national election, and (b) the temperamental fear that Mr. Roosevelt might not wisely use the power to arm one set of belligerents against another.

(2) Conviction among a majority of the Members of Congress that the people of the United States favor a negative foreign policy as long as it can be maintained, and, in the preface of war, want no allies.

(3) Historic lack of concern over the European situation because of the repeated settlement of recent crises; the buoyancy of the British "appeasement" faction; the war-debt defaults; and the congenital American suspicion that European nations seek only to exploit the United States.

But most improbably did two other considerations enter into the action of the Senate Foreign Affairs Committee today. These are (1) the attempt of the inner circle new dealers to defeat for renomination Senators GEORGE and GILLETTE, who voted today with the committee majority after having been represented as undecided; and (2) any belief in Congress that if the axis powers start a war abroad, this country will be neutral in spirit, indifferent to the fate of France or Great Britain or actually sympathetic with Hitler and Mussolini.

ABOUT FACE COULD BE SPEEDY

If the authorities in Berlin or Rome are told either of these two things, particularly the second, and if they should believe such reports, they would do well to recheck their information. Any change in policy based on this presumption or belief faces the same consequences as those which followed the German procedure in 1914 when the Kaiser was assured Great Britain would not join the war. At a special session called on the outbreak of European war, or during a regular session punctuated by war and air attacks on nonaxis cities, many of the Members of Congress who have voted recently to keep down the President's powers in wartime would quickly reverse themselves.

A special session of Congress can in these days be assembled rapidly, and public opinion formed by such events as listed above presumably would force speedy action in an opposite direction. During a regular session Presidential discretionary war powers could be voted even more speedily.

Had Mr. Roosevelt, beginning with the Chicago "quarantine" speech in 1937, pursued a less aggressive verbal foreign policy, and had he refrained from certain alarmist statements implying the extreme probability of war, it is probable Congress would have acceded to his request and abolished the wartime arms embargo. Had he some time ago made it wholly clear he will not seek a third Presidential nomination instead of suffering the contrary suspicion to be planted and daily watered, that probability would have been even greater. These are the plain facts of the situation, rarely conceded in congressional speeches, but strongly influencing neutrality legislation. Yet this observer is far from solitary in the conclusion that the actuality of war in Europe would sweep even these aside.

SHARING THE RESPONSIBILITY

If the war prospect in Europe is as acute as the President and his chief foreign-policy advisers appear to believe it is, and if the "joy in Berlin and Rome" over the action of the Senate committee today induces the dictators to precipitate that war, the responsibility on this side of the ocean will not be wholly that of Congress by any means. Its majority is isolationist. This majority disbelieves in the estimate of a much better informed observer, the President. It also rejects his sound thesis that material notice to the dictators in advance that we will arm the French and the British will serve as a preventive of war. In these particulars the Congress majority must accept a share of the responsibility for any disastrous results of the Senate committee's postponement vote today.

But to the extent that the President's tactics have fed the isolationist sentiment, encouraged disbelief in the gravity and imminence of the war crisis, aroused the fear and suspicion of his political foes, and made it possible for demagogues to pull out all the stops on the organ of American aloofness, he must be assessed with what, if anything, flows from today's vote should Congress adjourn without upsetting its mandate. It is this sort of contest, with blood and treasure and civilization as its possible stakes, which fosters the wish that some legal means could be found to limit Presidential successions; some magic be devised to put foreign and domestic politics into separate compartments, and to touch with celestial spirit and vision all public persons who deal with the issues of war and peace.

Independence Day Ceremonies

EXTENSION OF REMARKS

OF

HON. MARTIN J. KENNEDY

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Wednesday, July 12, 1939

ADDRESS BY REAR ADMIRAL CLARK H. WOODWARD, UNITED STATES NAVY

Mr. MARTIN J. KENNEDY. Mr. Speaker, each year this celebration is sponsored by the Society of Tammany and is the outstanding patriotic celebration of its kind in the United States. On the occasion of this celebration we find assembled outstanding figures in the religious, civic, military, and public life of the community paying tribute to the Society of Tammany, in addition to their brilliant speeches on the traditions of Independence Day and the patriotism of our people. This year, before a large and enthusiastic audience, the following address was delivered by one of our distinguished naval officers.

ADDRESS BY REAR ADMIRAL CLARK H. WOODWARD, UNITED STATES NAVY

Worthy Grand Sachem, distinguished guests, friends, I feel greatly honored at being invited to participate again this year in the Independence Day ceremonies of your patriotic and fraternal organization. Though our ceremonies tonight are a few days in advance of the Glorious Fourth, they lack none of the patriotic fervor to be exhibited on that day of days.

This is the season of patriotic celebrations, reminding us of the wonderful achievements of our forefathers and of the great heritage they left for us to enjoy.

Two weeks age we celebrated the one hundred and sixty-second anniversary of the official adoption by the Continental Congress of our national flag—that glorious banner of 13 stripes, straight and true, with a field of 13 stars representing the new constellation in the galaxy of nations. In the fabric of that flag is woven the saga of the greatest political experiment ever made by man.

Next Tuesday, throughout the length and breadth of the United States, and in all other places where Old Glory flies, our fellow citizens will celebrate the one hundred and sixty-third anniversary of our independence—when our forefathers cast off the foreign tyrannical yoke that had borne so heavily upon them; when they established this democratic union which has stood for six generations and endured through the acid test of its various wars from Valley Forge to Chateau Thierry, including a war between the States.

I shall not at this time review the patriotic actions of our forebears in the days of 1776, as glorious as they were, but shall speak more pertinently of our present-day obligations as loyal American citizens.

Harking back to Flag Day, it is unfortunate that we are not more definitely flag-conscious in this country. The American flag is not seen as often as it might be nor, when seen, honored as ceremoniously as it should be. We frequently pass beneath it without even an upward glance at its bright colors. We take it too much for granted without realizing for what it stands. With foreign flags and symbols all around us it is fitting and proper that our people should have a day each year to glorify our flag and be reminded of its protecting power throughout the world.

It is the emblem of this country's majesty and sovereignty and the living symbol of the will to be free as an indestructible union of indestructible self-governing States. It can never mean more than we make it mean. Through our Federal Constitution Old Glory proclaims the principles of freedom, justice, and equality of opportunity under the law, and symbolizes the enjoyment of a happy life with liberty and tolerance.

It belongs to no political party, class, or creed, and stands for no oppressive "ism." What it does stand for is true Americanism, a united country, and a protective democratic government of the people, for the people, and by the people. It is a battle flag of freedom which must be fought for and rededicated day by day in order to preserve our hard-fought-for liberty. There is no room beneath its folds for those who would overthrow our traditional self-government in which we still have abiding faith.

In all the wars in which our country has engaged in its 163 years of existence our soldiers and sailors have saluted death unafraid, exalted by an inexpressible feeling that they were fighting under that flag and in defense of our liberties in order that our country might become a free and independent nation, continue as an inseparable union, and remain deaf to the siren songs of Old World alliances.

The ranks of our veterans are growing thinner as the years pass, but those who remained after each conflict have been a constant reminder to succeeding generations of those qualities of honor, courage, and sacrifice which not only kept our country united but made this Nation great.

That the youth of yesterday emulated their example of loyalty, devotion to duty, and patriotism was shown in the Spanish-American War, Philippine Insurrection, Boxer campaign, and World War. And should we be plunged into another conflict, I am confident that the same spirit of self-abnegation induced by love of country would guide the youth of tomorrow—even though now subjected to all sorts of subversive propaganda, false philosophies, and imported un-American "isms."

As we all know, there are many organizations masquerading under the name of "peace" societies and other innocuous-sounding titles that are making vicious effort to weaken our common defense, demoralize our general welfare, and destroy our domestic tranquillity by spreading antipreparedness-propaganda seeds throughout our country, taking advantage of the fertile soil our country so innocently provides. There are other more dangerous, unmoral, and treasonable organizations, conducted for foreign interests, that are deliberately attempting to mislead on-the-fence patriots and mold public opinion in favor of their inherently selfish antidemocratic ideologies—whose deplorable excesses have brought serious adversity and even political chaos to other lands—with the unalterable intention of undermining our entire social structure and ultimately overthrowing our form of government, by force if necessary.

The Communists, as we have seen recently, are even making a brazen pretense at whitewashing their "red" aims by their newly adopted constitution. This phony blind constitutes a fresh menace to indifferent and misinformed patriots, for after all it is still a revolutionary party carrying on its work as before and using its new constitution as the gold brick "come on" to fool the public.

Their promise of greater liberty, justice, and freedom is only a catch phrase to which their own fundamental negation of liberty, justice, and freedom puts the lie. Their guarantee of private rights and civil liberties has been proved to be a colorful myth. The "red" dictatorship is nothing but the old tyranny aggrandized and those of the Fascists and Nazis—being built on similar foundations—follow closely in its wake with their oppression and usurpation of power and suppression of the individual in favor of the state while pretending to glorify collectivism.

It is these alien "isms" particularly and all other unfriendly influences in our midst which seek our ruin that all loyal Americans should unceasingly combat by building up the patriotic character of our rising generations. What are we, as citizens of this great country, doing to encourage the proper training of the young men of today to prepare themselves as replacements for the present national defenders? Are we to permit these alien subverters who threaten our most cherished fundamental ideals and proudest heritage from the past to work freely in our land?

Let us be neither fools nor cowards by sitting idly by and showing apathetic indifference to these publicized borings from within and secret attacks from abroad by more subtle forms of intrigue and political espionage on our free institutions and liberties. Facing the facts, as all true patriots should do, we must stand like

the Minutemen of 1776, ready to combat these doctrines of evil. The warning signal of great danger has been sounded.

Veterans of past wars, by their loyalty and devoted service, have demonstrated their conviction that American citizenship carries with it obligations as well as privileges. Upon the men of today rests the obligation of enlightening the youth of our country, by precept and example, in the duties and high character of American citizenship—remembering that it was American principles that made us a great and prosperous Nation. The freedom we have was hard fought for, but may easily be lost.

The overthrow of all democratic and free institutions in the past has taken place primarily because of the inertia of the people. By the same token it can happen here, despite our feeling of security.

It has been truly said, "Liberty is born of war and can be maintained only by war." Former President Coolidge summed up the thought in these words:

"We have come into our present high estate through trial and suffering and sacrifice. That which was required to produce the present standards of society will ever be required for their maintenance. Unless there is an eternal readiness to respond with the same faith, the same courage, and the same devotion in the defense of our institutions which were exhibited in their establishment, we shall be dispossessed and others of sterner fiber will seize on our inheritance."

What do we find today? Radical immigrants coming to America to avoid the tyranny and oppression of the countries of their birth; instead of following in the footsteps of those earlier immigrants who cast in their lot with the founders of this country in an effort to make it the haven of liberty, justice, and freedom it is today, on arrival here these later immigrants not only become critical of the land which gives them asylum and of its institutions, but even combine through Trojan horse tactics in a sinister attempt to destroy the very Government which gives them protection and convert it into the same type of despotic government from which they recently fled.

Americans should not stand for this much longer. These subversive elements are destroying the moral fiber of the country's old and young alike. We must gird for battle to save American youth.

What we need today is more of that good, old-fashioned, honest-to-goodness patriotism—the kind that gives a tug at the heartstrings and makes a person feel proud to be a citizen of these United States, the greatest country on earth; the kind that gives us an internal glow when we see our flag waving on high; the kind that inspires us when we hear the national anthem.

Unfortunately, however, in this day of so-called advanced thinking, this brand of patriotism has been somewhat outmoded in too many of our educational institutions by intellectual anarchists teaching the theories of internationalism or of alien ideologies, and fostering the subversive movement of nonparticipation in war. Such traducing of our schools and colleges by malicious agents of un-American "isms" must be stopped by the challenge of patriotic groups cooperating in a crusade to save America for Americans.

No nation can rise above the concept its citizens have of patriotism, and when a country reaches the point where its people have no faith or confidence in it, that country is surely on the toboggan slide to decadence. That has been the history of other nations in the past which have lost national spirit. And history has a sad way of repeating itself.

In view of all this, recent events here in New York City and in other communities throughout the country have been very heartening. On Sunday last a most impressive and historic ceremony was held under the auspices of various patriotic organizations. It was the observance of citizenship day in honor of American-born youth who became of age during the past year.

The ceremonies, which included the oath of good citizenship, were arranged to impress upon them the great significance of their new status and to emphasize the value of their heritage in our great democracy. It is upon these citizens and future generations that the continuance of democracy in this country depends.

Having thus attained the full stature of citizenship, they should now be ready and willing to fulfill their duty toward society in general and themselves in particular by exercising the precious rights of an American citizen. No gift can be conferred by this Nation on any person greater than that of citizenship. No declaration can mean or imply more than that simple phrase "I am an American."

Those who have attained this high estate, however, must realize that with the privilege of citizenship goes the solemn obligation to uphold American ideals of freedom and democracy and to protect and preserve the Nation from enemies both within and beyond our gates.

It is this latter obligation that I desire particularly to emphasize this evening. If we are to save this country from the dire fate of certain European nations, it is incumbent on all good citizens to pledge allegiance to the only true "ism"—Americanism—and help patriotically to preserve the principles of our democratic institutions and the ideals of our great system of government.

The solemn civic duty with which we are charged includes the teaching of the youth of today to support the American system of government, the American Constitution, American institutions and ideals, and guard vigilantly American principles against assaults of whatever character or from whatever source. The American system of government has given to its people the greatest prosperity, happiness, individual freedom, and social security known to the world, its one great weakness being the inability to stamp out quickly subversive doctrines and deal promptly and effectively with those who are seeking to overthrow the Government by force.

One of the favorite targets of attack by those who scoff at patriotism is the question of national defense on the wholly false premise that the existence of an army and navy is a potent cause of war. Yet our own history shows that no one of the six major conflicts in which we have engaged in our 163 years of national life was caused by the existence of our armed forces. Quite to the contrary, each war found us utterly unprepared both on the land and on sea.

It cannot be too often repeated that our Army and Navy do not exist for waging war but for the purpose of preserving peace. We who have experienced war, knowing too well its horrors and suffering, hate war. We do not have even a voice in the declaration of war. This is decided wholly by the civil authorities, and the armed forces are called in only after all efforts for peace are exhausted. It is then that the Nation's defenders carry out the mandate of the people.

Being the first to suffer and to die, we of the regular armed forces of the country enthusiastically join our civilian brothers in the hope for perpetual peace. However, we realize the impossibility of such an ideal condition in this war-torn world, particularly now when strong predatory nations, arming to the teeth, and regardless of treaties, are ruthlessly attacking and annexing territory of weaker neighbors in their lust for greater power—though making the hypocritical diplomatic claim of promoting mutual friendly cooperation, prosperity, and public welfare thereby. Furthermore, the systematic and purposeful propaganda of certain foreign nations in spreading their aggressive political activities in Central and South America is a growing challenge to the influence of the United States which undoubtedly, if continued or increased, will menace the preservation of peace as our Monroe Doctrine—in the support of which we have never wavered—views any attempt of foreign powers to colonize or extend their political system to this hemisphere as being dangerous to the peace and safety of the United States.

In consequence, prudence dictates a realistic preparedness against all eventualities, which for the United States means nothing less than a "Navy second to none" and a well-equipped efficient Army of sufficient size to defend our land. Our main reliance, however, will never be—as it always has been in the past—on that great body of patriotic citizens who enroll under our glorious flag when the country is in danger. After all, war—whether it be against crime, communism, or another nation—can never be more effective than the preparations made in advance to conduct it. All social order depends, eventually, on force.

Today 80 percent of the world—comparatively weak and disorganized—are terrorized by the other organized, strong, and predatory 20 percent.

Daniel Webster once said "God grants liberty only to those who love it, and are always ready to guard and defend it." Therefore, let us take as our slogan: "On guard America—Now."

By valor and virtue let us, as patriotic American citizens, forever stand firm and loyal to God, country, and flag.

The Wagner Health Bill

EXTENSION OF REMARKS

OF

HON. LELAND M. FORD

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, July 12, 1939

Mr. LELAND M. FORD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following resolutions adopted by the California Medical Association:

Whereas a proposed Federal law, submitted by United States Senator ROBERT F. WAGNER, of New York, and known as the Wagner health bill (S. 1620) is now being considered in Senate committee hearings at Washington, D. C.; and

Whereas S. 1620, if enacted into law, would introduce such radical changes in the public health set-up of the Federal and State governments, as well as in curative medical practice, that a real menace would be created to the public health interests of United States citizens, as well as to medical practice standards as now constituted, and also to the ancillary hospital and other services associated in preventive and curative medicine; and

Whereas the existing plan of medical practice, based as it is on a merit system of competitive practice, free from all political domination and paternalism, has been largely responsible for making it possible for the United States and its federated Commonwealths to show the lowest morbidity and mortality rates among civilized nations: Now, therefore, be it

Resolved by the California Medical Association, through its council, That the California Representatives in the United States Senate and House of Representatives, be requested to use their best endeavors to prevent the passage of S. 1620, and of proposed laws of analogous nature, such as the amendments to H. R. 6635 proposed by Senator WAGNER.

Samuel Davis McReynolds

EXTENSION OF REMARKS
OF
HON. CHARLES A. PLUMLEY
OF VERMONT
IN THE HOUSE OF REPRESENTATIVES
Wednesday, July 12, 1939

Mr. PLUMLEY. Mr. Speaker, I realize full well that I can add nothing to the deserved tributes which have been so eloquently paid to my friend SAMUEL D. MCREYNOLDS.

My inclination at this time is to say nothing, for words fail me when I undertake to measure with them the grief I feel at his passing. I fear, however, he might not understand why his old friend did not say something, for our friendship was intimate and close, and of long standing. Those of you who did not know him must appreciate from what has been said, and truly, that it was both a privilege and an honor to have been permitted to enjoy the confidence and friendship of such a man.

With no fulsomeness, I can say that no man I ever knew was more justly entitled to or so sure of hearing the plaudit:

Well done, thou good and faithful servant; thou hast been faithful over a few things, I will make the ruler over many things: enter thou into the joy of thy Lord.

Hail and farewell, my friend, we shall not forget you. We shall lay your mortal remains at the foot of the mountains you loved, and from whence you came, and in the soil of which you were an integrant part; for you belong within those borders bounded by mountain-high horizons. You were typical of the mountains and the hills and the valleys of Tennessee, and you shall sleep among them; and "at home." And I know, my friend, that somewhere, sometime, we shall meet again—

When the blue hills grow tender, when they pull
The twilight close with gesture beautiful,
And shadows are their garments, and the air
Deepens, and the wild veery is at prayer
* * * I know
That somehow, sometime, I shall follow
to the still land beyond the evening star,
where everlasting hills and valleys are,
And silence may not hurt us any more,
And terror shall be past, and grief, and war!

William Ben Cravens

MEMORIAL ADDRESS
OF
HON. JOHN H. KERR
OF NORTH CAROLINA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, May 30, 1939

On the life, character, and public service of Hon. WILLIAM BEN CRAVENS, late a Representative from the State of Arkansas

Mr. KERR. Mr. Speaker, the assembled House of Representatives is in no sense the place to make social contacts or a place to form a just estimate of the character, real ability, and fidelity of its membership. We meet, discuss measures calendared for legislation, and hear debates often not germane to the subject matter under consideration. If this was the only opportunity the Members had to form a just estimate of our colleagues, I fear most of us would go home wondering why our constituents sent us to be their representatives in the greatest legislative body on earth.

Fortunately for us and our country we do get an opportunity to know each other when we come to consider all legislation before our several committees, and every Member of Congress, if he remains in Congress for several terms, will at some time have some intimate contact with his fellow Members which unfolds the character and viewpoint of each Member and it enables us to separate the gold from the dross. Seldom are we disappointed and those revelations lead me to assert that no more patriotic or diligent body of men could assemble on this earth to legislate for a Nation than those who from session to session compose the membership of the House of Representatives. It is possible, of course, to have a few unworthy men in such a body, but in this body these men are few and an exception to the rule, and it clearly evinces the fact that the people from every section of the Nation can be relied upon to choose a representative here and these representatives do and should reflect the ideals of their constitutency and pay tribute to their universal high moral conception of citizenship and love of country.

I wish to pay a last tribute to my fellow colleague and friend, Hon. BEN CRAVENS, of Arkansas, who died in the city of Washington recently and who represented the Fourth Congressional District of that State. Mr. CRAVENS had for many years been chosen to perform public duties in his native State. He was the prosecuting attorney of the Twelfth Judicial District of Arkansas for three terms and was elected Member of Congress in 1907, and served three terms. He was not a candidate then for reelection, but ran again in 1932 and was elected to the Seventy-third, Seventy-fourth, Seventy-fifth, and Seventy-sixth Congresses. The fact that Mr. CRAVENS could remain out of Congress for 10 years and then be reelected is a most unusual incident in the life of any public man and this fact, if we had no other measure to go by, clearly discloses the high esteem in which he was held by the people among whom he lived.

As a public official he served his people with the deepest loyalty and unselfish affection and if he was a partisan, it was because the history of his party convinced him of its correct theory of government, but he was never so partisan that he would sacrifice the love of his country upon the altar of partisanship. He was a wise man, an able and discreet lawyer, a brave and courageous representative of a great people. I learned to admire his fine qualities after an intimate association with him on an important committee and I shall cherish as long as I live the mutual friendship we enjoyed for a few years and I hope to renew this friendship when I, too, shall cross "the Unknown River to the Unseen Shores."

Mr. CRAVENS lived in an eventful period of the Nation's history. He was born in the section of the country which was humiliated by defeat and when poverty was universal in our Southland. He grew to manhood and with his growth overcame all obstacles and emerged a wise leader, and able official and a valuable citizen. Men of his generation and his type from his section of the country overcame obstacles which few men encounter in life and made anew the social, financial, and political prominence of the South.

In the 15 years of my membership in this body, no State in this Union has sent to both Houses of Congress a more able, diligent, and conscientious membership than Arkansas, and BEN CRAVENS, our deceased colleague, deserves to rank among the outstanding ones.
